Executive Summary

Overview

Between January 1, 2017, and February 28, 2025, the City of Hampton recorded 27,316 reportable crashes, averaging more than 3,300 per year. The City of Hampton accounts for 21 percent of all severe crashes in the Hampton Roads District, the highest in the region, and also leads in overall injury and pedestrian-related severe crashes, while ranking fifth for fatal crashes and fourth for total crashes. Pedestrians and bicyclists represent 21 percent of fatalities, including 187 serious pedestrian injuries and 17 pedestrian deaths. Key contributing factors include distracted driving (16 percent), alcohol involvement (29 percent of fatal crashes), and lack of seat belt use (40 percent of fatalities). This report documents the City of Hampton first Safe Streets for All (SS4A) Action Plan under the U.S. Department of Transportation's SS4A Planning and Demonstration Grant Program, funded through the Bipartisan Infrastructure Law (BIL) or Infrastructure Investment and Jobs Act (IIJA), which applies the Federal Highway Administration's Safe System Approach to reduce severe crashes, improve safety for vulnerable road users, and create safer streets for all.

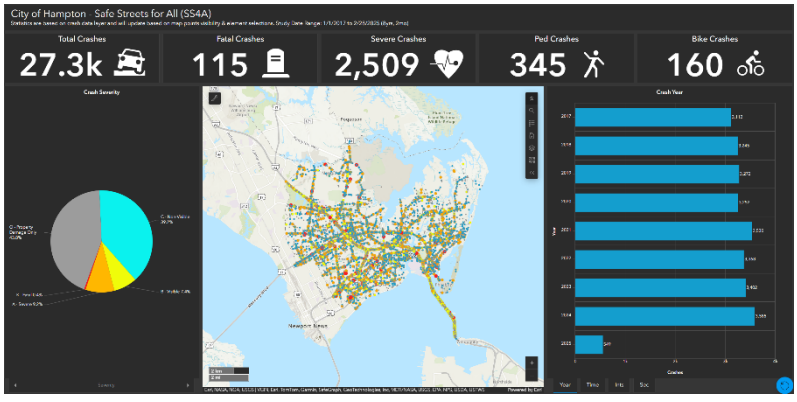
Community Engagement

The SS4A Action Plan was shaped by the experiences of community members and informed through input from residents, businesses, and regional stakeholders. To capture broad perspectives on transportation, safety challenges, and opportunities, there was a public survey that was open from August through September 2025 and received 694 responses.

Vision

The City of Hampton's Vision Zero Safe Streets and Roads for All Action Plan commits to eliminating traffic fatalities and serious injuries by fostering a culture of safety for all travel modes. As a living document, the plan outlines long-term strategies that emphasize equity, education, empowerment, and engagement, while maintaining flexibility to adapt over time. Through measurable actions and ongoing progress tracking, the City seeks to create a safer, more inclusive transportation network for residents and visitors.

Safety Dashboard



To support informed decision-making for City officials and community stakeholders, Hampton has developed a public-facing Vision Zero Crash Dashboard to complement the Action Plan. The dashboard provides easy access to key crash metrics—such as frequency, severity, and type of incidents—within defined areas and timeframes. With interactive maps, charts, and filtering tools, users can explore

data by location, time of day, road conditions, weather, and contributing crash factors. By tracking progress toward Vision Zero goals, the dashboard enhances transparency, supports community engagement, and ensures residents stay informed about local safety efforts. Ultimately, this tool strengthens data-driven decision-making and advances Hampton's commitment to eliminating traffic fatalities and serious injuries. The safety dashboard can be accessed at https://www.arcgis.com/apps/dashboards/8cda9a34c51d4956a923a045063937ec.

Next Steps

The City of Hampton's SS4A Action Plan marks an important first step toward achieving its Vision Zero and safety goals. Adoption of the plan also allows the City of Hampton to secure Federal funding through an SS4A Implementation Grant.

City of Hampton Risk Management

City of Hampton Traffic Engineering and Operations

City of Hampton Engineering Services

City of Hampton Community Development

City of Hampton Street and Bridge Operations

Community Members & Organizations

Thank you to all the community members who participated in the SS4A survey. Your experiences and insights played a vital role in shaping the recommendations in this plan. The Safe Streets and Roads for All Steering Committee also extends its appreciation to the many organizations and individuals who shared information and supported outreach efforts throughout the planning process.

Introduction

Purpose

Safe Streets and Roads for All

The Infrastructure Investment and Jobs Act (IIJA) established the Safe Streets and Roads for All (SS4A[1]) competitive grant program with $5 billion in appropriated funds over 5 years, 2022-2026.

The SS4A program funds regional, local, and Tribal initiatives through grants to prevent roadway fatalities and serious injuries.

Data Driven

A data-driven approach was taken to identify existing and potential transportation safety issues for all mode users throughout the City of Hampton.

Vision Zero

Vision Zero is a transportation safety philosophy to eliminate deaths and severe injuries in the transportation system.

Safe System Approach

This Action Plan utilizes the Federal Highway Administration's (FHWA) Safe System Approach[2] for guiding the recommendations. The Safe System Approach is an effective way to address and mitigate the risks inherent in our enormous and complex transportation system. It works by building and reinforcing multiple layers of protection to both prevent crashes from happening in the first place and minimize the harm caused to those involved when crashes do occur. It is a holistic and comprehensive approach that provides a guiding framework to make places safer for people.

The Safe System Approach is based on six principles and five objectives.

Principles of a Safe System Approach

1. **Death and Serious Injuries are Unacceptable**: A Safe System Approach prioritizes the elimination of crashes that result in death and serious injuries.
2. **Humans Make Mistakes**: People will inevitably make mistakes and decisions that can lead or contribute to crashes, but the transportation system can be designed and operated to accommodate certain types and levels of human mistakes and avoid death and serious injuries when a crash occurs.

[1] https://www.transportation.gov/grants/SS4A
[2] https://www.transportation.gov/safe-system-approach

3. **Humans Are Vulnerable**: Human bodies have physical limits for tolerating crash forces before death or serious injury occurs; therefore, it is critical to design and operate a transportation system that is human-centric and accommodates physical human vulnerabilities.
4. **Responsibility is Shared**: All stakeholders—including government at all levels, industry, non-profit/advocacy, researchers, and the general public—are vital to preventing fatalities and serious injuries on our roadways.
5. **Safety is Proactive**: Proactive tools should be used to identify and address safety issues in the transportation system, rather than waiting for crashes to occur and react afterwards.
6. **Redundancy is Crucial**: Reducing risks requires that all parts of the transportation system be strengthened, so that if one part fails, the other parts still protect people.

Objectives of a Safe System Approach

1. **Safer People**: Encourage safe, responsible driving and behavior by people who use our roads and create conditions that prioritize their ability to reach their destination unharmed.
2. **Safer Roads**: Design roadway environments to mitigate human mistakes and account for injury tolerances, to encourage safer behaviors, and to facilitate safe travel by the most vulnerable users.
3. **Safer Vehicles**: Expand the availability of vehicle systems and features that help to prevent crashes and minimize the impact of crashes on both occupants and non-occupants.
4. **Safer Speeds**: Promote safer speeds in all roadway environments through a combination of thoughtful, equitable, context-appropriate roadway design, appropriate speed-limit setting, targeted education, outreach campaigns, and enforcement.
5. **Post-Crash Care**: Enhance the survivability of crashes through expedient access to emergency medical care, while creating a safe working environment for vital first responders and preventing secondary crashes through robust traffic incident management practices.

Vision Zero

The City of Hampton is committed to eliminating traffic fatalities and serious injuries on our streets. We believe that no loss of life—regardless of travel mode or whether someone is a resident or visitor—is acceptable.

Through the Vision Zero Safe Streets and Roads for All Action Plan, the City will promote a culture of safety, prioritize equity, and actively engage the community. This plan will track progress, measure results, and guide efforts to eliminate severe traffic crashes. As a living document, it is designed to support long-term strategies while adapting to future needs.

By focusing on education, empowerment, and engagement, Hampton will take bold, measurable steps to make our streets safer for everyone—whether walking, biking, driving, or taking transit.

Safe Streets and Roads for All Program

The Bipartisan Infrastructure Law (BIL), also known as the Infrastructure Investment and Jobs Act (IIJA), was enacted in November 2021 as landmark legislation that provided historic transportation funding and placed a stronger focus on roadway safety. A key component of this effort is the *Safe Streets and Roads for All (SS4A)* program, which supports the U.S. Department of Transportation's National Roadway Safety Strategy and its goal of eliminating roadway deaths through a Safe System Approach.

The SS4A program funds the development of *Comprehensive Safety Action Plans*, which identify major roadway safety concerns in a community and outline strategies and projects to address them. Having an Action Plan in place is a requirement for eligibility to receive federal funding for project implementation.

The program offers two types of grants:

- **Planning and Demonstration Grants** – Support the creation, completion, or enhancement of Action Plans, including supplemental planning or demonstration activities that inform plan development.
- **Implementation Grants** – Provide funding to carry out projects and strategies identified in an Action Plan, which may include infrastructure improvements, behavioral programs, or operational measures, along with project-level planning, design, and development.

Alignment with Other Planning Efforts

This Action Plan is aligned with state, regional, and local planning efforts, designed to build on existing initiatives while highlighting the essential role of roadway safety in meeting their objectives. These efforts include the City of Hampton ADA Barrier Assessment, the HRPTO Regional Performance Measures & Targets[3], and VDOT's Strategic Highway Safety Plan[4].

Vision & Goals

The City of Hampton wants to ensure safe movement on all travel modes for all residents and visitors traveling on the transportation network. To achieve this the City of Hampton will foster a culture of road safety within our community, recognizing that any traffic fatality or injury is unacceptable. The City of Hampton's Vision Zero Safe Streets and Roads for All Action Plan is a dynamic document and it is envisioned to evolve and improve as the City takes actions to achieve Vision Zero. The action plan outlines strategic actions for the next decades, with the flexibility to adapt as needed. The City's safety planning activities to achieve Vision Zero will focus on equity, education, empowerment, and engagement. The action plan will effectively measures, track progress, and seek to eliminate traffic fatalities and serious injuries, making the community a safer place to live and work.

Safety Action Plan Goals

1. Improve safe pedestrian mobility

[3] https://www.hrtpo.org/554/Regional-Performance-Measures-Targets
[4] https://www.vdot.virginia.gov/about/safety-plan/

2. Improve safe vehicle mobility
3. Improve safe accessibility for all people regardless of mode across the transportation network
4. Continue and improve regional collaboration on traffic safety initiatives
5. Improve collaboration and coordination with residents on traffic safety initiatives

Safety Action Plan Objectives

Improve Safe Pedestrian Mobility

- Reduce pedestrian-related traffic fatalities by half over the following five years from the plan's adoption.
- Elimination of pedestrian fatalities within 10 years of adoption of the plan.
- Reduce pedestrian serious injuries by a third over the following five years from the adoption of the plan.
- Further reduction of serious pedestrian injuries by 50 percent over the following 10 years after adoption of the plan.

Improve Safe Vehicle Mobility

- Reduce vehicle-related traffic fatalities by half over the following ten years from the plan's adoption.
- Elimination of vehicle fatalities within 15 to 20 years of adoption of the plan.
- Reduce vehicle-related crash serious injuries by a third over the following 10 years from the adoption of the plan.
- Further reduction of vehicle-related crash serious injuries by 50 percent over the following 15 years after the adoption of the plan.

Improve Safe Accessibility for All Users Across the Transportation Network

- Complete a review of the non-motorized network and identify gaps in the network within five years of the adoption of the plan.
- Reduce the number of modal conflict points at shopping centers, community centers, and schools.
- Coordinate with the transit agency to provide safe bus stop access.

Continue and Improve Regional Collaboration on Traffic Safety Initiatives

- Develop working groups across departments within the City to coordinate traffic safety initiatives.
- Coordinate with HRTPO and VDOT on traffic safety initiatives.
- Improve outreach to communities with the City of Hampton on traffic safety initiatives.

Improve Collaboration and Coordination with Residents

- Create a dashboard to track transportation projects and highlight safety impacts.
- Use existing public outreach events to collect and hear community traffic safety concerns.

Public Outreach

The City of Hampton conducted a public engagement survey to inform the Vision Zero Safety Action Plan. The survey was open from August through September 2025 and received 694 responses. A majority of the respondents (88 percent) reported living in Hampton, while 5 percent indicated they travel through the city for errands or events, and another 5 percent reported working or commuting through Hampton.

Survey results identified speeding and aggressive driving as the most significant safety concerns, reported by 81 percent of respondents. Additional concerns included unsafe intersections (46 percent), missing or inadequate sidewalks (40 percent), unsafe pedestrian and bicycle crossings (34 percent), and sudden stopping or rear-end crashes (33 percent). Inadequate lighting (27 percent) and insufficient signage or pavement markings (28 percent) were also noted.

Mobility challenges were highlighted, with poor signal coordination reported by 51 percent of respondents as the leading issue. Other concerns included vehicles blocking entrances (32 percent), difficulty making left turns (29 percent), and challenges accessing businesses (23 percent).

