ALTA/NSPS LAND TITLE SURVEY

CITY OF HAMPTON, VIRGINIA

SCHEDULE B, PART II - EXCEPTIONS

THIS COMMITMENT DOES NOT REPUBLISH ANY COVENANT, CONDITION, RESTRICTION, OR, LIMITATION CONTAINED IN ANY DOCUMENT REFERRED TO IN THIS COMMITMENT TO THE EXTENT THAT THE SPECIFIC COVENANT, CONDITION, RESTRICTION, OR LIMITATION VIOLATES STATE OR FEDERAL LAW BASED ON RACE, COLOR, RELIGION, SEX, SEXUAL ORIENTATION, GENDER IDENTITY, HANDICAP, FAMILIAL STATUS, OR NATIONAL ORIGIN.

THE POLICY WILL NOT INSURE AGAINST LOSS OR DAMAGE RESULTING FROM THE TERMS AND CONDITIONS OF ANY LEASE OR EASEMENT IDENTIFIED IN SCHEDULE A, AND WILL INCLUDE THE FOLLOWING EXCEPTIONS UNLESS CLEARED TO THE SATISFACTION OF THE COMPANY:

1. *ANY DEFECT, LIEN, ENCUMBRANCE, ADVERSE CLAIM, OR OTHER MATTER THAT APPEARS FOR THE FIRST TIME IN THE PUBLIC RECORDS OR IS CREATED, ATTACHES, OR IS DISCLOSED BETWEEN THE COMMITMENT DATE AND THE DATE ON WHICH ALL OF THE SCHEDULE B, PART I-REQUIREMENTS ARE MET. (NOT A SURVEY MATTER)*
2. *RIGHTS OR CLAIMS OF PARTIES IN POSSESSION NOT SHOWN BY THE PUBLIC RECORDS. (NOT A SURVEY MATTER)*
3. *EASEMENTS, OR CLAIMS OF EASEMENTS, NOT SHOWN BY THE PUBLIC RECORDS. (NOT A SURVEY MATTER)*
4. *ENCROACHMENTS, OVERLAPS, BOUNDARY LINE DISPUTES, OR OTHER MATTERS WHICH WOULD BE DISCLOSED BY AN ACCURATE SURVEY OR INSPECTION OF THE LAND. (MATTERS, IF ANY, ARE SHOWN HEREON. NOT ALL POTENTIAL ISSUES ARE SURVEY MATTERS.)*
5. *ANY LIEN, OR RIGHT TO A LIEN, FOR SERVICES, LABOR, OR MATERIAL HERETOFORE OR HEREAFTER FURNISHED, IMPOSED BY LAW AND NOT SHOWN ON THE PUBLIC RECORDS. (NOT A SURVEY MATTER)*
6. *TAXES OR SPECIAL ASSESSMENTS WHICH ARE NOT SHOWN AS EXISTING LIENS BY THE PUBLIC RECORDS. (NOT A SURVEY MATTER)*
7. *REAL ESTATE TAXES FOR THE SECOND HALF OF THE FISCAL YEAR 2023/2024, AND SUBSEQUENT YEARS, NOT YET DUE AND PAYABLE. (NOT A SURVEY MATTER)*
8. *STORM WATER ASSESSMENTS, NOT YET DUE AND PAYABLE. (NOT A SURVEY MATTER)*
9. *EASEMENT TO VIRGINIA ELECTRIC AND POWER COMPANY RECORDED IN INSTRUMENT NO. 160000618. NOTE: EASEMENT WAS SIGNED BY MAUDE S. AGNEW, ALSO KNOWN AS MAUDE S. JUDKINS AND SHE ONLY HAD A LIFE ESTATE. (AFFECTS THE PROPERTY AS SHOWN HEREON)*
10. *EASEMENT TO VIRGINIA ELECTRIC AND POWER COMPANY RECORDED IN INSTRUMENT NO. 160007350. NOTE: EASEMENT WAS SIGNED BY MAUDE S. AGNEW, ALSO KNOWN AS MAUDE S. JUDKINS AND SHE ONLY HAD A LIFE ESTATE. (AFFECTS THE PROPERTY AS SHOWN HEREON)*
11. *SUCH STATE OF FACTS AS SHOWN ON THE PLAT RECORDED WITH DEED IN DEED BOOK 378, PAGE 60. (AFFECTS THE PROPERTY AS SHOWN HEREON)*
12. *RIGHTS OF TENANTS IN POSSESSION AND/OR UNDER UNRECORDED LEASE AGREEMENTS. (NOT A SURVEY MATTER)*
13. *ANY ENCROACHMENT, ENCUMBRANCE, VIOLATION, VARIATION, OR ADVERSE CIRCUMSTANCE THAT WOULD BE DISCLOSED BY AN ACCURATE AND COMPLETE LAND SURVEY OF THE LAND. THE COVERAGE AFFORDED BY COVERED RISK 2(C) OF THE FINAL TITLE POLICY IS HEREBY DELETED. (MATTERS, IF ANY, ARE SHOWN HEREON. NOT ALL POTENTIAL ISSUES ARE A SURVEY MATTER.)*

CITY OF HAMPTON, VIRGINIA

ALTA/NSPS LAND TITLE SURVEY

JOB NO. 62061

SHEET NO. S-3

PROJECT NARRATIVE

Riverbend Landing

November 18, 2024

The subject property located in the City of Hampton known as 1612 and 1616 N. Armistead Avenue, Hampton, LRSN: 7000335, 7000336, and 7000337 and comprises approximately 16.9 acres consisting of approximately 6.7 acres of wetlands, approximately 2.3 acres of RPA buffer, and a net developable area of approximately 7.9 acres. The property is zoned PO-1 DISTRICT – PARKS AND OPEN SPACE GENERAL and R-11 DISTRICT—ONE FAMILY RESIDENTIAL and the applicant proposes to rezone the property to MD-4 DISTRICT— MULTIFAMILY RESIDENTIAL with proffers.

The project is proposed to consist of 215 apartment units in a mix of building configurations containing 1, 2, and 3 bedroom units. The community is anticipated to contain the following mix of unit types, sizes, and rental rates:

Unit Type	# of Units	Square Feet	Projected Rents
1 BR	69	715 SF	$1,600 - $1,750
2 BR	115	1,050 SF	$1,850 - $2,000
3 BR	32	1,245 SF	$2,300 - $2,450

Exterior building materials are intended to consist of fiber cement flat panel siding, fiber cement vertical siding and brick masonry veneer. The windows and doors are intended to be operable.

The following community amenities/recreation facilities are proposed:

- Community Bike racks
- Indoor Bike Storage
- Community Sidewalks
- Pool
- Clubhouse
- Fitness Center
- Outdoor Grilling Area
- Fire Pits
- Attractive Entrance Features
- Pedestrian Trail
- All buildings will be designed and constructed to meet the EnergyStar Multifamily New Construction requirements (a copy of which has been provided to Staff)
- Five (5) level 2 electric vehicle charging stations, each in a location convenient to one of the buildings, with 2 hookups per station
- Rear parking area will include pervious pavement or asphalt in the area of the parking stalls as shown on the conceptual site plan

Each building will have 3 outdoor bike racks, with each rack supporting 6 bikes. Additionally, the clubhouse will contain an indoor bike storage room for at least 15 bikes.

The conceptual site plan has been updated to reflect a 20-foot landscape buffer along the northwestern property line adjoining the rear of the properties along Westminster Drive. Along the front of the property (i.e., along Armistead Avenue), there will be a 4-foot black aluminum picket fence. Along the western side of the property, there will be a 6 to 8-foot privacy fence, which will be landscaped on both sides. Along the eastern side of the property, there will be a 6-foot opaque fence, which will be landscaped on both sides. Abutting the rear of the site, the plan is to install landscaping that integrates with the wetland area and install fencing only if necessary to control access and dependent upon site grading.

The entire site (parking lot and sidewalks) will be illuminated to at least 1 footcandle, and the lighting fixtures used will be energy efficient. The buildings will receive lighting externally via wall packs. All exterior lighting, site and building lighting, will be full cutoff lights which are "dark sky" compliant in order to avoid glare and prevent impacts to neighboring properties.

The buildings are not intended to contain elevators and are intended to be "walk-up" and contain internal, open-air breezeways that are designed and constructed to allow ample air flow and natural light, while also including daytime and nighttime lighting as well. The windows and doors in the stairwells are intended to be operable, and the entrances to the breezeways will have doors that are access controlled for our residents. The walls of these corridors will be of similar quality materials to the exterior of the building, while the floors will be wooden decking, treated and maintained to ensure no staining occurs. Mailboxes will be located centrally within each building.

The required number of parking spaces for the project is 346 spaces, which is the exact number of spaces shown on the conceptual site plan.

It is the Applicant's intent to use a pervious surface on the parking areas nearest the wetlands. These surfaces (and the underlying systems) provide additional stormwater quality treatment to protect this sensitive area. The intent is that the surface be comprised of pervious asphalt in the parking stalls of the area.

Stormwater within the site will most likely consist of an underground facility, however additional measures may be employed. The final design solution will be fully developed at the site plan review stage and will comply with City and State regulations The discharge point at the existing storm network will be analyzed for adequacy and the stormwater infrastructure shall be designed to meet the standards set with 9VAC25-870-66.

The community is intended to provide an exceptional quality of life for our residents with high quality design and construction in close proximity to large employment centers with convenient access to goods, services, and the interstate.

