

Resilient Hampton Initiative | Downtown Hampton, Phoebus & Buckroe Design Workshop

LOCATION

Fort Monroe Community Center Multipurpose Room, 100 Stilwell Road, Hampton, VA 23651

PURPOSE

Building upon Phase I of Resilient Hampton and the Newmarket Creek Water Plan, completed in 2021, the Downtown Hampton, Phoebus, and Buckroe Water Plan will be a strategic plan for the future resiliency of these Hampton neighborhoods, organized around watersheds, rivers, and shorelines. Working at multiple scales – from watershed, to district, to neighborhood, to parcel – the plan will identify, prioritize, and recommend project opportunities aligned with Resilient Hampton’s values, goals, and guiding principles.

Waggonner & Ball, working together with the City of Hampton, has identified and synthesized local conditions, ongoing urban and infrastructure planning and development efforts, and community input on assets and challenges in these areas of the City. During this design workshop, working together with key stakeholders and the community, the team will identify strategic approaches to resilient design to implement in the study areas, and develop initial project concepts to present in the final plan.

AGENDA

Monday, 16 May 2022

1:30pm - 5:00pm

Design Workshop Kick-Off

The project team – City of Hampton, Waggonner & Ball, and Moffatt & Nichol – will orient stakeholders to the water planning process and provide an overview of what the team hopes to accomplish through the workshop. This will include a presentation of data collection, analysis, and community feedback collected to date, and identified opportunities to implement the suite of resilient design strategies (slow, store, redirect, adapt, buffer and protect) throughout the geographic study areas. Working together, the group will refine these “big picture ideas” for the plan, and review and prioritize project sites. The resulting prioritized sites will become the focus of design work sessions on Tuesday and Wednesday.

Tuesday, 17 May 2022

10:30am - 12:30pm

Work Session #1: Downtown Hampton

Building on project sites and strategies identified during the design workshop kick-off, the team will develop high-level conceptual designs for project implementation. This session will focus on identified projects in the Downtown Hampton neighborhoods. Stakeholders are invited to return to contribute to concept design.

**WAGGONNER
& BALL**

1:30 – 3:30pm

Work Session #2: Phoebus

Building on project sites and strategies identified during the design workshop kick-off, the team will develop high-level conceptual designs for project implementation. This session will focus on identified projects in the Phoebus neighborhood. Stakeholders are invited to return to contribute to concept design.

Wednesday, 18 May 2022

10:30am - 12:30pm

Work Session #3: Buckroe

Building on project sites and strategies identified during the design workshop kick-off, the team will develop high-level conceptual designs for project implementation. This session will focus on identified projects in the Buckroe neighborhood. Stakeholders are invited to return to contribute to concept design.

6:30pm – 8:00pm

Community Meeting: Gallery Walk & Discussion
(Location To Be Determined)

The project team will share identified strategies and conceptual drawings with a broad audience for input. The meeting will begin with a brief presentation to the water plan and the design workshop process. The project team will orient attendees to the layout of the gallery walk, and will request that participants consider and provide feedback on the strategies and concepts developed. Participants will then be invited to learn more about the designs by circulating through the room, where they will have a chance to speak with the project team, provide input, and engage in discussion. The results of this meeting will be used to adjust and refine strategies and projects.