Travel behavior data indicated that 83 percent of respondents drive daily within Hampton, while 13 percent drive several times per week. Nearly all respondents (98 percent) reported using a personal vehicle as their primary mode of transportation. Walking (33 percent), bicycling (19 percent), and ride-hailing (4 percent) were also reported as secondary modes of travel.

Support for the City's Vision Zero Safety Action Plan was strong, with 88 percent of respondents indicating support or strong support for the Vision Zero vision statement. More than 78 percent of respondents expressed agreement with the plan's goals to improve pedestrian mobility, vehicle mobility, and overall accessibility. Furthermore, 78 percent of respondents agreed or strongly agreed that pedestrian safety goals are achievable, while 75 percent expressed similar confidence in the feasibility of vehicle safety objectives.

The survey also collected input on transit and bus stop safety from 312 respondents. The most frequently cited concerns included the absence of sidewalks, particularly along Shell Road, Pembroke Avenue, and Mercury Boulevard, inadequate lighting, unsafe pedestrian crossings, and a lack of bus stop shelters. Respondents emphasized the importance of improving pedestrian infrastructure near schools and high-use bus stops.

In addition, 66 percent of participants indicated they would be likely or very likely to use an online dashboard to monitor the City's progress toward Vision Zero. Detailed survey results are summarized in **Appendix A**.

Safety Analysis

Reportable crashes within the City of Hampton were reviewed using crash data from VDOT's Virginia Roads and Power BI tools for the 8-year and 2-month period **between January 1, 2017, and February 28, 2025**. A reportable crash includes any crash that results in injury, fatality, or a vehicle being towed from the scene due to damage. The detailed crash data can be found in **Appendix B**.

An analysis of crash data through February 2025 indicates that, within the Hampton Roads District, the City of Hampton experiences the highest number of severe injury crashes, representing 21 percent of all severe crashes in the Hampton Roads District. The City of Hampton also records the highest number of overall injury crashes and pedestrian severe injuries. The City of Hampton places fifth for fatal crashes and fourth for total crashes.

Of particular concern are crashes involving **pedestrians and bicyclists**, who represent **21% of fatalities**. The city also leads the district in **pedestrian-related injuries**, with **187 pedestrian crashes** resulting in serious injury and **17 pedestrian fatalities**.

Crash factors include distracted driving (16%), unbelted occupants (40% of fatalities), and alcohol, which was noted in 29% of fatal crashes and 5% of injury crashes. Most crashes involve two or more vehicles, and 77% of all crashes occurred on non-interstate roads, including U.S., State, and Secondary routes.

Table 1. Crashes within the City of Hampton compared to the Hampton Roads District

Crash Trends

From January 1, 2017, through February 28, 2025, the City of Hampton experienced a total of 27,316 reported crashes, averaging approximately 3,335 crashes per year.

Analysis of crash data reveals several key trends:

- The majority of both fatal and injury crashes involve two or more vehicles.
- Distracted driving is a contributing factor in approximately 16 percent of all crashes.
- Unbelted drivers account for 40 percent of all fatalities.
- Pedestrians and bicyclists represent 21 percent of fatalities, highlighting significant vulnerability among non-motorized road users.
- Alcohol involvement is reported in 29 percent of fatal crashes and 5 percent of injury crashes.

The majority of the crashes in the City of Hampton occurred during daylight hours and under clear weather conditions. However, approximately **12 percent of crashes took place in rainy weather**, and **29 percent occurred at night**, highlighting the role of environmental factors in crash occurrence.

Table 2. Crashes by weather and lighting conditions within the City of Hampton

Crashes by Weather and Lighting Conditions									
Weather Type	**Dawn**	**Daylight**	**Dusk**	**Darkness - Road Lighted**	**Darkness - Road Not Lighted**	**Darkness - Unknown Road Lighting**	**Unknown**	**Total**	**Percent**
No Adverse Condition	512	15682	656	6011	439	44	58	23402	**85.7%**
Blowing Sand, Soil, Dirt, or Snow	0	16	4	14	0	0	1	35	**0.1%**
Severe Crosswinds	1	3	0	4	0	1	1	10	**0.0%**
Fog	4	17	1	24	5	0	0	51	**0.2%**
Mist	12	176	12	138	11	1	1	351	**1.3%**

Snow	5	56	5	63	5	0	1	135	**0.5%**
Sleet/Hail	2	6	1	9	0	0	0	18	**0.1%**
Smoke/Dust	0	1	0	0	0	0	0	1	**0.0%**
Other	1	20	3	18	2	0	7	51	**0.2%**
Total	**617**	**17,876**	**809**	**7,339**	**547**	**59**	**69**	**27,316**	**100.0%**
Percent	**2.3%**	**67.3%**	**3.0%**	**27.6%**	**2.1%**	**0.2%**	**0.3%**	**100.0%**	

Crash occurrences in the City of Hampton are heavily concentrated during peak travel periods. Approximately **31 percent of all crashes occur during the evening peak hours (3:00–7:00 p.m.)**. In contrast, the **most severe injury crashes are concentrated during nighttime hours (7:00 p.m.–6:00 a.m.)**.

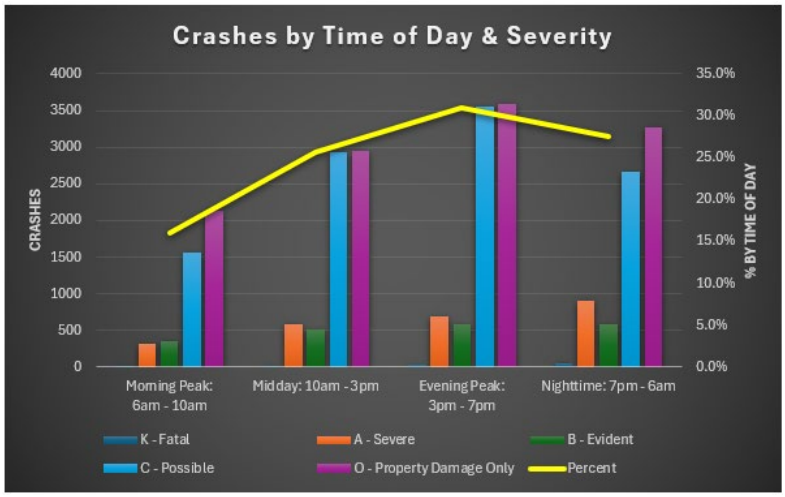

Figure 1. Crashes within the City of Hampton by time of day & severity

Crash mapping analysis shows that most incidents are concentrated along U.S., State, and Secondary routes rather than interstates. In fact, 77 percent of all crashes occur on non-interstate roadways, demanding the need for safety improvements beyond the interstate system. The crash dashboard can be found at https://www.arcgis.com/apps/dashboards/8cda9a34c51d4956a923a045063937ec, and a summary is provided in **Appendix C**.

Crashes by Year

Crash totals have increased over time, with a consistent upward trend during the last three full years of available data. The **peak year** for total crashes was **2024**, with **3,585 reported incidents**. In the first two months of 2025 alone, **549 crashes** were already recorded, continuing the upward trend.

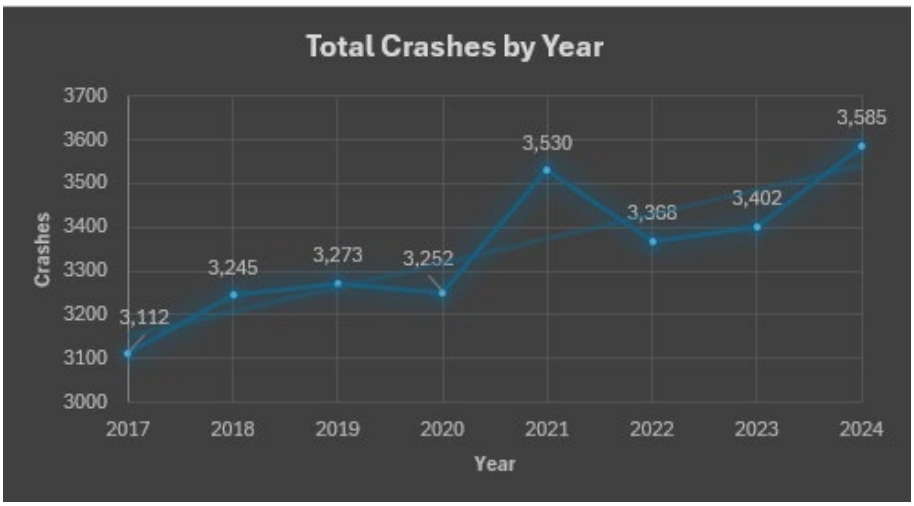

Figure 2. Total Crashes by Year within the City of Hampton

Crash Types

The most common crash types in the City of Hampton are **rear-end crashes (35 percent)** and **angle crashes (26 percent)**. Together, these two crash types account for **61 percent of all reported crashes**, indicating they are the predominant crash patterns within the city.

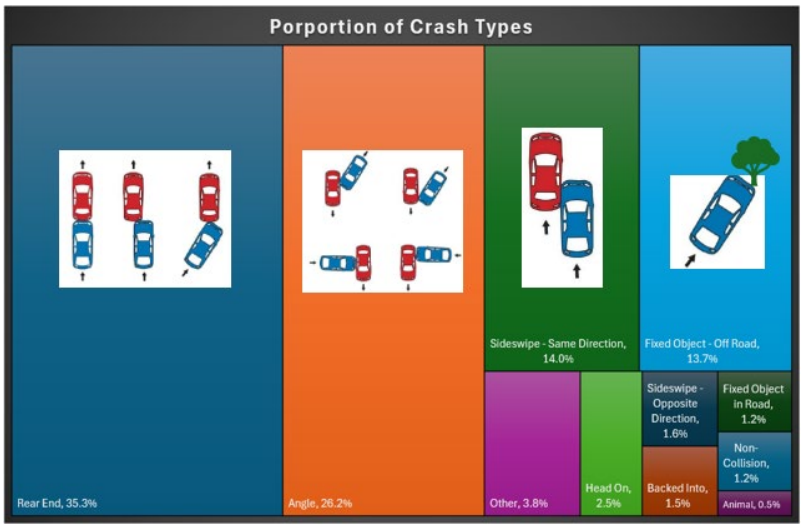

Figure 3. Proportion of Crash Types within the City of Hampton

Crash Severity

A focused analysis of **severe injury crashes**—defined as those resulting in fatalities or suspected serious injuries (K and A-level crashes)—reveals a more urgent safety issue. The City of Hampton accounted for **2,509 severe crashes**, the **highest** among all jurisdictions within the Hampton Roads District, representing **21 percent of all severe crashes** in the region. This includes **115 fatal crashes** and over **15,000 injury crashes**, placing Hampton **1st in both categories** across the district.

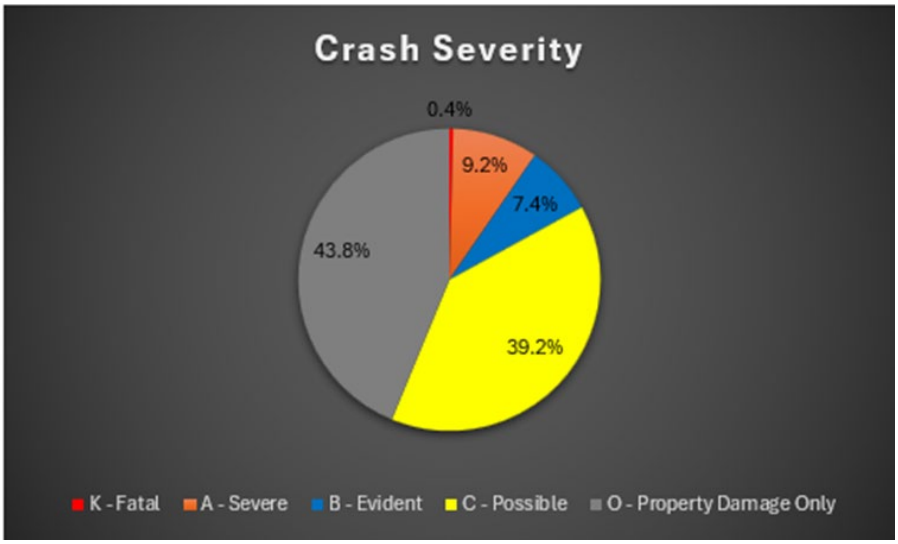

Figure 4. Crash Severities within the City of Hampton

Fatal and severe injury crashes account for approximately **10 percent of all reported crashes** in the City of Hampton. By contrast, the majority of crashes are Property Damage Only (PDO) crashes, which make up **44 percent** of the total crashes during the study period.

Crash heat maps show the highest concentration of severe crashes along major corridors and arterial routes, providing strong evidence that targeted safety improvements on key non-interstate routes could reduce both crash frequency and severity.

While severe crashes represent a small percentage of total collisions, they result in outsized harm to vulnerable road users and the community at large. Addressing these through a **Safe System Approach** will be essential to reducing fatalities and serious injuries within the city.