SITE DATA

Total Area = approximately 16.9 acres
Wetland = approximately 6.7 acres
100 ft RPA Buffer = approximately 2.3 acres
Net Area = approximately 7.9 acres
Proposed Zoning = MD-4 with Proffers
Total Multi-Family Units = 215
Parking Required = 346 spaces

Parking Provided = 346 Spaces (121 standard, 110 compact, 18 accessible, 92 permeable paver, and 5 electric vehicle charging stations)

Green Area Data

Parking - any parking area of 30 or more spaces, 7% of the interior parking area shall be green area:
104,345 SF Park Area (including drive aisles)
104,345 SF x 7% = 7,304 SF
Parking Green Area Required = 7,304 SF
Parking Green Area Proposed = 10,700 SF

Land Area – minimum of 10% of the land area shall be designated as green area:
Net Area = 7.9 AC
7.9 AC x 10% = 0.79 AC or 32,412 SF
Green Area Required = 34,412 SF
Green Area Proposed = 90,273 SF

Front Yard – development sites of 2 or more acres with 1 public street frontage shall have 50% of the green area within the front yard:
34,412 SF x 50% = 17,206 SF
Front Yard Green Area Required = 17,206 SF
Front Yard Green Area Proposed = 18,202 SF

LIST OF FIGURES

LIST OF TABLES

1 EXECUTIVE SUMMARY

This report presents the findings of the traffic impact analysis (TIA) prepared for the proposed 1612 Armistead Avenue multi-family development in the City of Hampton, Virginia.

1.1 PROJECT OVERVIEW

The proposed development is located south of Westminster Drive, north of Mercer Avenue and east of N. Armistead Avenue as shown in Figure 1-1 (all figures are located at the end of their respective chapter).

The proposed development will consist of up to 215 multi-family dwelling units with access provided via one right-in/right-out only site driveway on N. Armistead Avenue located approximately 65 feet south of the existing median break. A secondary, emergency only, access point will be located near the northern property boundary on N. Armistead Avenue. A site layout is shown on Figure 1-2.

For the purposes of this analysis, the development was assumed to be complete and occupied by 2027.

When complete, the proposed development will generate a total of 83 external AM peak hour trips (19 in and 64 out), 84 external PM peak hour trips (51 in and 33 out), and 976 external average weekday daily trips.

The purpose of this analysis is to determine the impact of the proposed development on the surrounding roadway network. The scope of this study was developed in conjunction with the City of Hampton via an agreed upon scoping document. A copy of the scoping document is included in Appendix A.

1.2 STUDY LIMITS

As agreed upon in the scoping document, the study limits include the following four (4) existing intersections:

1. N. Armistead Avenue and Mercury Boulevard (Signalized);
2. N. Armistead Avenue and Convention Center Boulevard/Reese Drive (Signalized);
3. N. Armistead Avenue and Freeman Drive/Mercer Avenue (Signalized); and
4. N. Armistead Avenue and Lake Hampton Drive (Signalized).

In addition, the intersection of the proposed site entrance and N. Armistead Avenue (Unsignalized) will be analyzed under future conditions.

In accordance with the scoping agreement, analyses were completed for the following scenarios:

1. 2024 Existing Traffic Conditions;
2. 2027 Background Traffic Conditions (without development of the site); and
3. 2027 Future Traffic Conditions (with development of the site)

The following steps were taken to determine the potential traffic impacts associated with this project:

1. Data Collection – Existing AM (7-9 AM) and PM (4-6 PM) peak hour traffic counts were collected at the existing study intersections on Tuesday, April 23, 2024.

2. Traffic Growth – In order to be conservative, a 1% annual growth rate was applied to existing traffic volumes to account for development outside the study area.

3. Background Developments – There are no background developments planned in the vicinity of the site.

4. Trip Generation – Traffic generated by the proposed development was estimated using the 11th edition of the Institute of Transportation Engineers' *Trip Generation Manual*.

5. Traffic Distributions – Per the scoping document, the distribution of trips generated by the proposed developed were based on other traffic studies in the area, the existing traffic volumes, the nature of the use, and local knowledge.

6. Site Traffic Projections – Future traffic volumes were determined by combining the 2027 background traffic volumes with proposed new trips generated by the site to create the 2027 total traffic volumes used in the analysis.

7. Traffic Capacity Analysis – Level of service calculations for existing, background, and future conditions were performed using SYNCHRO Version 11 with SimTraffic for signalized and unsignalized intersections.

8. Queuing Analysis – The 95th percentile queue lengths (Synchro) and maximum queues (SimTraffic) were reviewed at the intersections listed above.

1.3 PRINCIPAL FINDINGS AND RECOMMENDATIONS

Based on the analysis results, all study intersections will operate with acceptable queueing and delay with the development of the site. No improvements are required at any of the study intersections beyond the construction of a westbound right turn lane (100 feet of storage and 100 feet of taper) along N. Armistead Avenue at the site entrance.

Figure 1-1: Surrounding Roadway Network

Figure 1-2: Site Layout

2 BACKGROUND INFORMATION

2.1 DESCRIPTION OF ON-SITE DEVELOPMENT

The proposed development is located south of Westminster Drive, north of Mercer Avenue and east of N Armistead Avenue as shown in Figure 1-1 (all figures are located at the end of their respective chapter).

The proposed development will consist of up to 215 multi-family dwelling units with access provided via one right-in/right-out only site driveway on N. Armistead Avenue located approximately 65 feet south of the existing median break. A secondary, emergency only, access point will be located near the northern property boundary on N. Armistead Avenue. A site layout is shown on Figure 1-2.

For the purposes of this analysis, the development was assumed to be complete and occupied by 2027.

When complete, the proposed development will generate a total of 83 external AM peak hour trips (19 in and 64 out), 84 external PM peak hour trips (51 in and 33 out), and 976 external average weekday daily trips.

The purpose of this analysis is to determine the impact of the proposed development on the surrounding roadway network. The scope of this study was developed in conjunction with the City of Hampton via an agreed upon scoping document. A copy of the scoping document is included in Appendix A.

2.2 STUDY LIMITS

As agreed upon in the scoping document, the study limits include the following four (4) existing intersections:

1. N. Armistead Avenue and Mercury Boulevard (Signalized);
2. N. Armistead Avenue and Convention Center Boulevard/Reese Drive (Signalized);
3. N. Armistead Avenue and Freeman Drive/Mercer Ave (Signalized); and
4. N. Armistead Avenue and Lake Hampton Drive (Signalized).

In addition, the intersection of the proposed site entrance and N Armistead Avenue (Unsignalized) will be analyzed under future conditions.

2.3 EXISTING ROADWAY NETWORK

Mercury Boulevard is an eight-lane, divided, principal arterial roadway with a posted speed limit of 45 mph. According to 2022 VDOT AADT data, the most recently available, Mercury Boulevard services approximately 54,000 vehicles per day to the west of N. Armistead Avenue and 50,000 vehicles per day to the east of N. Armistead Avenue.

N. Armistead Avenue is a four-lane, divided, principal arterial with a posted speed limit of 45 mph. According to 2022 VDOT AADT data, the most recently available, N. Armistead Avenue services approximately 17,763 vehicles per day. For the purposes of this analysis, N. Armistead Avenue was assumed to run north-south through the study area.

Convention Center Boulevard is a four-lane, undivided, major collector, with a posted speed limit of 35 mph. Based on 2024 traffic count data, the current ADT on Convention Center Boulevard is approximately 965 vehicles per day.

Reese Drive is a two-lane, undivided, non-VDOT classified roadway with no posted speed limit, assumed to be 25 mph. Based on 2024 traffic count data, the current ADT on Convention Center Boulevard is approximately 315 vehicles per day.

Mercer Avenue is a two-lane, undivided, non-VDOT classified roadway with no posted speed limit, assumed to be 25 mph. Based on 2024 traffic count data, the current ADT on Convention Center Boulevard is approximately 1,255 vehicles per day.

Freeman Drive is a two-lane, undivided, non VDOT classified roadway with a speed limit of 25 mph. Based on 2024 traffic count data, the current ADT on Convention Center Boulevard is approximately 1,175 vehicles per day.

The existing lane use and traffic control at the study intersections is shown on Figure 2-1.

2.4 FUTURE IMPROVEMENTS

There are no funded improvements in the study area that will occur within the timeframe of this analysis (2027). There are improvements along N. Armistead Avenue (fiber, road grade, trail improvements, etc.) which will occur beyond the timeframe of this analysis.

2.5 OTHER MODES OF TRANSPORTATION

There are no existing sidewalks or pedestrian facilities along N. Armistead Avenue. While a future sidewalk is planned across the site frontage, it is unlikely that a significant portion of site traffic will be made via walking.

The nearest Hampton Roads Transit Stop is located at the Lake Hampton intersection, approximately 1/3 mile east of the site. However, without sidewalks to walk to the stop, it is unlikely that a significant portion of site traffic will be made via transit.

To be conservative and represent a worst case scenario analysis from a vehicular traffic standpoint, it was assumed all site generated traffic will be vehicular based and no reductions will be applied for other modes of transportation.

2.6 CRASH HISTORY

A review of the past three years (2021-2023) of available crash data from VDOT's Virginia Crash Map indicates that one (1) crash has occurred in the westbound direction of N. Armistead Avenue in the vicinity of the site intersection. The non-visible injury crash occurred in 2021 and is classified by VDOT as a "non-collision". Several other crashes occurred in the eastbound direction of N. Armistead Avenue but since the site entrance will be right-in/right-out only, these crashes will not impact the site entrance.

The data indicates there is not a significant crash history in the vicinity of the site entrance intersection.

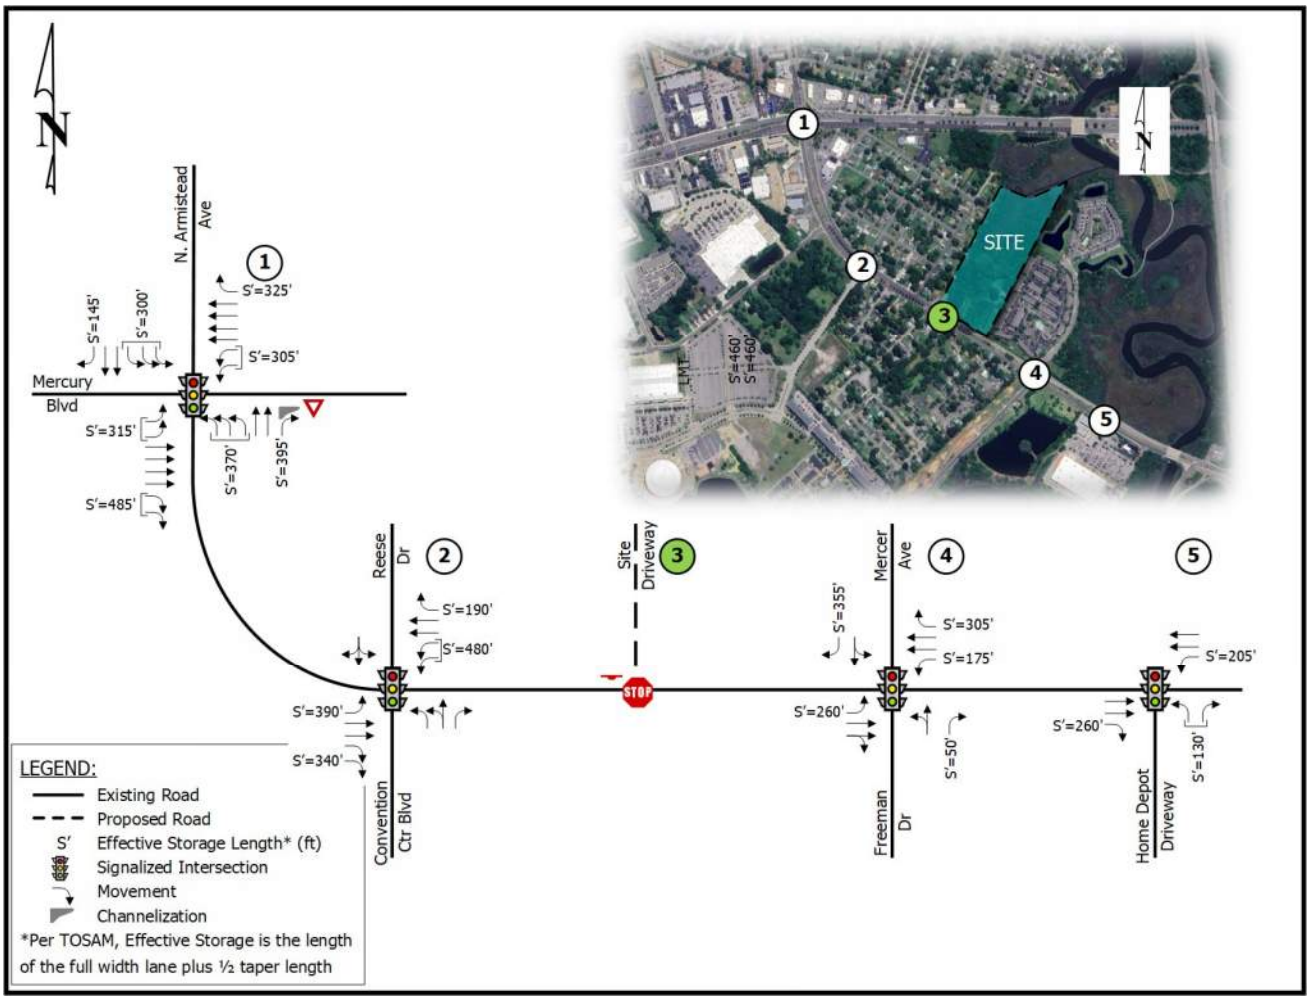

Figure 2-1: 2024 Existing Geometry and Intersection Control

3 2024 EXISTING CONDITIONS

3.1 EXISTING TRAFFIC VOLUMES

Directional turning movement counts (TMCs) were collected on April 23, 2024 during the morning (7:00 AM-9:00 AM) and evening (4:00 PM-6:00 PM) peak periods. The TMCs included heavy vehicles by movement and pedestrian/bicycles counts, where applicable. A copy of the count data is included in Appendix B.

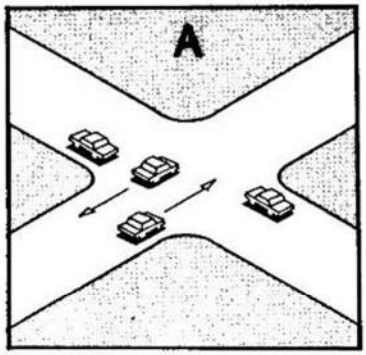
The peak hours analyzed in this report align with the highest traffic volumes of the roadway network which were 8:00 AM-9:00 AM and 4:00 PM-5:00 PM. The existing 2024 peak hour traffic volumes are shown on Figure 3-1 and the existing 2024 pedestrian volumes are shown on Figure 3-2.

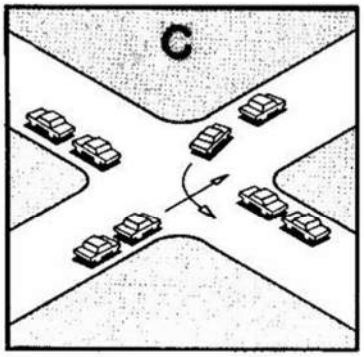
3.2 CAPACITY ANALYSIS

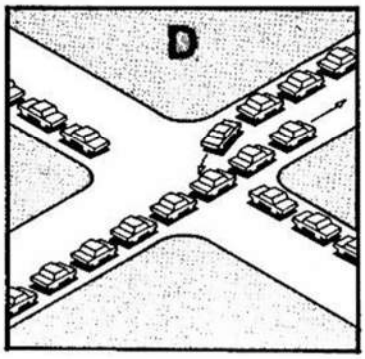
Capacity analysis allows traffic engineers to determine the impacts of traffic on the surrounding roadway network. The Transportation Research Board's (TRB) *Highway Capacity Manual* (HCM) methodologies govern how the capacity analyses are conducted and how the results are interpreted. There are six letter grades of Levels of Service (LOS) from A to F, with LOS A representing the best operating conditions and LOS F the worst operating conditions. Table 3-1 shows in detail how each of these levels of service are interpreted.

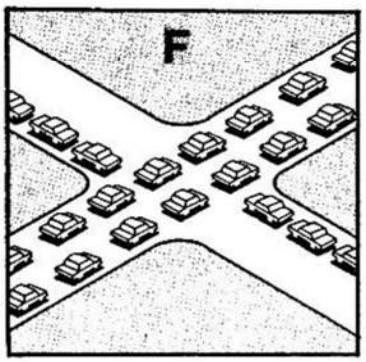
Table 3-1: Level of Service Definitions

Level of Service	Roadway Segments or Controlled Access Highways	Intersections
A	Free flow, low traffic density.	No vehicle waits longer than one signal indication.
B	Delay is not unreasonable, stable traffic flow.	On a rare occasion motorists wait through more than one signal indication.
C	Stable condition, movements somewhat restricted due to higher volumes, but not objectionable for motorists.	Intermittently drivers wait through more than one signal indication, and occasionally backups may develop behind left turning vehicles, traffic flow still stable and acceptable.
D	Movements more restricted, queues and delays may occur during short peaks, but lower demands occur often enough to permit clearing, thus preventing excessive backups.	Delays at intersections may become extensive with some, especially left-turning vehicles waiting two or more signal indications, but enough cycles with lower demand occur to permit periodic clearance, thus preventing excessive backups.
E	Actual capacity of the roadway invloves delay to all motorists due to congestion.	Very long queues may create lengthly delays, especially for left-turning vehicles.
F	Forced flow with demand volumes greater than capacity resulting in complete congestion. Volumes drop to zero in extreme cases.	Backups from locations downstream restrict or prevent movement of vehicles out of approach creating a storage ares during part or all of an hour.









SOURCE: *"A Policy on Design of Design of Urban Highways and Arterial Streets"* - AASHTO, 1973 based upon material published in *"Highway Capacity Manual"*, National Academy of Sciences, 1965.

For signalized and unsignalized intersections, level of service is defined in terms of **delay**, a measure of driver discomfort, frustration, fuel consumption and lost travel time. Table 3-2 summarizes the delay associated with each LOS category:

Table 3-2: Signalized and Unsignalized Intersection Level of Service Criteria

Signalized Intersections		Unsignalized Intersections	
Level of Service	Control Delay per Vehicle (sec/veh)	Level of Service	Average Control Delay (sec/veh)
A	≤ 10	A	0 to 10
B	> 10 to ≤ 20	B	> 10 to ≤ 15
C	> 20 to ≤ 35	C	> 15 to ≤ 25
D	> 35 to ≤ 55	D	> 25 to ≤ 35
E	> 55 to ≤ 80	E	> 35 to ≤ 50
F	> 80	F	> 50

Source: Exhibit 16-2 and Exhibit 17-2 from TRB's "Highway Capacity Manual 2000"

Capacity analyses were performed to assess existing (2024), background (2027), and future (2027) operational conditions. The signalized and unsignalized intersections were analyzed using SYNCHRO Version 11 based on HCM 2000 methodologies with the following assumptions per TOSAM (unless otherwise specified):

- Level terrain;
- 12-foot lane widths;
- Existing peak hour factor as determined by the traffic counts (by intersection) for existing scenario;
- The higher of the existing peak hour factor as determined by traffic counts (by intersection) or a peak hour factor of 0.92 for the background and total future scenarios.
- Heavy vehicle percentage as determined by the traffic counts (by movement); and
- Traffic signals timing data provided by the City of Hampton (see Appendix C).