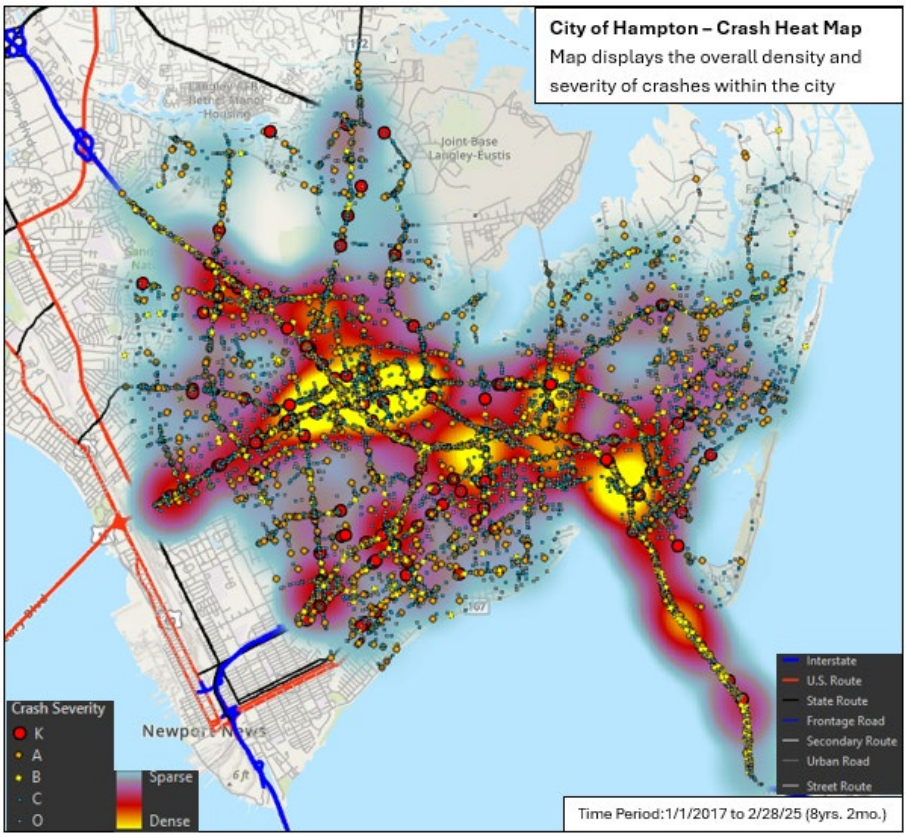

Figure 5. Crash Heat Map within the City of Hampton

Fatal Crash Analysis

Between January 2017 and February 2025, the City of Hampton experienced a total of **115 fatal crashes**, resulting in **119 fatalities**. On average, the City of Hampton records approximately **14 fatal crashes per year**.

Fatal crash trends have fluctuated over the study period. The **highest annual total was in 2023, with 20 fatal crashes**, while lower totals were observed in 2017 (7) and 2021 (11). Notably, the first two months of 2025 alone have already recorded **7 fatal crashes (5 in January and 2 in February)**, suggesting a concerning trend if rates persist.

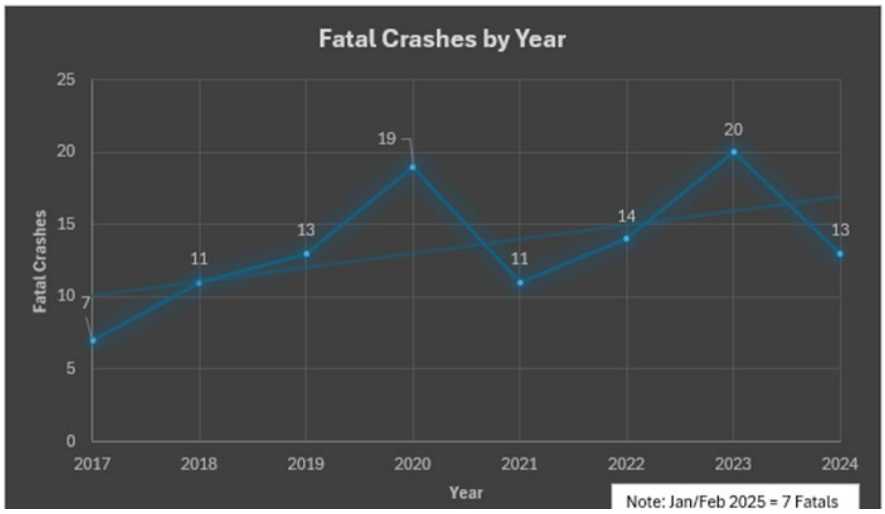

Figure 6. Fatal Crashes by Year within the City of Hampton

The most common fatal crash types in the City of Hampton are **fixed object–off road crashes (32 percent)** and **angle crashes (24 percent)**. Together, these two categories account for **56 percent of all fatal crashes**, indicating they are the predominant patterns in fatal crash outcomes.

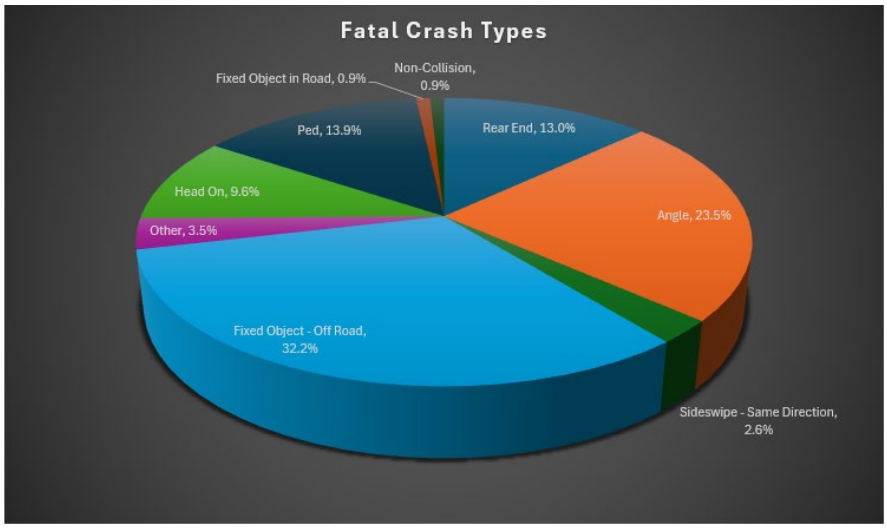

Figure 7. Fatal Crash Types within the City of Hampton

Location analysis shows that 25 percent of fatal crashes occurred on Interstate routes, including ramps, while the majority (67 percent) occurred at non-intersection locations. Among intersection-related fatal crashes, 47 percent took place at signalized intersections.

Geographically, the highest concentrations of fatal crashes were identified along **Mercury Boulevard** and **Pembroke Avenue**, highlighting these corridors as key safety concern areas within the City of Hampton.

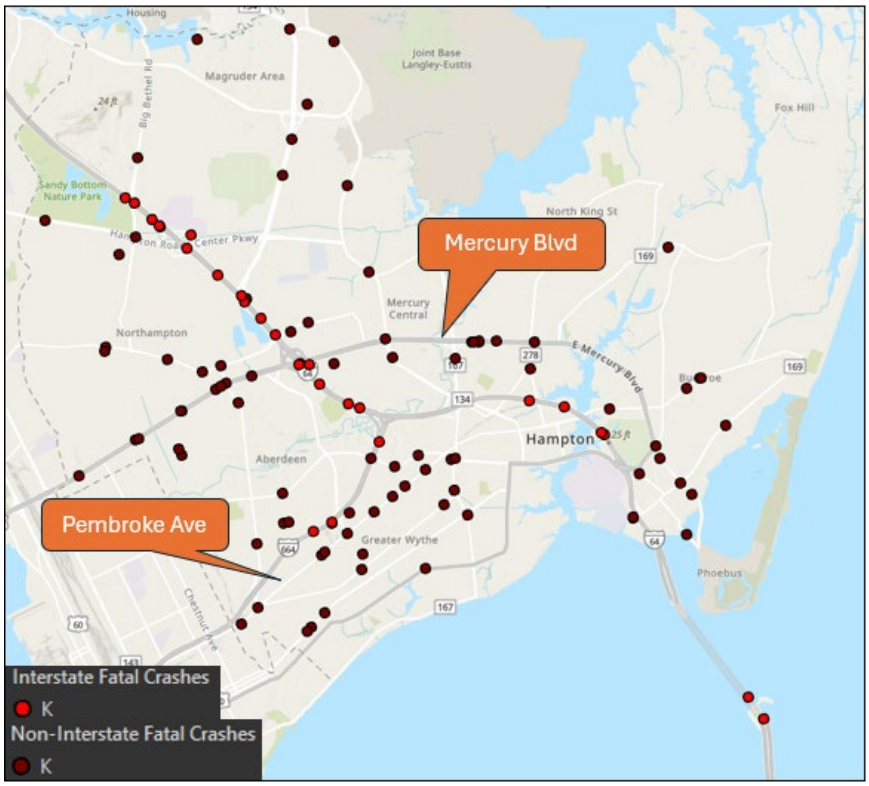

Figure 8. Fatal Crash Map within the City of Hampton

Approximately 50 percent of fatal crashes in Hampton occur during nighttime hours (7:00 p.m.–6:00 a.m.), indicating elevated risk during overnight travel. In addition, about 23 percent of fatal crashes take place during the evening peak period (3:00–7:00 p.m.), reflecting the influence of higher traffic volumes during commuter hours.

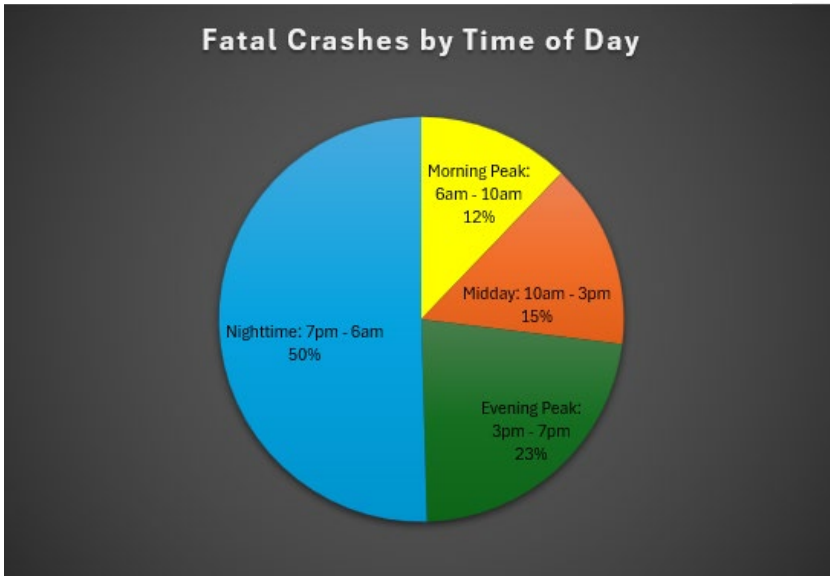

Figure 9. Fatal Crashes by Time of Day within the City of Hampton

Analysis of contributing factors shows that **speeding was involved in 51 percent of all fatal crashes**, making it the leading contributing factor. Additionally, **unbelted motorists were involved in 40 percent of fatal crashes**. Several crashes were found to involve **multiple contributing factors**, underscoring the complexity of conditions leading to fatal outcomes.

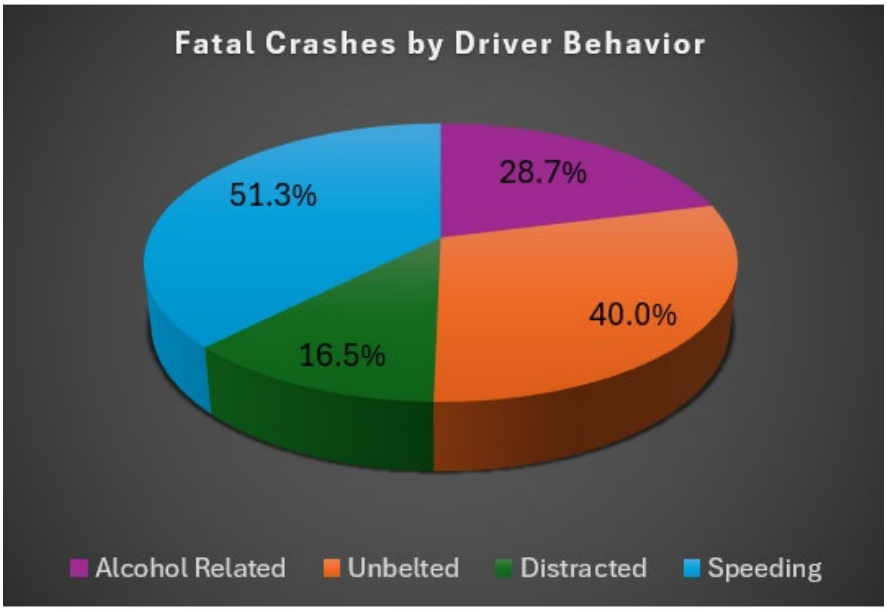

Figure 10. Fatal Crashes by Driver Behavior within the City of Hampton

The year 2020 represented the peak for fatal crashes involving alcohol (8 crashes), unbelted motorists (13 crashes), and speeding (15 crashes). Alcohol-related fatalities also peaked in both 2020 and 2023, with 8 crashes recorded in each year. In several instances, fatal crashes involved multiple contributing factors, highlighting the combined influence of risky driving behaviors.