HCM 2000 methodologies were used in the analysis (instead of HCM 6th) as HCM 6th requires strict NEMA phasing at all intersections. Some of the study intersections are utilizing non-NEMA phasing on the side streets which requires the use of HCM 2000.

Queuing analyses were conducted using both the HCM 2000 Edition methodology (as calculated by SYNCHRO) and SimTraffic simulations. The Synchro 95th percentile queue is the maximum back of queue for a particular lane within a lane group considering 95th percentile traffic volumes. The SimTraffic maximum queues are the average maximum queues after 10 runs of 60 minutes each.

Note that it is possible for the 95th percentile queue to be higher than the SimTraffic maximum queue due to the method in which each software calculates its respective value. The 95th percentile queue is based on an HCM formula while the SimTraffic maximum queue varies based on simulation results.

3.3 EXISTING CONDITIONS CAPACITY ANALYSIS RESULTS

Table 3-3 summarizes the 2024 existing intersection LOS, delay, 95th percentile queue lengths (Synchro), and maximum queue lengths (SimTraffic) based on the 2024 existing intersection geometry (Figure 2-1), the peak hour traffic volumes shown on Figure 3-1, and the existing signal timings as provided the City of Hampton.

The corresponding SYNCHRO and SimTraffic reports are included in Appendix D. Note that the intersection numbers shown on the LOS, delay, and queue length summary tables correspond with the intersection numbers used in the SYNCHRO models and report figures.

The results of the analysis are as follows:

- The signalized intersection of N Armistead Avenue and Mercury Boulevard operates at LOS C during the AM peak hour and LOS D during the PM peak hour.

- The signalized intersection of N Armistead Avenue and Convention Center Boulevard/Reese Drive operates at LOS B during the AM and PM peak hours, with all movement operating at LOS E or better.

- The signalized intersection of N Armistead Avenue and Freeman Drive/Mercer Avenue operates at LOS A during the AM and PM peak hours, with all movements operating at LOS E or better.

- The signalized intersection of N Armistead Avenue and Lake Hampton Drive operates at LOS B during the AM and PM peak hours with all movement operating at LOS E or better.

[3] Dual Right Turn Lanes, storage for outermost lane only

[4] Triple Turn Lanes, average storage provided

† SYNCHRO does not provide level of service or delay for unsignalized movements with no conflicting volumes.

- 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

m - Volume for 95th percentile queue is metered by upstream signal.

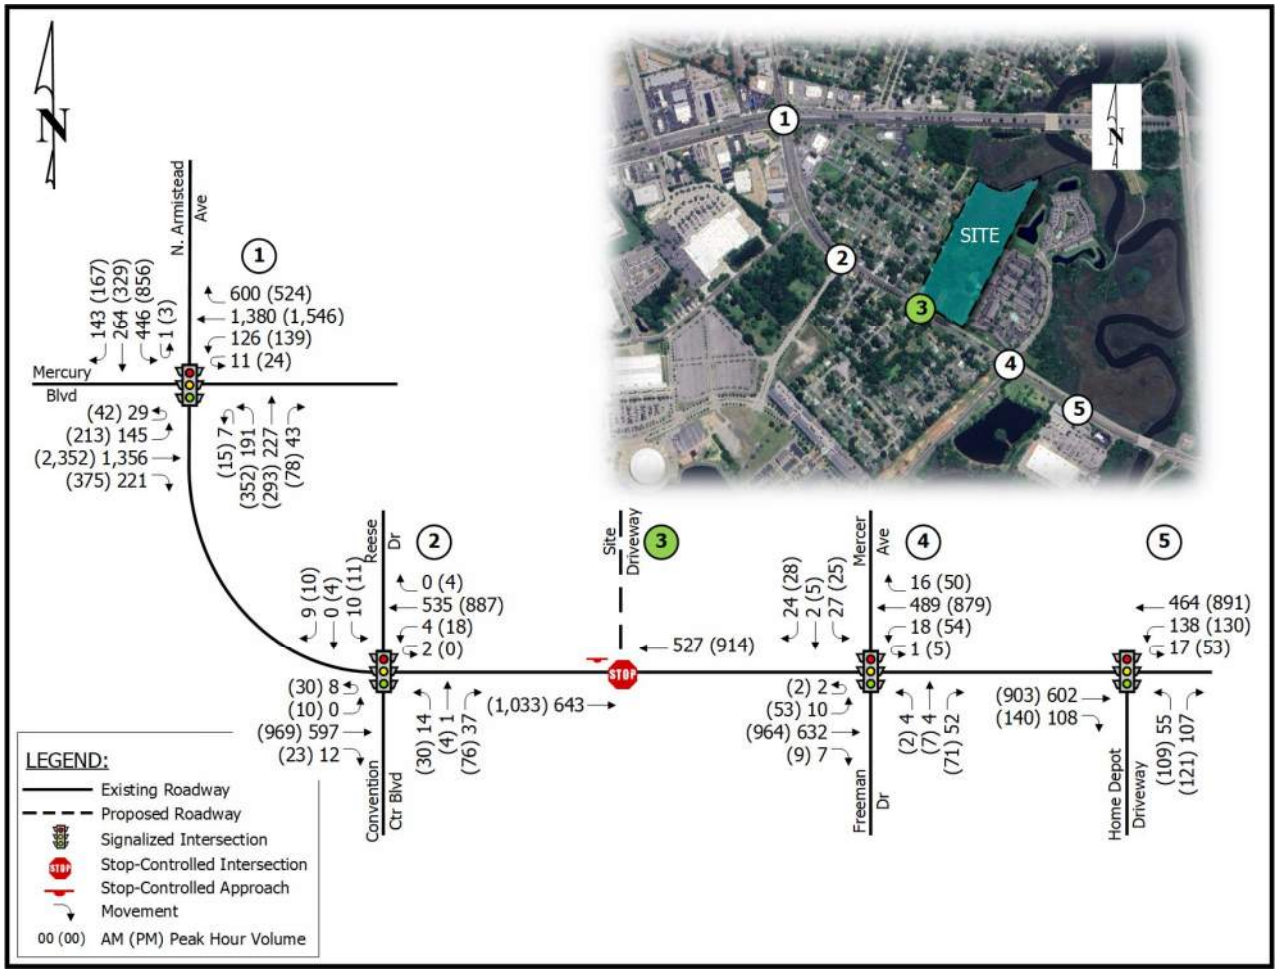

Figure 3-1: 2024 Existing Peak Hour Traffic Volumes

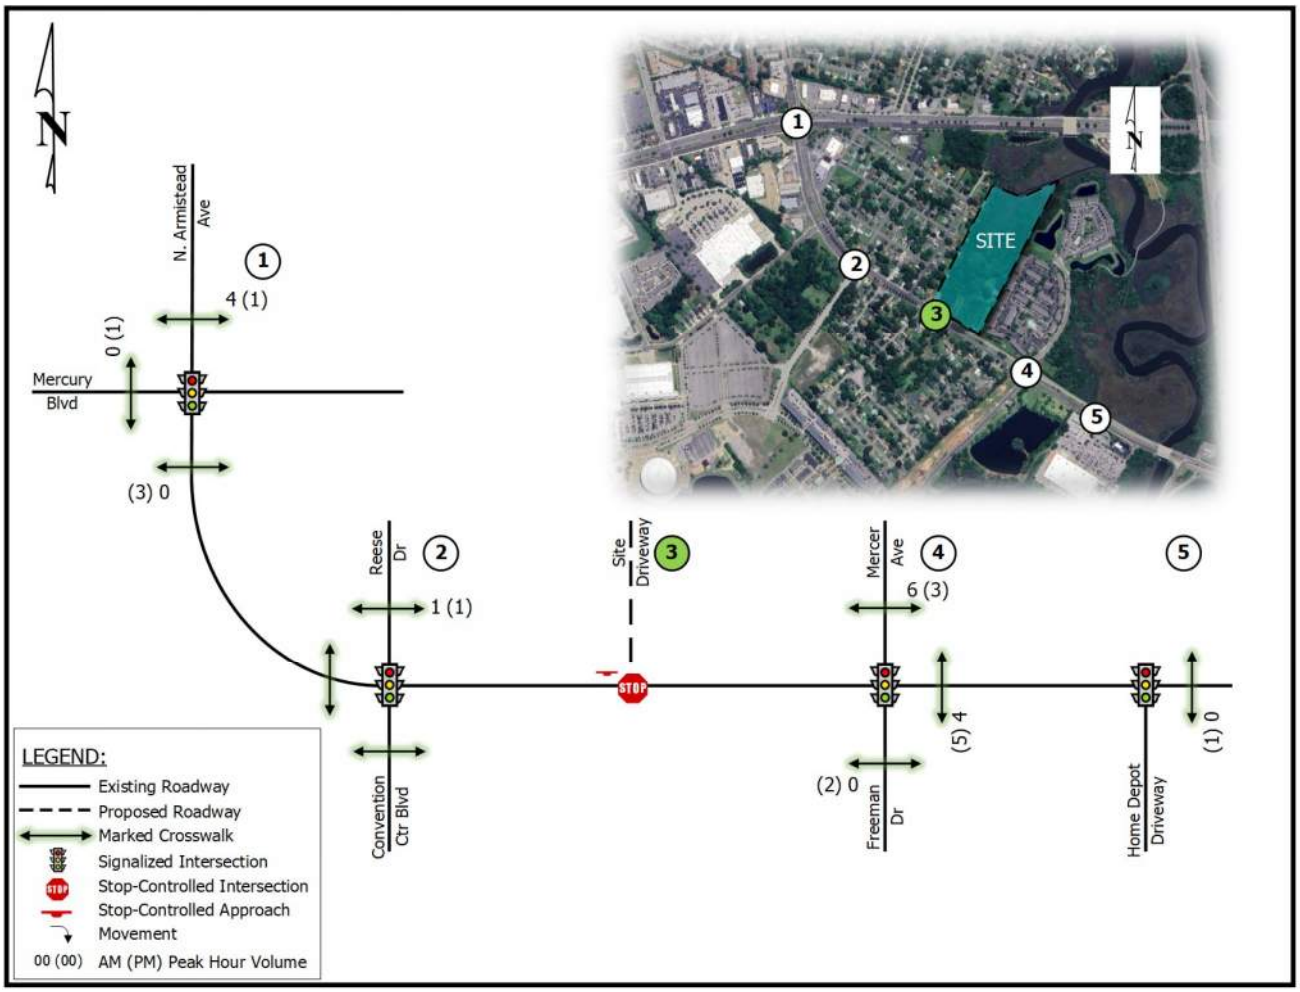

Figure 3-2: 2024 Existing Peak Hour Pedestrian Volumes

4 2027 BACKGROUND CONDITIONS

The background conditions assume existing intersection geometry in conjunction with projected background traffic, which consists of general traffic growth and growth due to approved, neighboring developments.