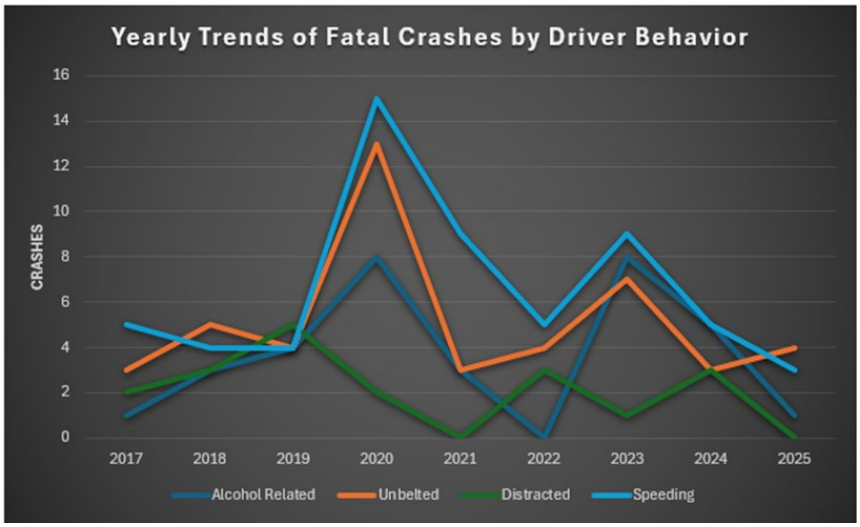

Figure 11. Yearly Trends of Fatal Crashes by Driver Behavior within the City of Hampton

Key Crash Locations

Analysis of the High Injury Network identified **2,624 fatal and severe injury crashes** between 2017 and early 2025, involving **3,122 people**. This equates to an average of approximately **322 fatal and severe crashes per year**.

The predominant crash types within this network are:

- **Angle crashes** – 33 percent
- **Rear-end crashes** – 19 percent
- **Fixed object–off road crashes** – 19 percent

Together, these three categories account for **71 percent of all fatal and severe crashes**, underscoring their significance in roadway safety outcomes.

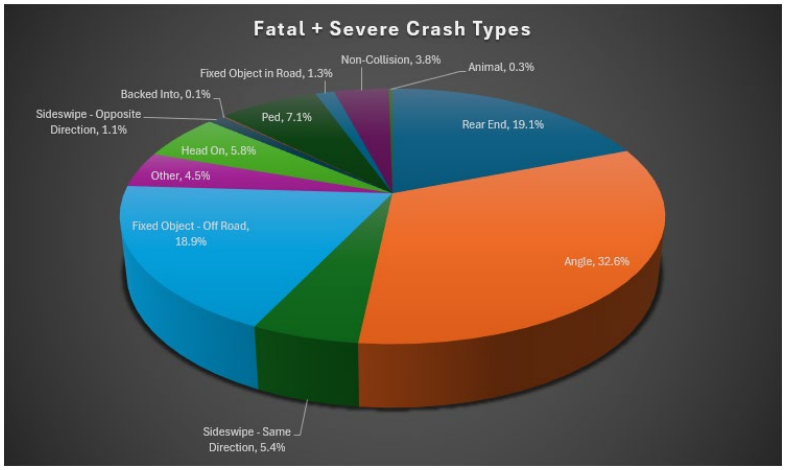

Figure 12. Fatal & Severe Crashes by Type within the City of Hampton

High Injury Network: Sections

An analysis of fatal and severe injury crashes across the City of Hampton produced a ranking of corridors and intersections based on three measures: **severity of all crashes, severity of bicycle and pedestrian crashes, and total crashes**. While overall crash totals are an important indicator, identifying locations with the **highest concentrations of fatal and severe injury crashes** is critical for prioritizing mitigation strategies and targeted safety improvements.

According to the VDOT Linear Referencing System (LRS), the City of Hampton contains **713 miles of roadway**. Of this total, **25 roadway sections—representing just 54 miles, or 8 percent of the network—account for a disproportionate share of the City's most severe crashes**. These segments contain:

- **51 percent of all fatal crashes**
- **47 percent of all severe crashes**
- **53 percent of all fatal and severe bicycle/pedestrian crashes**

This concentration highlights critical corridors where safety improvements could have the greatest impact.

Figure 13 and **Table 3** show the road segments ranked by the highest number of fatal and severe injury crashes.

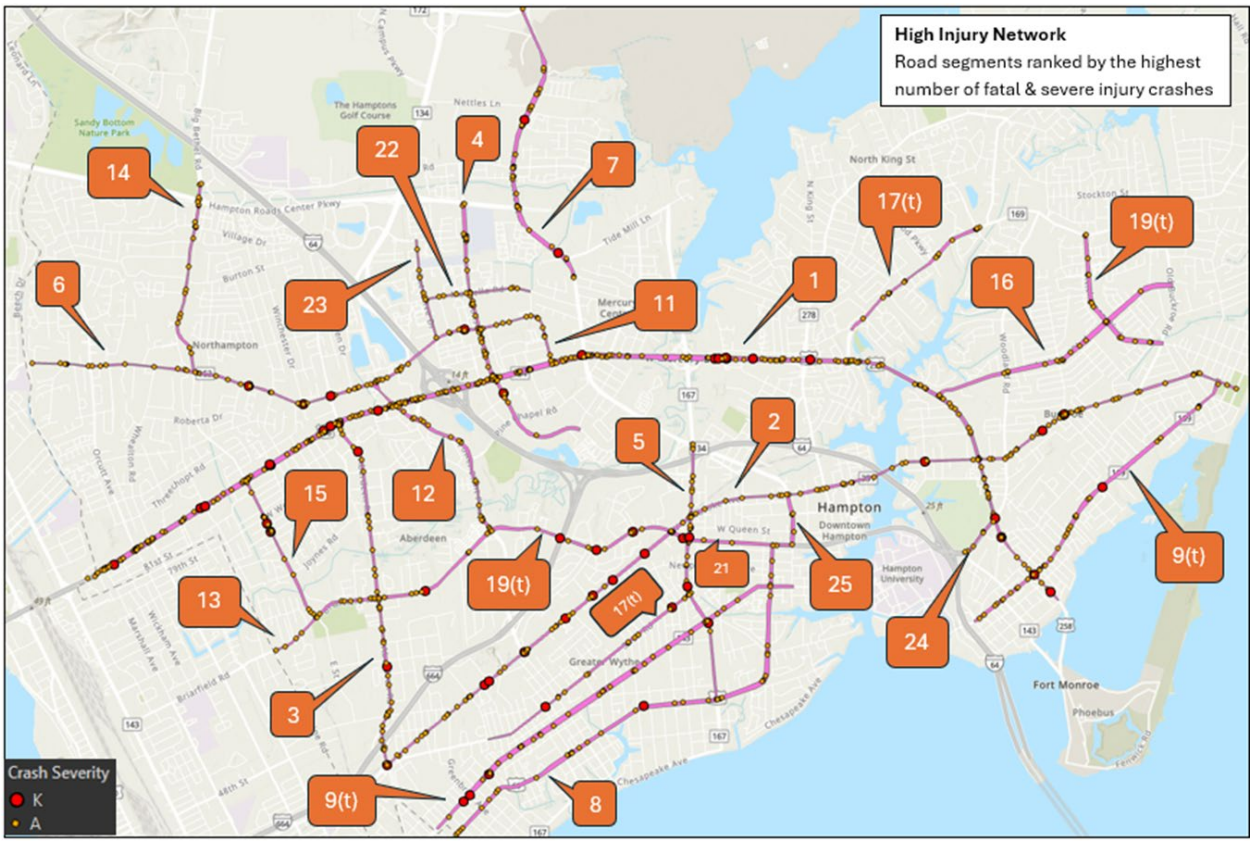

Figure 13. High Injury Network Locations

Table 3. High Injury Network Sections within the City of Hampton

Segment #	Route	From	To	Length (mi.)	Fatal (K) Crashes	Severe (A) Crashes	K+A Crashes	Severity (K+A) (Ranked)	Bike/Ped K+A Crashes	Bike/Ped Severity (K+A) (Ranked)	Total Crashes	Total Crashes (Ranked)

High Injury Network: Intersections

An analysis of fatal and severe injury crashes across the City of Hampton identified intersections with the **highest concentrations of severe outcomes**. The ranking table compares intersections by three measures: **severity of all crashes, severity of bicycle and pedestrian crashes, and total crashes**. These locations represent the most critical intersections for safety intervention. Implementing **systematic improvements at these sites** has the potential to mitigate crashes more broadly, given their similar configurations and traffic volumes.

Table 4 compares how each intersection ranks when considering the severity of all crashes, the severity of bike/pedestrian crashes, and total crashes. The purple-highlighted intersections are on Mercury Boulevard.

Thirteen of the top 20 intersections with fatal and severe injury crashes are located along Mercury Boulevard. These 20 intersections are signalized and collectively account for approximately 15% of the city's total fatal and severe injury crashes.

Figure 14 displays the intersections with the highest number of fatal and severe injury crashes.

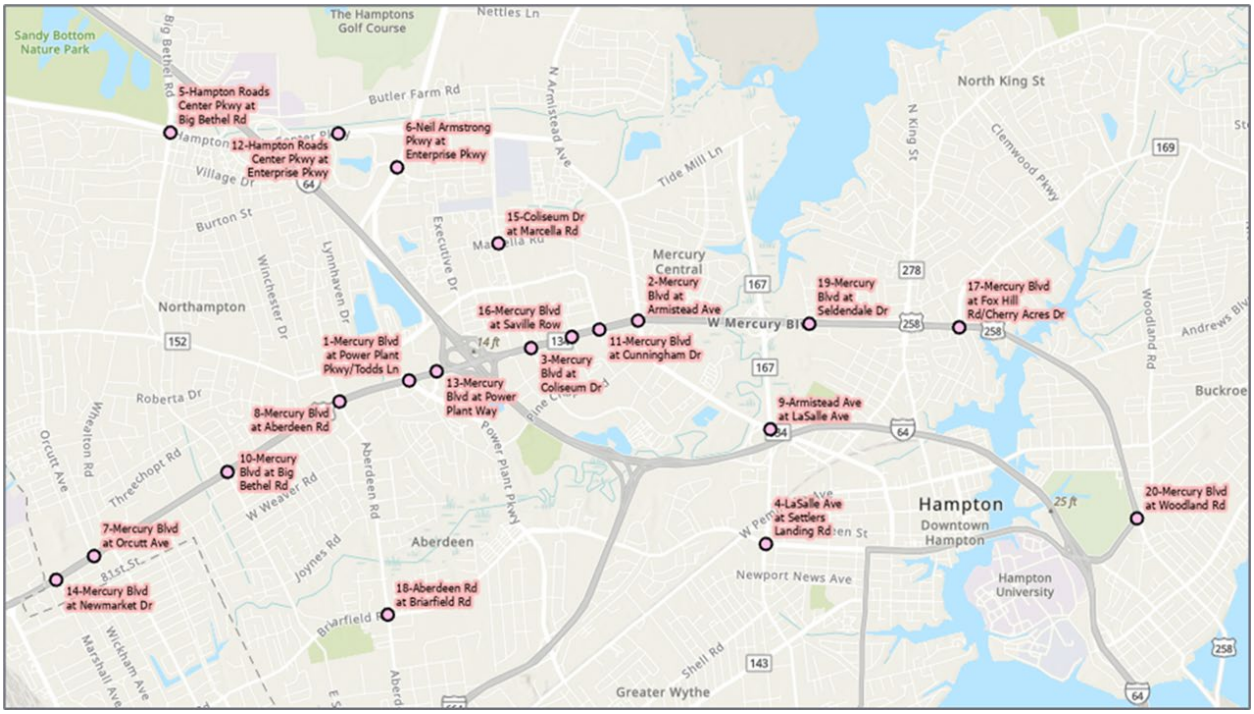

Figure 14. High Injury Network Intersections

Table 4. High Injury Network Intersections within the City of Hampton

Intersection #	Intersection	Fatal (K) Crashes	Severe (A) Crashes	K+A Crashes	Severity (K+A) (Ranked)	Bike/Ped K+A Crashes	Bike/Ped Severity (K+A) (Ranked)	Total Crashes	Total Crashes (Ranked)

High Injury Locations: Requested by the City of Hampton

During the project kick-off meeting in May 2025, the City of Hampton requested a crash analysis for the following locations:

- Shell Road
- Hampton Roads Transit (HRT) Route 101
- Hampton Roads Transit (HRT) Route 114

Shell Road

Shell Road is primarily residential, carries an average daily traffic of 3,200 vehicles (2022 ADT) between Powhatan Parkway and Lasalle Avenue, includes three signalized intersections, and partially aligns with HRT Route 103.

Crash data for the 2.8-mile segment of Shell Road (Old Aberdeen Rd to Newport News Ave) shows angle crashes as the most common type, accounting for 43% of all crashes. Two fatal crashes occurred: one near Chesterfield Rd. involving speed and alcohol, and one near Fairland Ave. related to alcohol. Additionally, there were 5 pedestrian-related crashes (2 A-injury) and 4 bicycle-related crashes (2 A-injury).

Figure 15. Shell Road Crash Map

Table 5. Crashes by Severity along Shell Road

Crashes by Severity along Shell Road						
Year	K - Fatal	A - Severe	B - Evident	C - Possible	O - Property Damage Only	Total
2017	1	1	3	7	3	15
2018	0	4	0	5	3	12
2019	0	7	2	2	4	15
2020	1	3	1	9	5	19
2021	0	4	1	19	5	29
2022	0	2	2	8	3	15
2023	0	0	2	5	3	10
2024	0	3	1	10	5	19
2025	0	1	0	1	0	2
Total	2	25	12	66	31	136
Percent	1.5%	18.4%	8.8%	48.5%	22.8%	100%

Hampton Roads Transit (HRT) Route 101

Route 101, primarily along Kecoughtan Rd, connects Newport News to Downtown Hampton. Along this corridor, there were 6 pedestrian-related and 3 bicycle-related crashes, with 3 resulting in severe (A) injuries.

Hampton Roads Transit (HRT) Route 114

HRT Route 114, primarily along Mercury Blvd, serves retail areas and the Hampton Coliseum. Along this route, there were 63 pedestrian-related and 31 bicycle-related crashes, resulting in 8 fatal (K) injuries and 47 severe (A) injuries.

Crash data was analyzed for all pedestrian and bike-related crashes along HRT Routes 101 & 114, as shown in **Figure 16**.

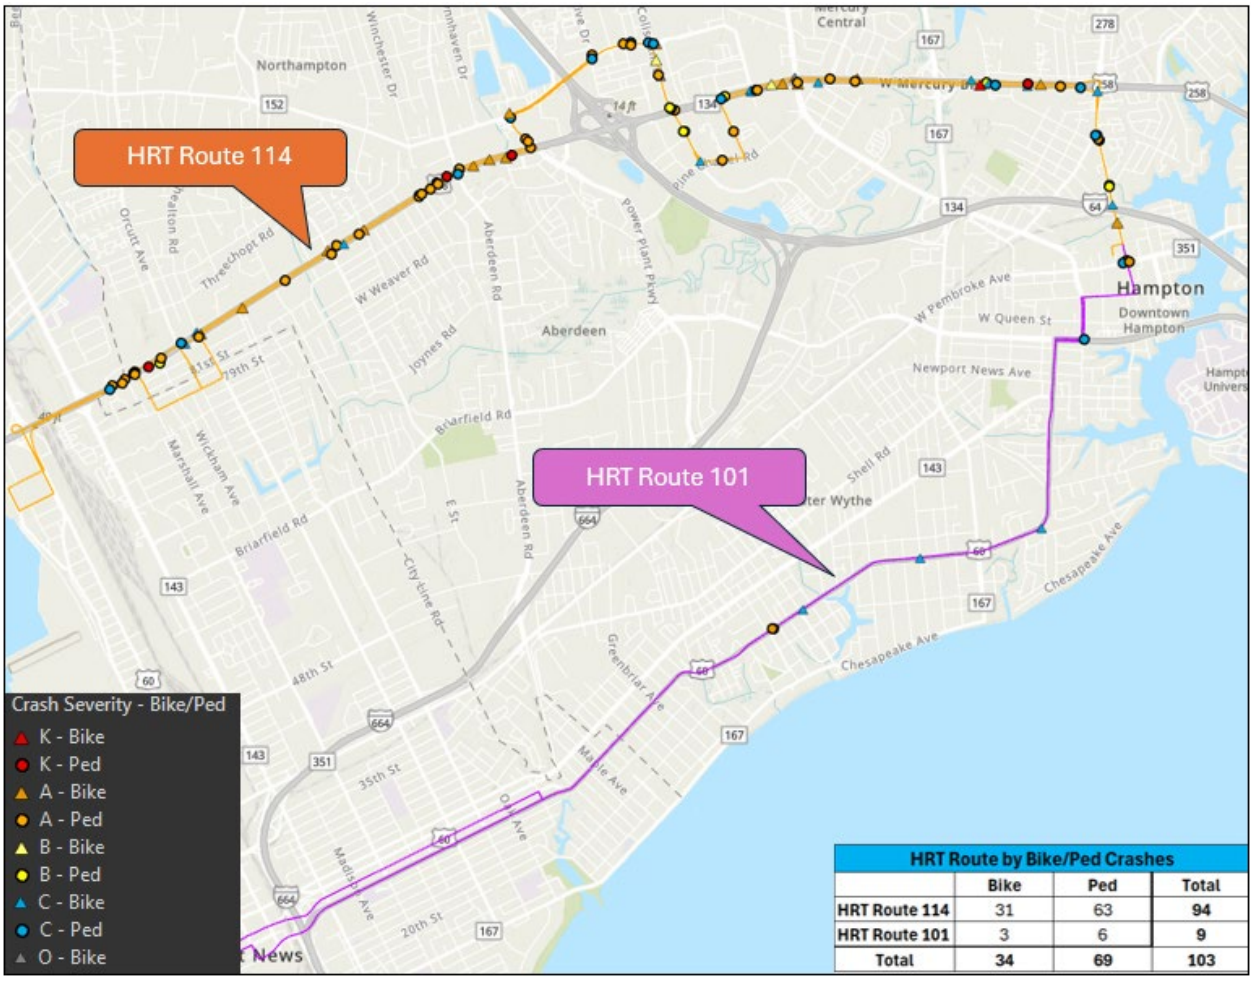

Figure 16. Crash Map for HRT Route 101 and HRT Route 114

Vulnerable Road Users

The Federal Highway Administration (FHWA) defines a vulnerable road user as a nonmotorist with a fatality analysis reporting system (FARS) person attribute code for pedestrian, bicyclist, other cyclist, and person on personal conveyance or an injured person that is, or is equivalent to, a pedestrian or cyclist as defined in the ANSI D16.1-2007. A vulnerable road user may include people walking, biking, or rolling. A vulnerable road user:

- Includes a highway worker on foot in a work zone, given that they are considered pedestrians
- Does not include a motorcyclist

Crash data was analyzed with a focus on vulnerable road users, using key definitions and reporting practices from police records to ensure consistency and accuracy in identifying these user groups.

According to the FR 300 Crash Report Manual (Virginia State Crash Report Training Manual), a pedestrian is defined as a person who is not an occupant of a motor vehicle in transport. A pedestrian includes:

- A person who is adjacent to the motor vehicle, regardless of their actions
- A person riding a personal conveyance device
- A person walking, running, jogging, hiking, sitting, or lying within the trafficway
- Persons in buildings

According to the FR 300 Crash Report Manual (Virginia State Crash Report Training Manual), bicycle-related crashes are coded as a bicycle, mini-bike, trail bike, or animal-drawn vehicle, when involved with a motor vehicle should be recorded as a vehicle in the crash report. Note that when a person involved in a crash is on a bicycle, the person riding the bicycle should always be recorded as a bicyclist/driver rather than a pedestrian. A person walking a bike should be recorded as a pedestrian.

Pedestrian & Bicycle Crash Overview

There were 505 total pedestrian and bicycle crashes, with 265 (52%) resulting in fatal (K) or severe (A) injuries. Of these serious crashes, 63% occurred at intersections, 44% at night, and 11% involved alcohol.

Figure 17 illustrates the fatal & severe pedestrian/bicycle crashes in the vicinity of public parks, community centers, schools, and hospitals.

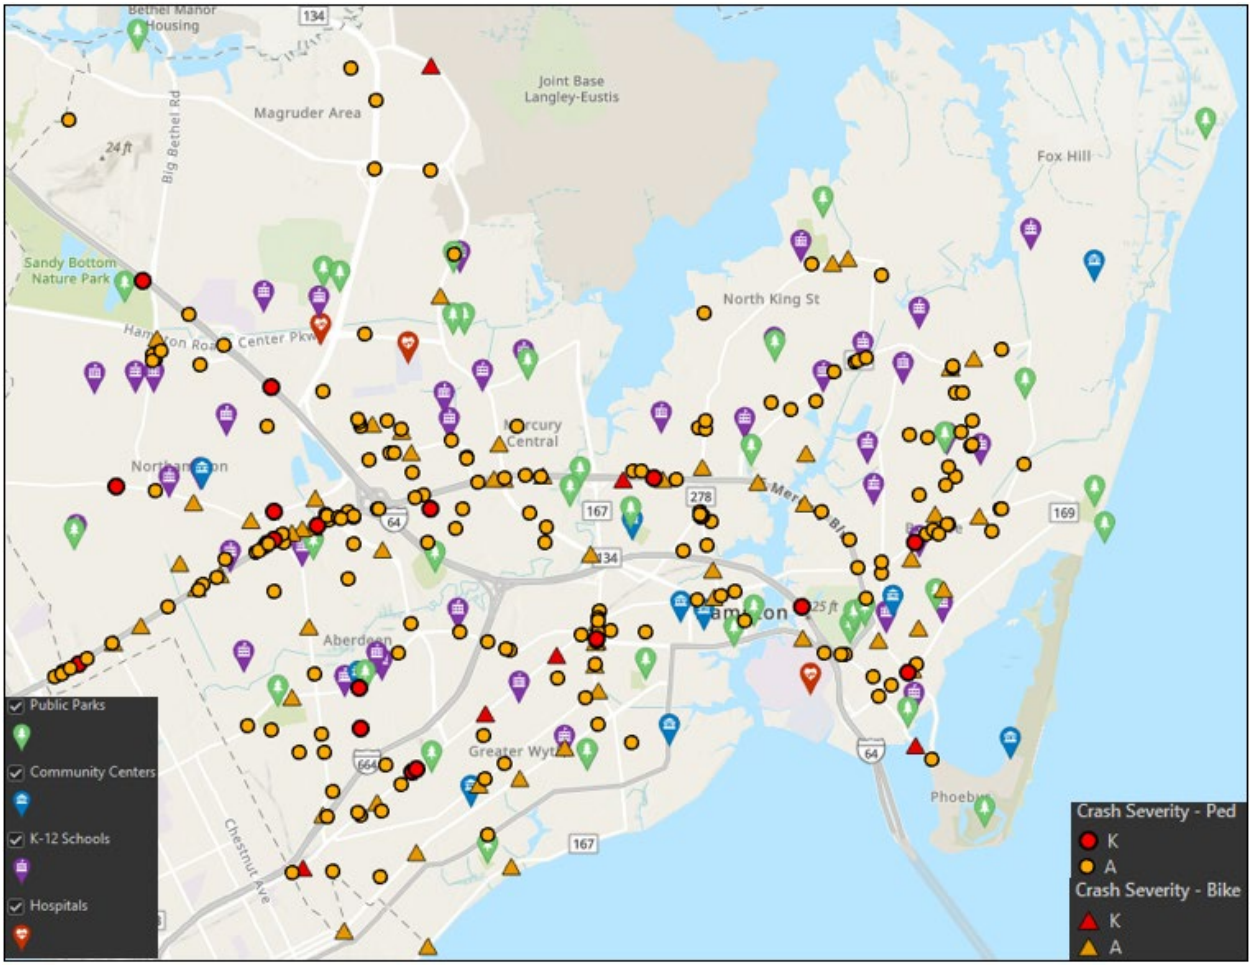

Figure 17. Severe & Fatal Bike/Pedestrian Crashes in the Vicinity of Public Parks, Community Centers, Schools, & Hospitals

Pedestrians

A total of 345 pedestrian-related crashes occurred, all resulting in injury or fatality. Nineteen were fatal, with 2022 recording the highest number (6). At least one pedestrian fatal crash occurred each year. Severe crashes accounted for 181 incidents (52%). In January and February 2025, there were 10 pedestrian crashes, including 3 fatal and 1 severe injury, representing 3 of the 7 total fatal crashes that year.

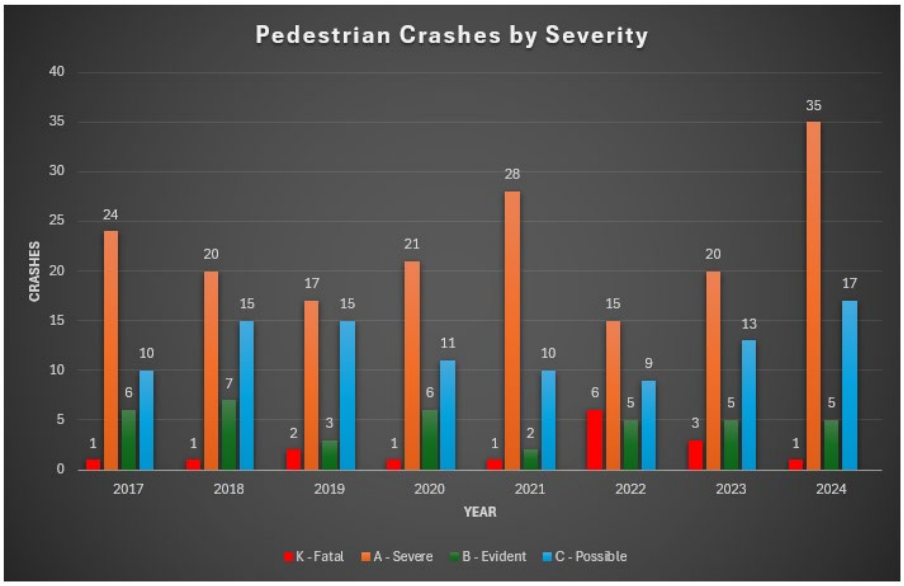

Figure 18. Pedestrian Crashes by Severity

Bicyclists

A total of 160 bicycle-related crashes occurred, with 98% resulting in injury or fatality. Seven crashes were fatal, peaking in 2023 with two. At least one fatal bicycle crash occurred annually from 2019 to 2024. Severe crashes accounted for 58 incidents (36%). In January and February 2025, there were 4 bicycle crashes, including 2 with severe injuries.