4.1 2027 BACKGROUND TRAFFIC VOLUMES

Approved Developments

There are no approved background developments in the vicinity of the site.

General Traffic Growth

Per the Scoping Documents, the 2027 background vehicle volumes were developed based on a 1.0% annual growth rate. The growth rate was compounded annually for the three-year period from 2024 to 2027 and was applied to all movements at the study intersections. The resulting 2027 vehicle background (existing + growth) volumes are shown on Figure 4-1.

4.2 BACKGROUND 2027 CAPACITY ANALYSIS RESULTS

Table 4-1 summarize the 2027 background intersection LOS, delay, 95th percentile queue lengths (Synchro), and maximum queue lengths (SimTraffic) based on 2027 background peak hour traffic volumes shown on Figure 4-1 and the existing signal timings as provided by the City of Hampton.

The corresponding SYNCHRO and SimTraffic reports are included in Appendix E. Note that the intersection numbers shown on the LOS, delay, and queue length summary tables correspond with the intersection numbers used in the SYNCHRO models and report figures.

As shown in Table 4-1, the results of the analysis include the following :

- The signalized intersection of N Armistead Avenue and Mercury Boulevard is expected to continue to operate at LOS C during the AM peak hour and LOS D during the PM peak hour.
- The signalized intersection of N Armistead Avenue and Convention Center Boulevard/Reese Drive is expected to continue to operate at LOS B during the AM and PM peak hours, with all movement operating at LOS E or better.
- The signalized intersection of N Armistead Avenue and Freeman Drive/Mercer Avenue is expected to continue to operate at LOS A during the AM and PM peak hours, with all movements operating at LOS E or better.
- The signalized intersection of N Armistead Avenue and Lake Hampton Drive is expected to continue to operate at LOS B during the AM and PM peak hours with all movement operating at LOS E or better.

m - Volume for 95th percentile queue is metered by upstream signal.

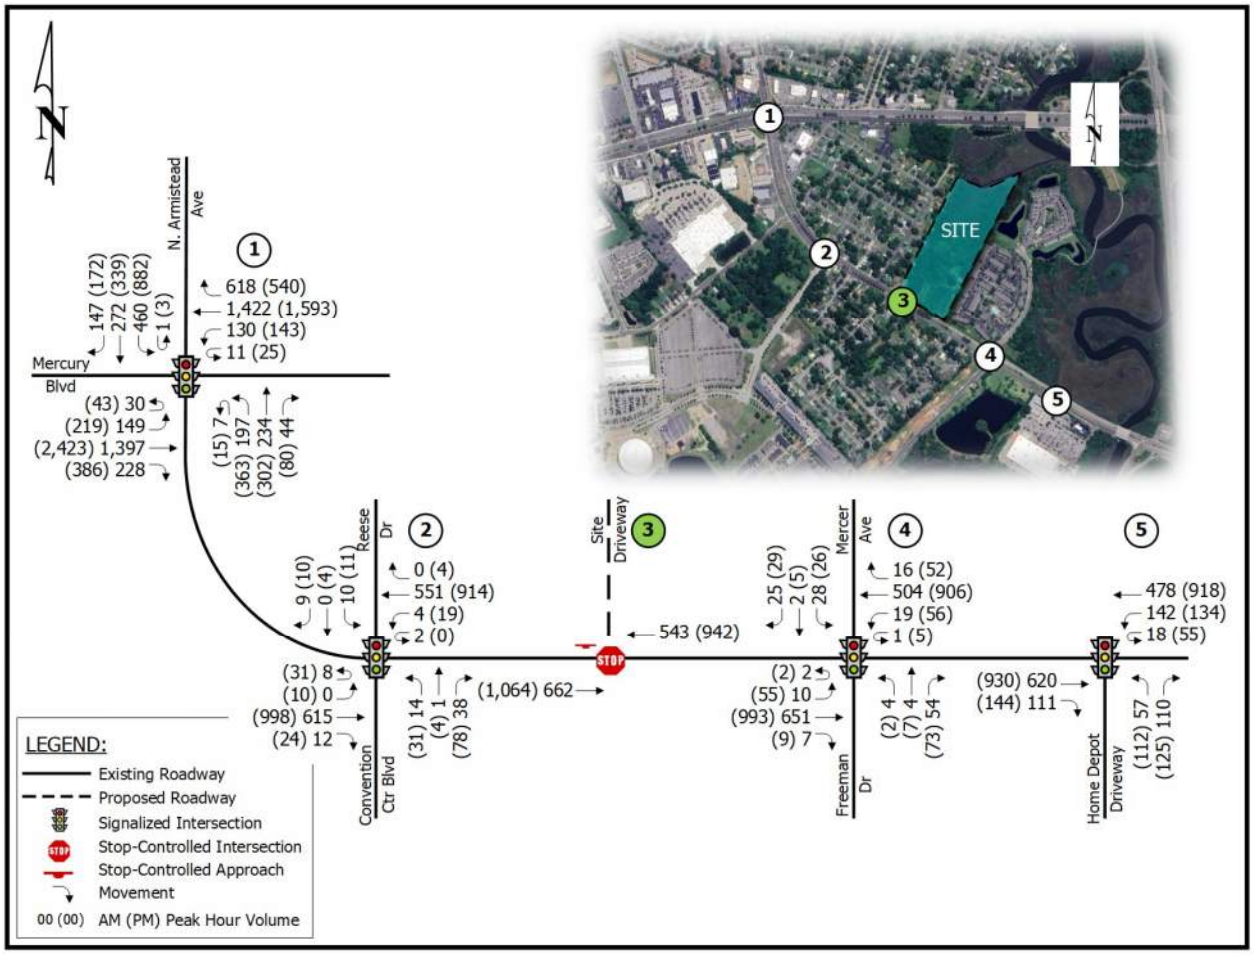

Figure 4-1: 2027 Background Peak Hour Traffic Volumes

5 TRIP GENERATION

The proposed development will consist of up to 215 multi-family dwelling units with access provided via one right-in/right-out only site driveway on N. Armistead Avenue located approximately 65 feet south of the existing median break. A secondary, emergency only, access point will be located near the northern property boundary on N. Armistead Avenue. A site layout is shown on Figure 1-2.

For the purposes of this analysis, the development was assumed to be complete and occupied by 2027.

5.1 SITE TRIP GENERATION

The site-generated traffic volumes shown in Table 5-1 were estimated using the 11th Edition of the Institute of Transportation Engineers' (ITE) *Trip Generation Manual* and were calculated using the number units as the independent variable. The development will consist of up to 215 units of multifamily housing.

Table 5-1: Trip Generation Summary

Buildout				Weekday						
			Land Use	AM Peak Hour			PM Peak Hour			Average
Land Use	Size	Units	Code	In	Out	Total	In	Out	Total	Daily Trips
1. ITE Trip Generation[(1)]										
Residential										
Multifamily Housing (Mid-Rise)	215	D.U.	221	19	64	83	51	33	84	976

Notes: (1) Based on the Institute of Transportation Engineers Trip Generation, 11th Edition. Assumes General Urban/Suburban land use category.

As shown in Table 5-1, the proposed development will generate a total of 83 external AM peak hour trips (19 in and 64 out), 84 external PM peak hour trips (51 in and 33 out), and 976 external average weekday daily trips.

5.2 EXTERNAL TRIP DISTRIBUTIONS

The distribution of trips generated by the proposed developed was based on other traffic studies in the area, the existing traffic volumes, the nature of the use, and local knowledge.

The following overall directional distributions were agreed upon per the scoping document for the site and are shown in Appendix A:

- 40% to/from the north on N. Armistead Avenue; and
- 60% to/from the south on N. Armistead Avenue.

5.3 TRAFFIC ASSIGNMENT

The trip distribution percentages shown on Figure 5-1 were applied to the site trips (Table 5-1) to distribute the external trips to the surrounding roadway network. The resulting site generated external trips are shown on Figure 5-2.

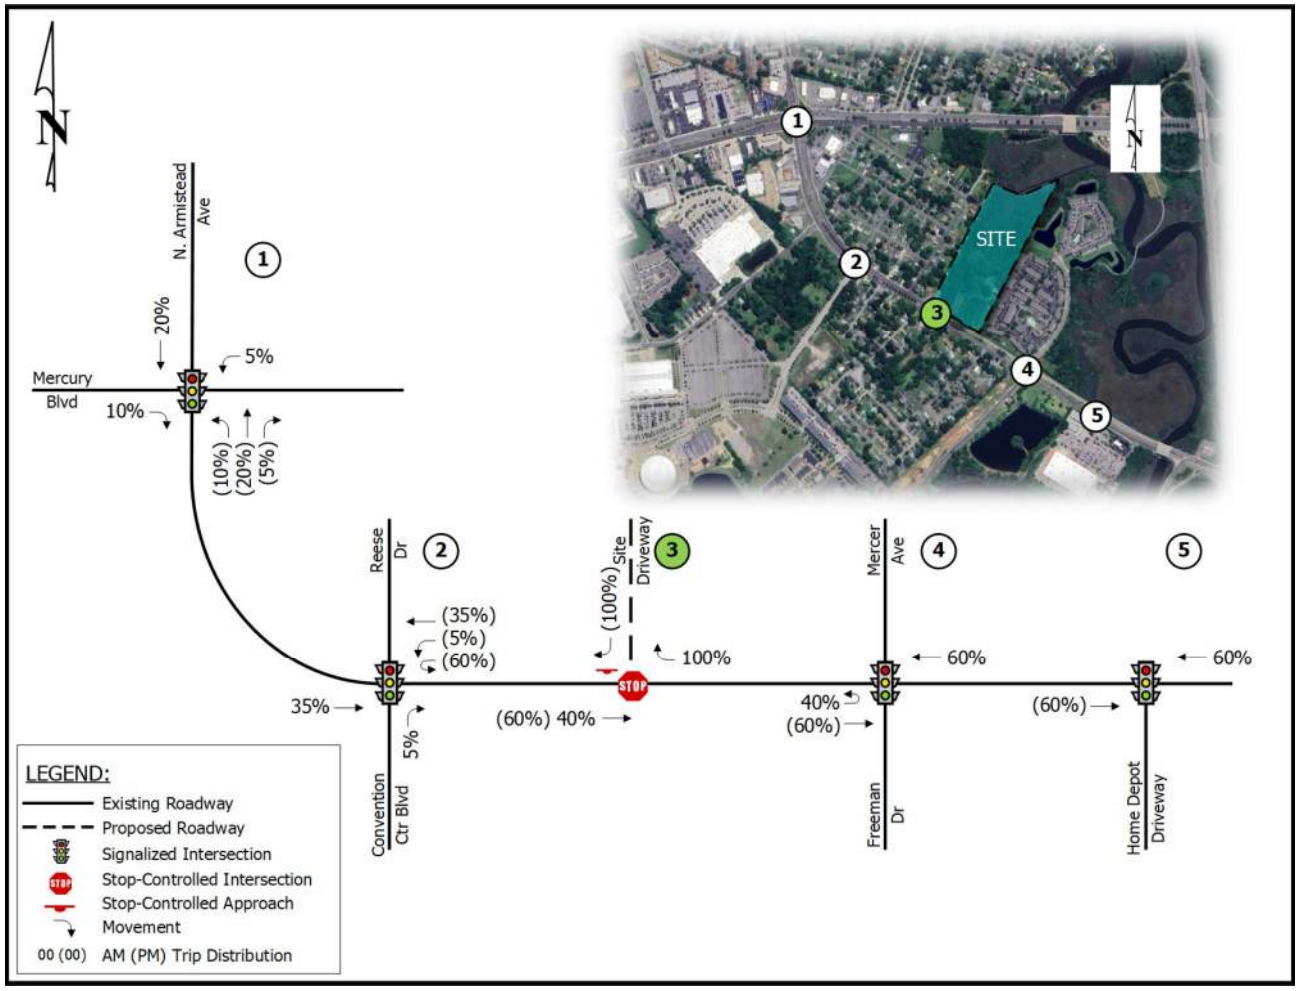

Figure 5-1: Site Trip Distribution

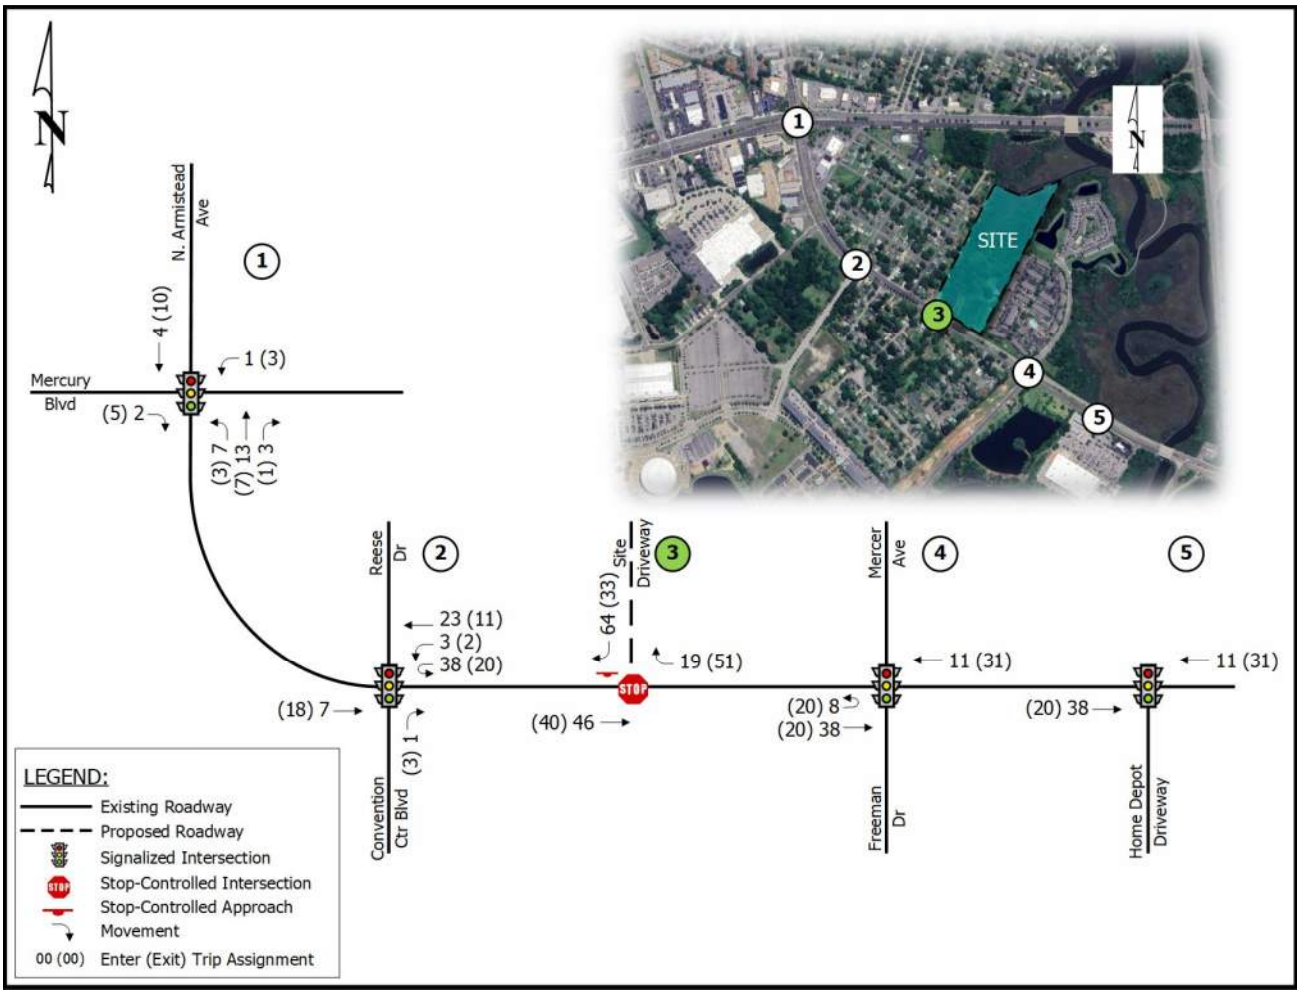

Figure 5-2: Site Generated Trips

6 2027 TOTAL FUTURE CONDITIONS

To complete the analysis of 2027 total conditions (with the proposed development), the estimated site trips were added to the background 2027 traffic volumes. The projected volumes were then used to complete the capacity analysis.

6.1 TOTAL FUTURE TRAFFIC VOLUMES

The site generated trips shown on Figure 5-2 were added to the 2027 background traffic volumes (Figure 4-3) to yield the 2027 total future traffic volumes shown in Figure 6-1.

6.2 TURN LANE WARRANT ANALYSIS

A right turn lane warrant analysis was conducted for the westbound right turn from N. Armistead Road entering the site. The analysis used the right-turn lane nomograph (Figure 3-27) from VDOT's Road Design Manual, Appendix F and the total future traffic volumes shown in Figure 6-1. The analysis is shown in Figure 6-2 and indicates a right turn lane taper only is warranted.

Per Figure 3-1 of Appendix F, with a posted speed limit of 45 mph, the taper length shall be 100 feet.

6.3 2027 FUTURE CONDITIONS ANALYSIS RESULTS

Table 6-1 summarize the 2027 total future intersection LOS, delay, 95th percentile queue lengths (Synchro), and maximum queue lengths (SimTraffic) based on the existing intersection geometry (Figure 2-1), 2027 total future peak hour traffic volumes (Figure 6-1) and the existing signal timings as provided by the City of Hampton.

The corresponding SYNCHRO and SimTraffic reports are included in Appendix F. Note that the intersection numbers shown on the LOS, delay, and queue length summary tables correspond with the intersection numbers used in the SYNCHRO models and report figures.

As shown in Table 6-1, the results of the analysis include the following:

- The signalized intersection of N. Armistead Avenue and Mercury Boulevard is expected to operate at LOS D during the AM and PM peak hours.
    - Note that the overall delay is expected to increase by 0.2 second in the AM peak hour and 0.4 second in the PM peak hour between Background and Future conditions. This increase would not be perceptible to drivers travelling through the intersection.
    - The site trips account for just 0.5% of the total vehicles in the intersection in the AM peak hour and 0.4% in the PM peak hour.