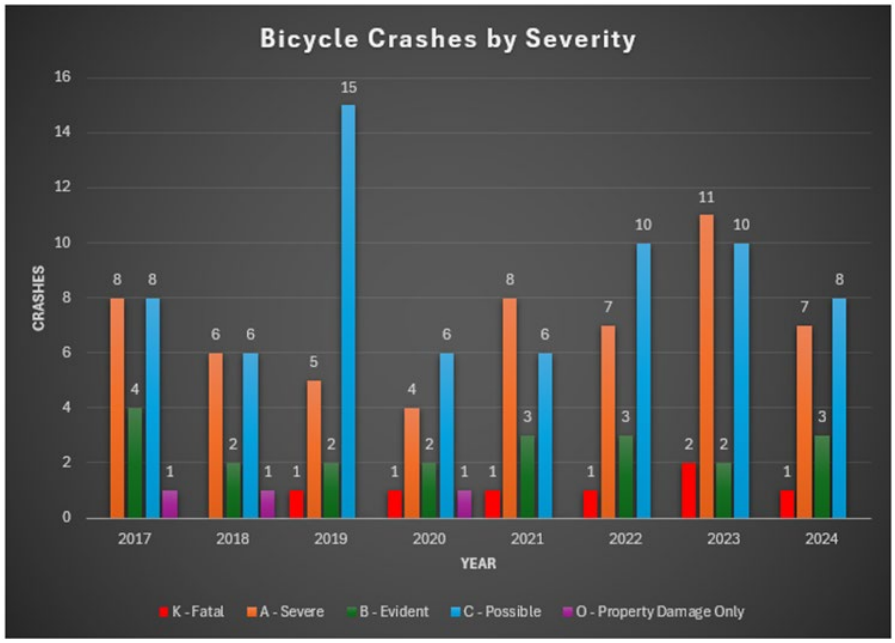

Figure 19. Bicycle Crashes by Severity

Target User Groups

The target user groups for the City of Hampton include:

- **Large/Heavy Vehicles:** Crashes involving these vehicles often result in fatal or severe injuries, largely due to their greater mass and longer stopping distances.
- **Motorcycles:** Speed is often a contributing factor in motorcycle crashes, and the lack of physical protection for riders frequently leads to fatal or severe injuries.
- **Senior Drivers (65+ years of age):** Older drivers may experience changes in physical fitness, vision, attention, and reaction time. Declines in these areas can reduce driving safety and increase crash risk.
- **Young Drivers (15-20 years of age):** Younger drivers often lack experience and have not yet developed the skills needed to operate a vehicle as responsibly or consistently as more experienced adults.

Crashes involving motorcycles, large/heavy vehicles, senior drivers, and young drivers account for 41% of all crashes and 48% of fatal and severe crashes. Motorcycle crashes are especially severe, with 59% resulting in fatal or serious injury. Senior and young drivers show similar crash patterns in both total and fatal crashes, while crashes involving large/heavy vehicles and senior drivers have steadily increased from 2020 to 2024.

Table 6. Target User Group Crashes by Severity

Target User Group Crashes by Severity						
User Group	**K - Fatal**	**A - Severe**	**B - Evident**	**C - Possible**	**O - Property Damage Only**	**Total**
Large/Heavy Vehicles	9	116	133	555	731	1544
Motorcycles	18	272	85	69	49	493
Senior Drivers (65+)	19	443	287	2125	1733	4607
Young Drivers (15-20)	17	358	368	1803	2005	4551
Total	**63**	**1,189**	**873**	**4,552**	**4,518**	**11,195**

Population Profile Considerations

Household income values were derived from the Hampton Roads Transportation Planning Organization (HRTPO) Regional Travel Demand Model V2 Technical Report (VDOT, January 2020, based on 2015 survey data) and adjusted for inflation using 2025 U.S. Bureau of Labor Statistics data. **Table 7** outlines the household groups adjusted for inflation in 2025.

Table 7. Average Household Income by Household Group Adjusted for Inflation in 2025

	Average Household Income ($)	
Household Group	**HRTPO Report (2015 Survey)**	**Adjusted for Inflation (2025)**
Group 1	13,343	18,088
Group 2	39,799	53,952
Group 3	70,568	95,663
Group 4	110,960	150,419

Group 3 households ($54,001–$95,700) accounted for the largest share of fatal and severe crashes, representing 55% of the total. Overall, **approximately 94% of fatal and severe crashes occurred in areas with household incomes below $95,700.**

Table 8. Fatal & Severe Crashes by Household Group

Category	K	% of K	K+A	% of K+A
Group 1	0	0.0%	0	0.0%
Group 2	44	38.3%	997	38.0%
Group 3	64	55.7%	1454	55.4%
Group 4	4	3.5%	94	3.6%
Totals*	**112**	**97.4%**	**2545**	**97.0%**
***do not add up to 100% due to the I-64 tunnel segment not included**				

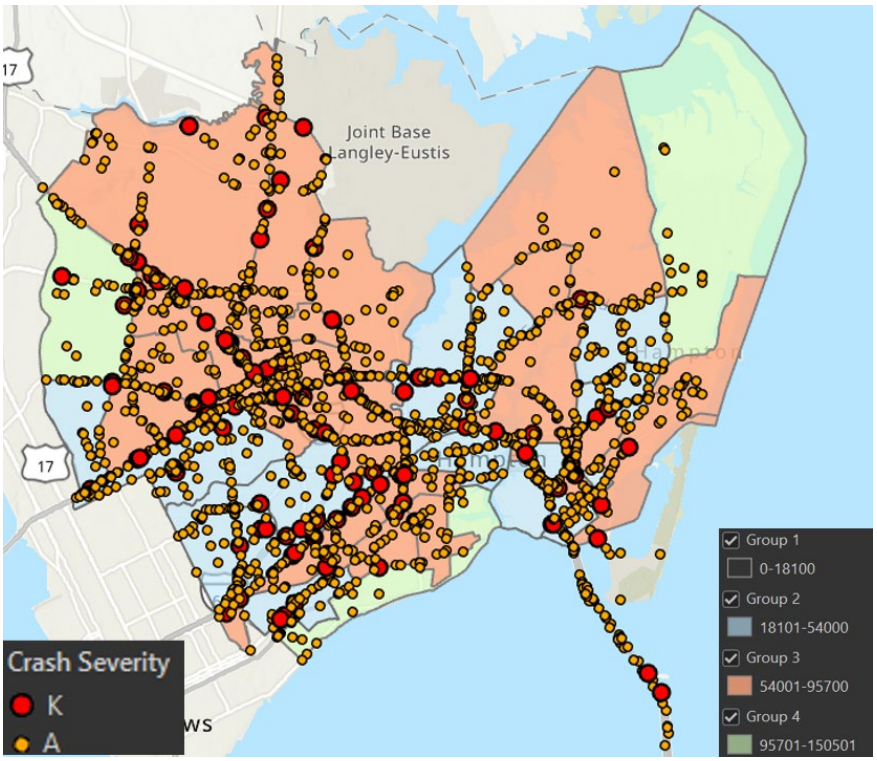

Figure 20. Fatal & Severe Crashes by Income Group

Recommendations & Improvements

Traffic Safety Recommendations Toolkit

The Traffic Safety Recommendations Toolkit provides a variety of safety countermeasures that have been proven to provide traffic safety benefits. This toolkit aims to identify the most effective treatments for a range of road safety concerns that are also suitable for all mode users. Implementation of any of these countermeasures or a combination of countermeasures would yield a reduction in the number of crashes, including fatal and serious injury crashes. These countermeasures also align with the US Department of Transportation's Safe System Approach (SSA) to address roadway safety. Considerations of the listed countermeasures were based on the existing traffic safety data, existing traffic safety risk factors, and the City of Hampton's Vision Zero Traffic Safety Community Survey. This toolkit is not a comprehensive list of all the potential countermeasures that may be considered.

The Traffic Safety Recommendations Toolkit consists of three main improvement types.

1. **Systemic Improvements** – Involves widely implemented improvements based on high-risk roadway features correlated with specific severe crash types. These enhancements are usually low-cost strategies and typically have noticeable safety improvements.
2. **"Hot Spot"/Site-Specific Improvements** – Site-specific locations with the highest crash frequency. These improvements may consist of minimal investment projects but can also include higher cost modifications that are funded through grants, state highway safety improvement programs, or capital improvement funds.
3. **Policy Strategy (Non-Engineering) Improvements** – Changes that involve adoption/approval by city councils, agencies, etc., use for multi-organization partnerships, or ideas to be studied further.

Recommendation matrices were developed to visually complement the Traffic Safety Recommendations Toolkit. The systemic and policy strategy improvement matrices can be found in **Appendix D**. The "Hot Spot"/Site-Specific Improvements matrix can be found in the "Hot Spot"/Site-Specific Improvements section of this report.

Systemic Improvements

The following systemic improvements can be applied at previously determined high injury network (HIN) locations to maximize safety benefits.

High-Visibility Signal Backplates (HVSBs) – HVSBs added to a traffic signal head improve visibility of the illuminated signal face through a controlled-contrast background. Signal heads that have backplates with retroreflective borders are more visible in day and night conditions. HVSBs are a proven countermeasure by the Federal Highway Administration (FHWA) and noted to reduce total crashes by 15%. This improvement is listed in the Crash Modification Factors (CMF) Clearinghouse as countermeasure ID 1410.

HVSBs can be deployed at existing HIN signalized intersection locations where backplates are present but are absent of retroreflective borders. HVSBs align with the SSA objective of safer roads and generally have a short time frame to implement and are relatively low-cost.

Figure 21. Example of High-Visibility Signal Backplates (HVSBs) in Hampton, VA (Source: Google Maps)

Fixed Unit Speed Safety Cameras – Speed safety cameras use speed measurement devices to detect speeding and capture photographic or video evidence of vehicles that are violating a set speed threshold. Speed safety cameras are a proven countermeasure by the FHWA, and Fixed Unit Speed Safety Cameras are noted to reduce total crashes by 54% and injury crashes by 47% on urban principal arterials. This improvement is listed in the CMF Clearinghouse as countermeasure IDs 2915 & 2921.

Hampton's Vision Zero Traffic Safety Survey indicated "speeding/aggressive driving" as the top safety issue of concern. In addition to school/work zones, Fixed Unit Speed Safety Cameras can be installed at existing HIN locations. Speed Safety Cameras align with the SSA objective of safer speeds. These cameras generally have a short-to-mid time frame to implement and have a low-mid associated cost.

Figure 22. Example of a Speed Safety Camera in Arlington, Virginia (Source: Arlington, VA)

Dynamic Speed Feedback Signs – Dynamic Speed Feedback Signs display current vehicle speeds to drivers, encouraging drivers to adjust speed to safe levels, deterring speeding, and encouraging behavioral change. This countermeasure is noted to reduce total crashes by 5% and is listed in the CMF Clearinghouse as countermeasure ID 6885. Other states have had success with Dynamic Speed Feedback Signs and reported higher crash reduction numbers. The North Carolina Department of Transportation (NCDOT) expects this improvement to have up to a 46% crash reduction.

Dynamic Speed Feedback Signs are most effective in short distance/targeted areas and can be installed at existing HIN locations. These signs can also serve as temporary, portable use via trailers. Speed feedback

signs align with the SSA objective of safer speeds and generally have a short time frame to implement, and are relatively low cost.

Figure 23. Example of a Dynamic Speed Feedback Sign in Maryland (Source: Montgomery County, MD)

Flashing Yellow Arrow (FYA) – FYA is a traffic signal indication for left turns that allows a driver to proceed when oncoming traffic is clear. This measure specifically addresses the issues related to left turn crashes and helps drivers avoid confusion by signaling that caution is needed to determine if there is a sufficient gap in oncoming traffic. This countermeasure is noted to reduce left-turning crashes by 19% when converting from a protected/permissive left turn to FYA and 37% when converting from a permissive left turn to FYA. These are listed in the CMF Clearinghouse as countermeasure IDs 4177 & 4175, respectively.

FYAs can be deployed at existing HIN signalized intersection locations where existing permissive left-turn phasing or protected-permissive left-turn phasing is present. FYAs align with the SSA objective of safer roads and generally have a short time frame to implement and are relatively low-cost.

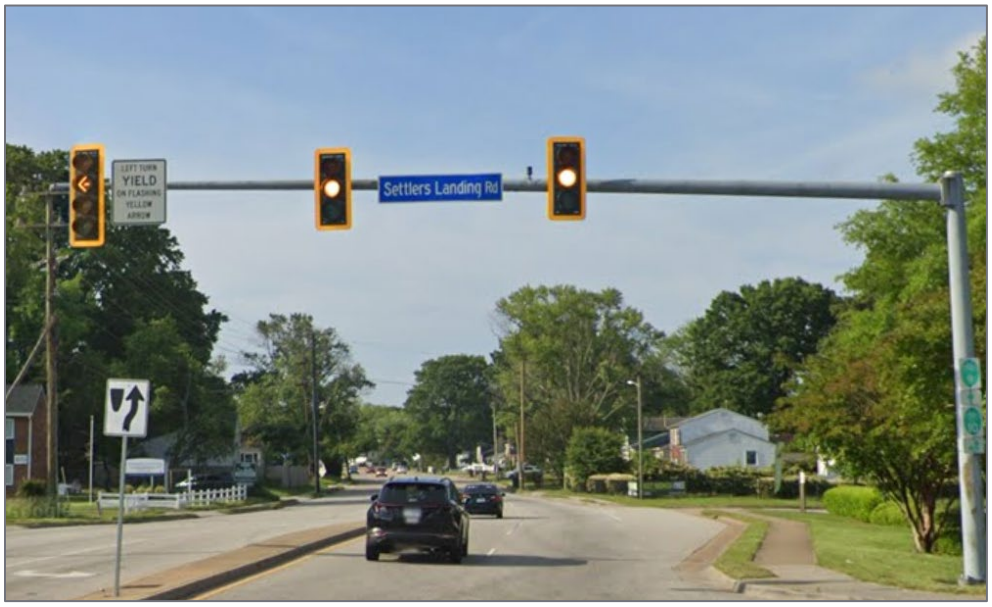

Figure 24. Example of Flashing Yellow Arrow (FYA) in Hampton, Virginia (Source: Google Maps)

Crosswalk Visibility Enhancements – Crosswalk visibility enhancements are comprised of High-Visibility Crosswalks, Crosswalk Lighting, and Enhanced Signing and Pavement Markings. All of these enhancements are proven countermeasures by the FHWA. **High-Visibility Crosswalks** use patterns (i.e., bar pairs, continental, ladder) that are visible to both the driver and pedestrian from farther away compared to traditional transverse line crosswalks. High-Visibility Crosswalks are noted to reduce pedestrian injury crashes up to 40%. This improvement is listed in the CMF Clearinghouse as countermeasure ID 4123.

Crosswalk Lighting is used to illuminate with positive contrast to make it easier for a driver to visually identify the pedestrian. Crosswalk Lighting is noted to reduce pedestrian injury crashes up to 42%. This improvement is listed in the CMF Clearinghouse as countermeasure ID 436. **Enhanced Signing and Pavement Markings** are used to indicate where a driver should stop or yield to pedestrians. Enhanced Signing and Pavement Markings are noted to reduce pedestrian crashes by up to 25%. This improvement is listed in the CMF Clearinghouse as countermeasure ID 9017.

Hampton's Vision Zero Traffic Safety Survey indicated "unsafe intersections or driveways" as the second most cited safety issue of concern. Crosswalk visibility enhancements can be deployed at existing HIN intersection crosswalk locations, midblock pedestrian crossings, and uncontrolled intersections. These enhancements align with the SSA objectives of safer people and safer roads. Additionally, these modifications generally have a short time frame to implement and are relatively low-cost.

Figure 25. Example of Crosswalk visibility enhancements in Hampton, Virginia (Source: Google Maps)

Optimized Signal Timing – Optimizing Signal Timing is the adjustment of traffic signals based on the appropriate speed limit, which can reduce congestion, improve traffic flow, and enhance safety by promoting safe speeds. Optimized signal timing encourages safer driving behavior and can be preempted for emergency response. This improvement is noted to reduce crashes by 21% and is listed in the CMF Clearinghouse as countermeasure ID 9868.

Hampton's Vision Zero Traffic Safety Survey indicated "poor signal coordination" as the top mobility issue that is typically experienced when traveling in the City. Optimized Signal Timing can be implemented at existing HIN locations and other areas that experience noticeable congestion. This alteration aligns with

the SSA objectives of safer roads, safer speeds, and post-crash care. Signal timing optimization generally has a short to mid time frame to implement and has a low to mid associated cost.

Figure 26. Example of Optimized Signal Timing (Three intersections with green traffic signals synchronized) (Source: Google Maps)

Sidewalks – Sidewalks are paved surfaces designated for pedestrian use parallel to the roadway, generally separated from the traffic lanes by a curb. The installation of a sidewalk where currently none exists creates a safe and separate space for pedestrians to utilize along the roadway. Sidewalks are a proven countermeasure by the FHWA and noted to reduce crashes involving pedestrians walking along roadways by 65-89%. This crash reduction factor is documented in the *Update of Florida Crash Reduction Factors and Countermeasures to Improve the Development of District Safety Improvement Projects. Florida DOT (2005)*[5]*.*

Hampton's Vision Zero Traffic Safety Survey indicated "missing or inadequate sidewalks or curbs" as the third most cited safety issue of concern. The survey also indicated that a third of respondents use walking as their mode of travel within the City of Hampton. Sidewalks can be installed at existing HIN intersection crosswalk locations and areas where there are gaps in the existing sidewalk network. Sidewalks align with the SSA objective of safer people and generally have a short-to-mid time frame to implement and have a mid-high associated cost.

[5] https://fdotwww.blob.core.windows.net/sitefinity/docs/default-source/research/reports/fdot-bd015-04-rpt.pdf

Figure 27. Example of a Sidewalk along a roadway in Hampton, Virginia (Source: Google Maps)

Lighting – Lighting enhances visibility at intersections and along roadways to reduce nighttime crashes by illuminating potential hazards and increasing driver and pedestrian awareness. Adequate lighting can provide additional benefits such as personal security for pedestrians, wheelchair and other mobility device users, bicyclists, and transit users. Lighting is a proven countermeasure by the FHWA and is listed in the CMF Clearinghouse. Lighting improvements are noted to reduce crashes up to 42% for nighttime injury pedestrian crashes at intersections (CMF ID 436), 33% for nighttime crashes at rural intersections (CMF ID 2376), 38% at urban intersections (CMF ID 433), and 28% for nighttime injury crashes on rural and urban highways (CMF ID 192).

Lighting can be applied at existing HIN locations. Lighting applications can also be installed at other inadequate lighting areas continuously along sections of road and at spot locations such as intersections and pedestrian crossings. Lighting improvements align with the SSA objectives of safer people and safer roads, and generally have a mid-to-long time frame to implement and have a mid to high associated cost.

Figure 28. Example of an adequately lighted intersection (Source: NCDOT)

Leading Pedestrian Interval (LPI) – A LPI allows pedestrians to enter the crosswalk at an intersection 3-7 seconds before vehicles are given a green indication. Pedestrians can better establish their presence in the crosswalk before vehicles have priority to turn right or left. LPIs are especially beneficial for pedestrians who may be slower to start into the intersection, such as someone using a wheelchair or a walking aid. LPIs are a proven countermeasure by the FHWA and are noted to reduce pedestrian crashes by 13%. This improvement is listed in the CMF Clearinghouse as countermeasure ID 9918.

Leading Pedestrian Intervals can be deployed at existing HIN intersection crosswalk locations and align with the SSA objective of safer people. This improvement generally has a short-to-mid time frame to implement and has a low-mid associated cost.

Figure 29. Example of a crosswalk where a signal can be modified with an LPI, in Hampton, VA (Source: Google Maps)

"Hot Spot"/Site Specific Improvement Locations

The locations to consider for the following "Hot Spot"/Site-Specific improvements are a subset of previously determined high injury network (HIN) locations. Although the majority of crashes occurred on Mercury Blvd., the subset of locations focuses on the top high-injury intersections along Mercury Blvd, but also expands to other high-injury intersection locations to capture the broader geography of the city. These site-specific locations make up 10% of the total fatal and severe crashes in the City of Hampton. The Systemic Improvements intends to tackle a larger number of deficiencies uniformly, while the goal of the "Hot Spot" improvement is to mitigate detailed issues at specific locations. **Table 9** and **Figure 30** display the "Hot Spot"/Site-Specific locations for consideration.

Table 9. "Hot Spot"/Site Specific Locations

"Hot Spot"/Site-Specific Locations			
1	Mercury Blvd at Todds Ln/Power Plant Pkwy	7	Neil Armstrong Pkwy at Enterprise Pkwy
2	Mercury Blvd at Coliseum Dr	8	LaSalle Ave at Settlers Landing Rd
3	Mercury Blvd at Aberdeen Rd	9	Coliseum Dr at Marcella Rd
4	Mercury Blvd at Armistead Ave	10	Hampton Roads Center Pkwy at Enterprise Pkwy
5	Hampton Roads Center Pkwy at Big Bethel Rd	11	Aberdeen Rd at Briarfield Rd
6	Armistead Ave at LaSalle Ave	12	Shell Rd from G St to LaSalle Ave

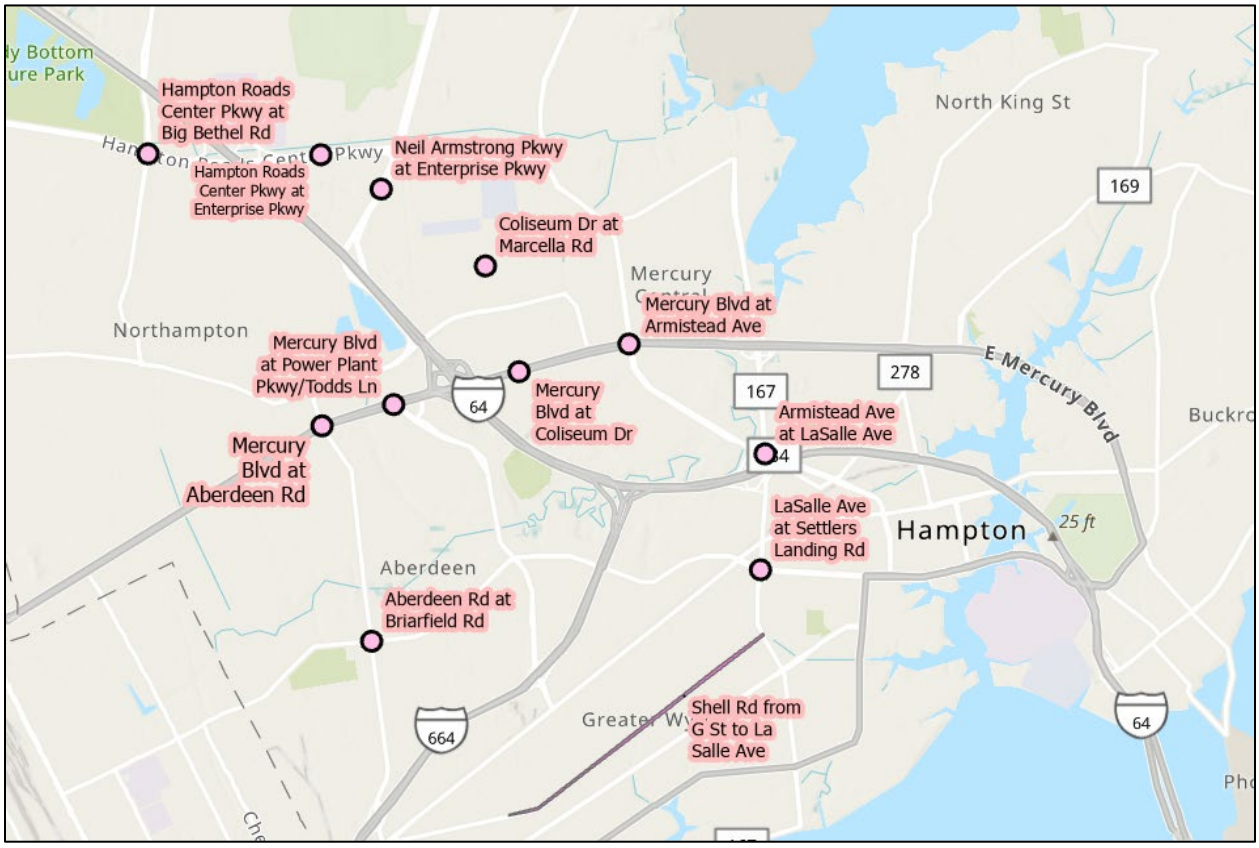

Figure 30. Map of "Hot Spot"/Site-Specific Locations

Reduced Conflict Intersection (RCI) – RCIs reconfigure intersections to limit conflict points, reducing crash potential, and improving safety. RCIs are comprised of Restricted Crossing U-turn (RCUT) and Median U-turn (MUT). A conventional intersection has 32 conflict points compared to a full MUT, which has 16 conflict points.