- The signalized intersection of N. Armistead Avenue and Convention Center Boulevard/Reese Drive is expected to continue to operate at LOS B during the AM and PM peak hours, with all movement operating at LOS E or better.

- The unsignalized intersection of N. Armistead Avenue and Site Driveway is expected to operate with short delays (less than 25 seconds) during the AM and PM peak hours, with queues of three vehicles or less with the following improvements:
    - Construct the site driveway with one ingress lane and one egress lane

- The signalized intersection of N Armistead Avenue and Freeman Drive/Mercer Avenue is expected to continue to operate at LOS A during the AM and PM peak hours, with all movements operating at LOS E or better.

- The signalized intersection of N Armistead Avenue and Lake Hampton Drive is expected to continue to operate at LOS B during the AM and PM peak hours with all movement operating at LOS E or better.

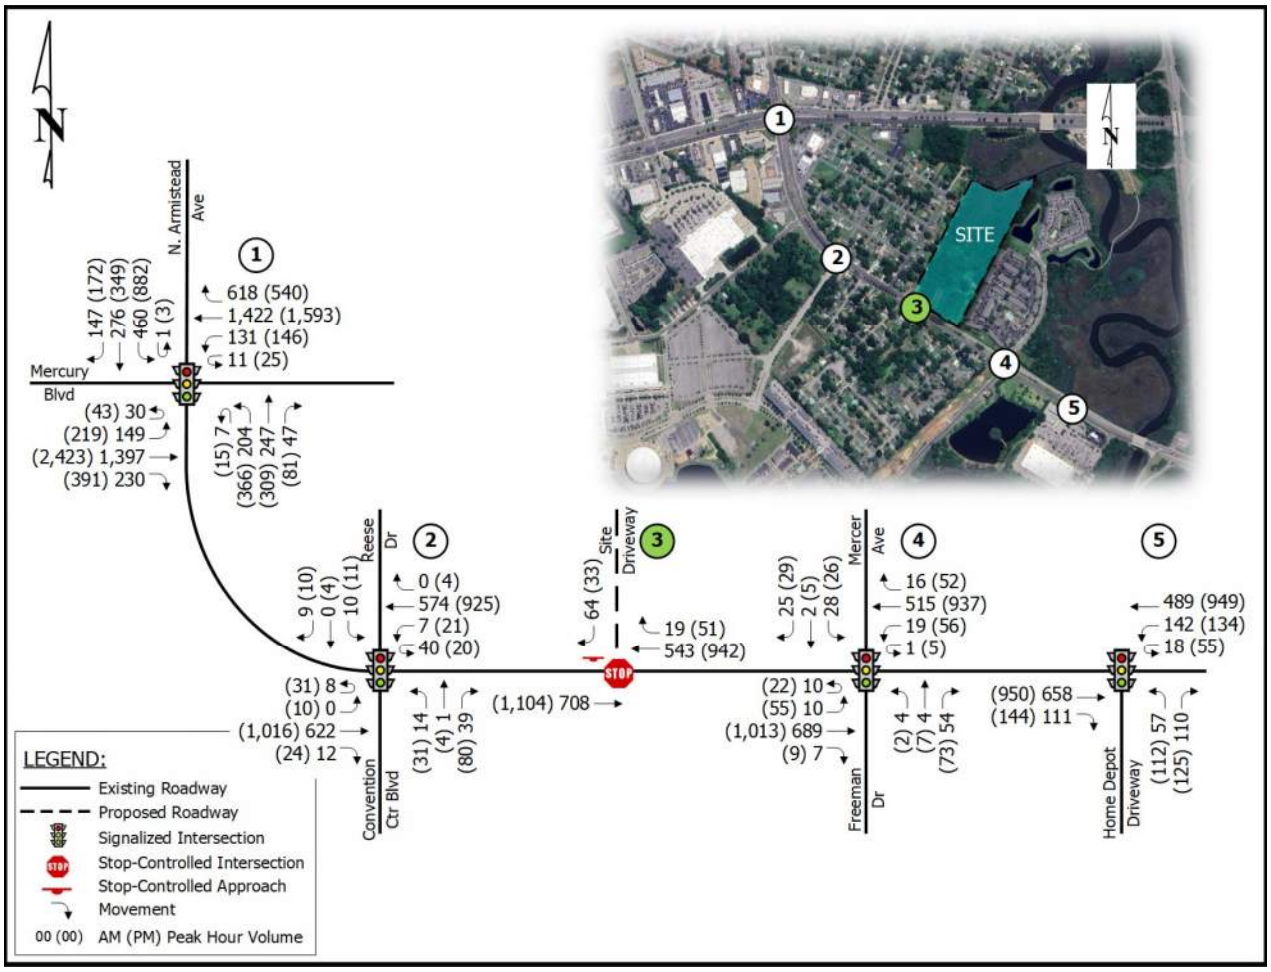

Figure 6-1: 2027 Total Future Peak Hour Traffic Volumes

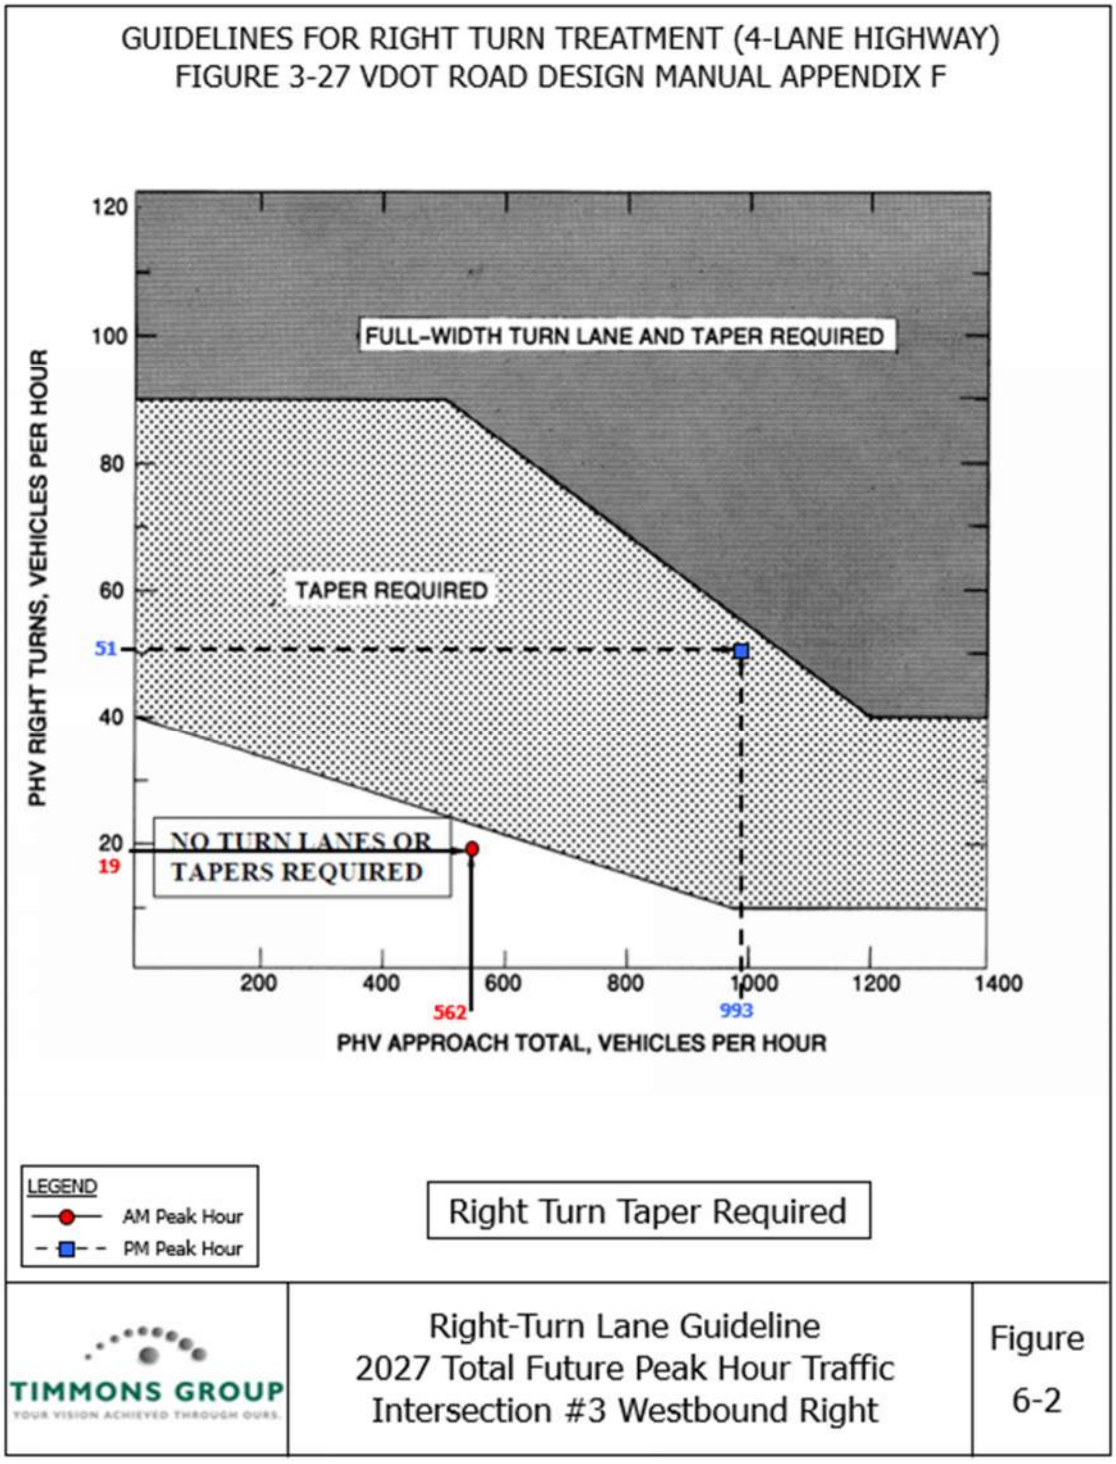

Figure 6-2: 2027 Turn Lane Warrant Analysis

7 CONCLUSIONS

Analyses were performed for the 2024 existing volumes, the 2027 background volumes (including the approved background development and growth), and the 2027 total future volumes, which includes site traffic generated by the proposed development.

7.1 PRINCIPAL FINDINGS AND RECOMMENDATIONS

Based on the analysis results, all study intersections will operate with acceptable queueing and delay with the development of the site. No improvements are required at any of the study intersections beyond the construction of a westbound right turn lane (100 feet of storage and 100 feet of taper) along N. Armistead Avenue at the site entrance.

PAGE INTENTIONALLY BLANK

Appendix A – Scoping Documents

City of Hampton TIA Scoping Checklist

Project Name: Riverbend Landing **TIA Scoping Date:** 4/30/24

☐ **TIA Need Screening Forms are Attached. Project Reference #:** _____ **Decision Date**: _____

☒ **Site Plan and Access**

☒ Provide a site plan illustrating site access, internal and external roadways, buildings and land uses.

☒ Identify site access

☒ Description and map or diagram of nearby uses, including parcel zoning.

New Access	On Road	Access Type		Driveway Spacing		
	Road Name	Permitted Movements	Traffic Control	Distance (ft)	Direction	Nearest Intersection / Access
Access A	N Armistead Avenue	Full Access	Unsignalized	370'	East of	N Armistead Ave/Finley St
Access B						
Access C						
Access D						
Access E						
Access F						
Access G						
Access H						

Existing Access	Existing Intersection of		Access Modification	**Proposed Interconnectivity** (If Applicable)		
	Road A	Road B		Connector #	Road Connected	Adjacent Development
Access 1				Connector 1		
Access 2				Connector 2		
Access 3				Connector 3		
Access 4				Connector 4		

☒ Additional access clarifications and provisions (e.g., proposed control-of-access or median breaks, modifications of existing access, loading/unloading area access, bike/pedestrian accommodation).

Proposed access located 60' east of existing median break. Project will explore relocating the median break. If that cannot occur, the entrance will be right-in/right out only.

☒ Trip Generation

The TIA Consultant shall prepare trip generation estimates following the current *Virginia Department of Transportation Traffic Operations and Safety Manual (TOSAM) – Version 2.0* and *City of Hampton TIA Policy*.

	%	%	%

☐ Identify proper infrastructure and accommodation for other modes of travel.

☒ **Analysis Peak Periods:**

☒ Weekday AM Peak: 7AM - 9AM

☒ Weekday PM Peak: 4PM - 6PM

☐ Weekend Peak: _____

☐ Other: _____

☒ **Peak Hour Factors (PHF):**

- ☒ Future Analysis PHF of 0.92:
- ☐ Future Analysis PHF of 0.88:
- ☐ PHF Based On Future Land Use:
- ☐ PHF Existing Traffic Count Data:
- ☐ Other:

☒ **Study Area Intersections and Data Collection**

The study area shall include the site access intersections (both new and existing) identified under "Site Plan and Access" on page 1, as well as the following external and, if applicable, internal intersections.

External Intersections	Intersection of		Traffic Control	Intersection Turning Movement Counts			Notes
	Road A	Road B		New / Existing	Date of Counts	Growth Adjustment	
#1	N Armistead Ave	Mercury Blvd	Signalized	New	4/23/24	None	-
#2	N Armistead Ave	Convention Center Blvd	Signalized	New	4/23/24	None	-
#3	N Armistead Ave	Site Ent	Unsignalized	New	4/23/24	None	-
#4	N Armistead Ave	Mercer Ave/ Freeman Dr	Signalized	New	4/23/24	None	-
#5	N Armistead Ave	Home Depot	Signalized	New	4/23/24	None	-
#6							
#7							
#8							
#9							
#10							
#11							
#12							

Internal Intersection	Intersection of		Access Type		Intersection Spacing		
	Road A	Road B	Traffic Control	Permitted Movements	Distance (ft)	Direction	Nearest Intersection
#101							
#102							
#103							
#104							
#105							

The following data will be collected:

- ☒ New traffic turning movement counts in ☒ 15-min intervals ☐ 5-min intervals (near schools)
  Unless otherwise noted above, new traffic counts shall be collected at the existing study intersections during the analysis periods. Weekday counts shall avoid Mondays, Fridays, holidays, school breaks, road closures, and major weather events.
- ☒ Roadway/Intersection Configuration & Traffic Control
- ☒ Traffic Signal Phasing & Timing Data
- ☒ Crash Data & Analysis
- ☐ Speed Studies
- ☐ Sight Distances
- ☒ Pedestrian & Bicycle Facilities
- ☒ Transit Routes
- ☐ Other

☐ **Future Year Analysis**

The following data will be collected:

- ☒ Project Build-Out Year: 2027
- ☐ Future Analysis Build-Out Year(s): _____
- ☐ Identify below any funded/committed future transportation improvements, as well as any approved but incomplete developments near the site.

Funded CIP or Other Improvement Project	Project Description	Year Complete
Armistead Ave	Fiber, road grade, and trail improvements	2028

Nearby Approved Development	Location	Future Land Use (exclude any complete phases)	Committed Improvements
None			

- ☒ Annual Growth Factor: 1% %
- ☒ Justification/Data Source: Proposed - consistent with recent studies in the City

☐ **Local Comprehensive Transportation Plan Compliance**

- ☐ Identify Applicable Local Transportation Planning Documents

☒ **Identify Applicable Roadways inside the Study Area**

Road Name	Classification	Speed Limit	Proposed Cross-Section	Proposed Right-of-Way	Compliance Requirements	Affect Study Intersection #
N Armistead Avenue	Principal Arterial	45				1,2,3,4,5
Convention Center Blvd	Major Collector	35				2
Mercer Avenue	Not Classified	Not Posted				4
Freeman Drive	Not Classified	25				4
Reese Drive	Not Classified	Not Posted				2
Mercury Blvd.	Principal Arterial	45				1

☒ **Study Method**

The traffic analysis shall follow the current *Virginia Department of Transportation Traffic Operations and Safety Manual (TOSAM) – Version 2.0* and use the current approved version of analysis software (e.g. Synchro/SimTraffic, HCS, Sidra Intersection, TransModeler).

The study shall include the following analysis scenarios for each analysis period.

- ☒ Existing Conditions
- ☒ Future Background Conditions (existing + background growth + approved developments + committed or funded improvements)
- ☒ Future Build Conditions (future no-build + site trips)
- ☐ Future Build with Improvements Conditions (future build traffic with improvements to mitigate the proposed development's impacts)
- ☐ Future Build-Out Year Conditions: _____
- ☐ Pedestrian & Bicycle Facilities
- ☐ Transit Routes
- ☐ Other

The following additional analysis/outputs should be provided as warranted:

- ☐ Signal Warrant Analysis for accesses/intersections: _____
- ☐ Multi-Modal Level of Service Analysis
- ☐ School Loading Zone Traffic Simulation
- ☐ Phasing Analysis (scope separately as needed)
- ☒ Safety/Crash Analysis
- ☐ Multi-Way Stop Intersection Analysis
- ☐ Parking Analysis
- ☐ Traffic Calming Devices
- ☒ Other: Turn lane warrant analysis at site entrance

☒ **Submittals**

In addition to the hardcopies required below, the TIA Consultant shall provide the City Engineer or representative and, if required, the local government an electronic copy of the study documents, including the latest site plan, figures and appendices, in searchable PDF files and the original traffic analysis files (e.g., Synchro, HCS). To expedite review, the NCDOT electronic submittals shall also be delivered concurrently to:

Agreement by All Parties

The undersigned agree to the contents and methodology described above for completing the required traffic impact analysis for the proposed development identified herein. Any changes to the above methodology contemplated by the Applicant or the TIA Consultant must be submitted to the City Engineer and VDOT in writing. If approved by the City Engineer and VDOT, then such changes may be accepted for the TIA report. Subsequent revisions to the development plan (e.g. land use, density, site access, or schedule) may require additional scoping and analysis, and may modify the TIA requirements.

This agreement shall become effective on the date approved by the City of Hampton, and shall expire _____ months after the effective date or upon significant changes to the roadway network and/or development assumptions, whichever occurs first. Once expired, renewal or re-scoping will be required for subsequent TIA submittals.

All,

We have revised the scoping documents from our meeting last week and have included them for your review. Please let us know if you have any questions/comments on them.

Can you please send along the signal timings for the Armistead/Mercury, Armistead/Convention Center, Armistead/Mercer, and Armistead/Home Depot intersections?

Thank you for all your help

Subject: [EXTERNAL] RE: Traffic Study Scoping - 1616 North Armistead

Gregory,

I think that is fine to move the formal scoping meeting to the 29th but I would ask if we could come to an agreement on study intersections prior to then so we can get going on any needed data collection. With the school year winding down, the count schedule is getting tighter and tighter so I would like to get these scheduled as soon as I can. Would that be possible? We can certainly work out all the other parameters of the study at the formal meeting.

We had identified the Armistead/Convention Center/Reese intersection and the Armistead/Freeman/Mercer intersection as the likely offsite intersections to be included in the study. Does that make sense to the City?

Happy to discuss over the phone if needed.

Thank you,
Steve