RCIs are a proven countermeasure by the Federal Highway Administration (FHWA), and converting a signalized intersection to a signalized RCUT is noted to reduce fatal and injury crashes by 22%. This improvement is listed in the Crash Modification Factors (CMF) Clearinghouse as countermeasure ID 9985. Converting a signalized intersection to a signalized MUT is noted to reduce fatal and injury crashes by 30%. This improvement is listed in the CMF Clearinghouse as countermeasure ID 10867. RCIs align with the Safe

System Approach (SSA) objective of safer roads. This improvement generally has a mid-to-long time frame to implement and has a mid to high associated cost.

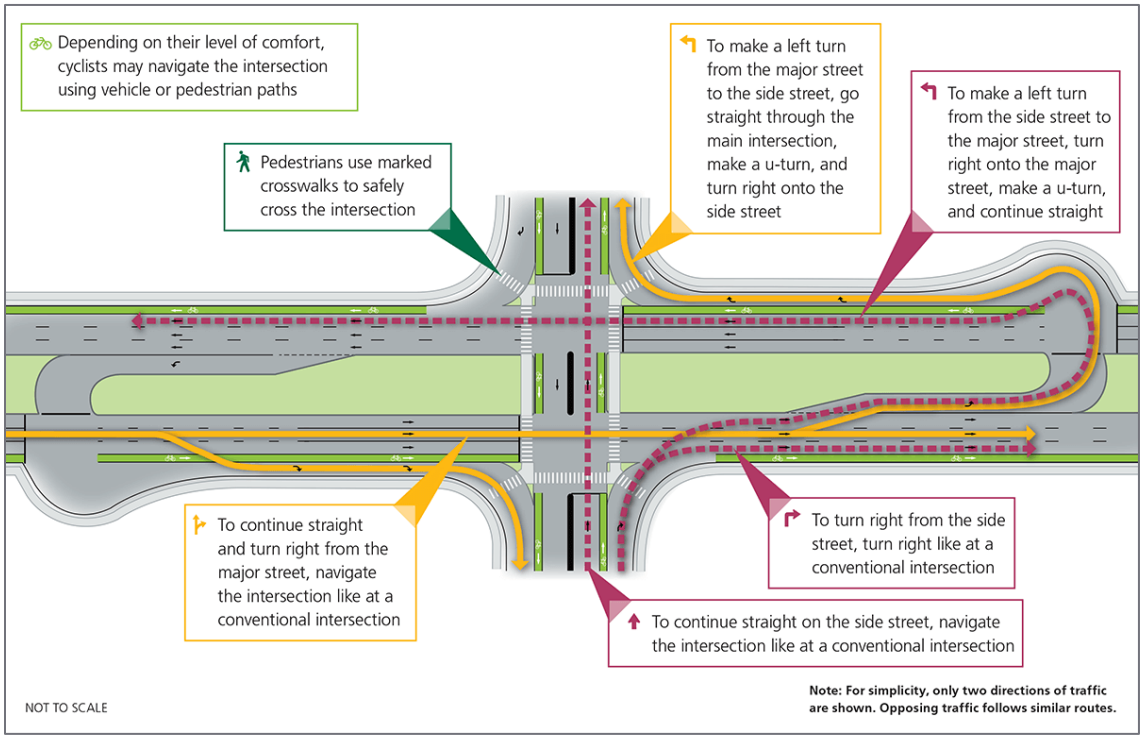

Figure 31. Example of how to navigate a MUT (median u-turn) (Source: VDOT)

Roundabouts **–** Roundabouts replace traditional intersections with circular layouts to reduce vehicle speeds, limit conflict points, improve traffic flow, shorten crossing distances for pedestrians, and increase safety by reducing frontal impact crashes. Roundabouts can be constructed with a single-lane or multi-lane configuration. Multi-lane roundabouts provide some of the same benefits as single-lane roundabouts and have more capacity for traffic; however, conflict points are increased with the additional lane. A conventional intersection has 32 conflict points compared to a roundabout that has 8 conflict points.

Roundabouts are a proven countermeasure by the FHWA, and converting a signalized intersection to a roundabout is noted to reduce fatal and injury crashes by 78%. This improvement is listed in the CMF Clearinghouse as countermeasure ID 226. This countermeasure aligns with the SSA objective of safer roads and generally has a mid to long time frame to implement and has a mid-high associated cost.

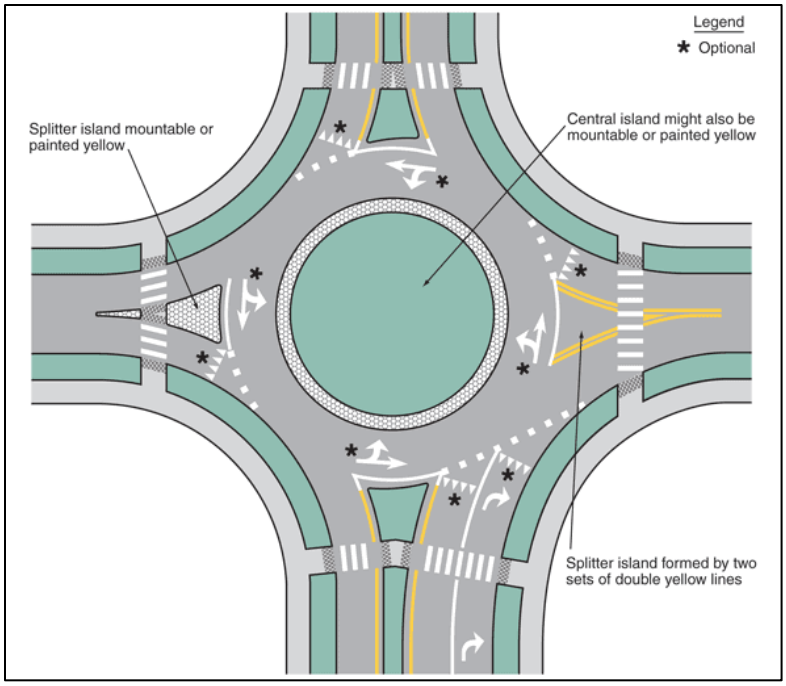

Figure 32. Typical layout of a one-lane roundabout (Source: FHWA)

Activated Advanced Warning Flashers For Signal – Installing an active advanced warning flasher for an existing signal at locations prone to rear-end crashes or red-light running can be a valuable countermeasure, especially at signals with low approach sight distance. An active advanced warning flasher utilizes flashing lights to alert drivers to an upcoming signal, giving them time to slow down and prepare to stop.

This improvement is noted to reduce crashes by 18% and is listed in the CMF Clearinghouse as countermeasure ID 4201. This countermeasure aligns with the Safe SSA objective of safer roads and generally has a short time frame to implement and has a low-mid associated cost.

Figure 33. Example of an activated advanced warning flasher (Source: NCDOT)

Prohibit Right Turns On Red (RTOR) – Prohibition of Right Turns On Red can aid in reducing pedestrian crashes involving right-turning vehicles, crashes related to limited sight distance, and right-turning rear-end crashes. Locations where sideswipe, merging, and weaving-related conflicts are evident could benefit from prohibiting right turns on red. This prohibition also has the flexibility to restrict this movement for certain times of the day when higher right-turn volumes exist.

While there are no published studies or viable CMFs available for this improvement, Prohibiting Right Turns On Red is a noted "tried" strategy by the National Academies Press, "*A Guide for Reducing Collisions at Signalized Intersections, 2004."*[6]. An important element of "Tried" strategies is, they give a general assurance that there is not likely to be a negative impact on safety and more likely a positive one. The NCDOT conducted a subjective evaluation of RTOR and found an expected crash reduction of 25%[7]. Although this evaluation was not from a comprehensive study, it displays several characteristics of a potentially effective strategy if implemented at the appropriate locations. This countermeasure aligns with the Safe SSA objective of safer roads and generally has a short time frame to implement and has a low-mid associated cost.

Figure 34. Example of prohibiting right turns on red, in Arlington, VA (Source: Google Maps)

Protected Only Left Turns – Protected left-turn phases improve left-turn safety due to the decrease in potential conflicts between left-turning and opposing through vehicles. This strategy reduces the frequency and severity of angle collisions associated with left-turn maneuvers. Additionally, a properly timed protected left-turn phase can also help reduce rear-end and sideswipe crashes between left-turning vehicles and the through vehicles behind them.

This improvement is noted to reduce angle crashes by up to 99% and is listed in the CMF Clearinghouse as countermeasure ID 339. This countermeasure aligns with the Safe SSA objective of safer roads and generally has a short to mid time frame to implement and has a low to mid associated cost.

[7] https://connect.ncdot.gov/resources/safety/TrafficSafetyResources/NCDOT%20CRF%20Update.pdf

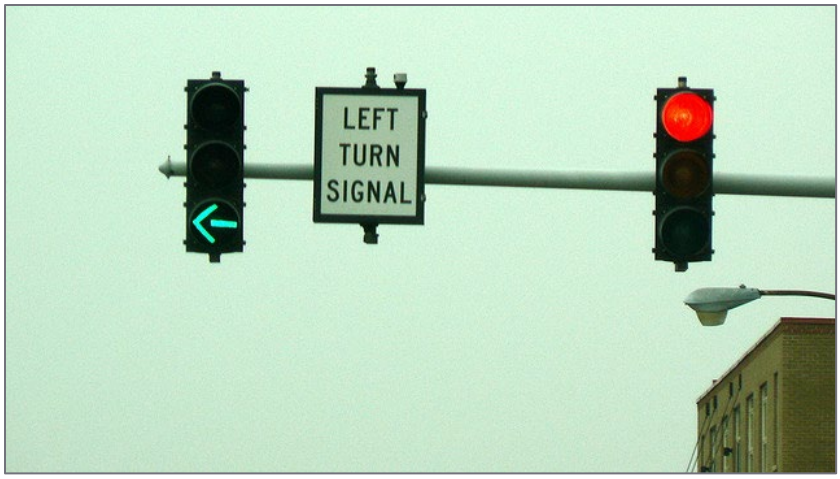

Figure 35. Example of a protected left turn signal phase (Source: FHWA-PEDSAFE)

Dynamic All Red Extension – A dynamic all-red extension (DARE) is a unique countermeasure that intends to reduce the potential for crashes during red light running. The system works by detecting the potential for red light running events and stopping the signal timing events in the "all red" phase to provide time for the offending vehicle to clear the intersection before the cross street receives a green indication.

This improvement is noted to reduce red light running crashes by 32% and is listed in the CMF Clearinghouse as countermeasure ID 11228. This countermeasure aligns with the Safe SSA objective of safer roads and generally has a short time frame to implement and has a low associated cost.

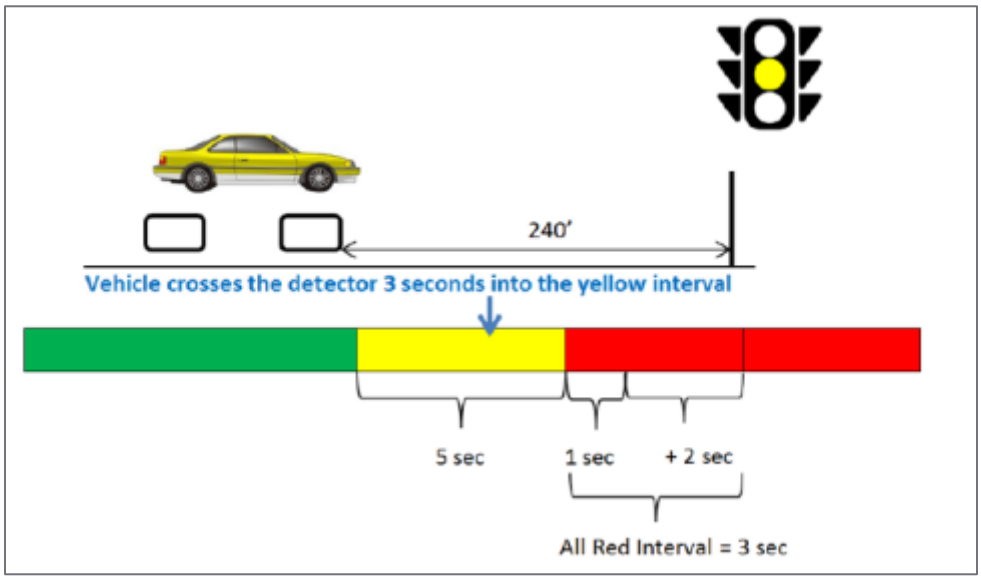

Figure 36. Example of Dynamic All Red Extension using inductive loops. With this case the ALL RED is 3 seconds for the cycle. (Source: NCDOT)

Offset Left Turn Lanes – Installation of offset left turn lanes involves shifting the left turn lanes outward from the centerline of the road, creating a position that allows left-turning drivers to have a less obstructed view of oncoming traffic. Shifting these lanes outward creates positive offset turn lanes, which reduces this visual obstruction, improving sight distance, and reducing the likelihood of conflicts and severe crashes.

This improvement is noted to reduce crashes by 36% and is listed in the CMF Clearinghouse as countermeasure ID 6096. This countermeasure aligns with the Safe SSA objective of safer roads and generally has a short time frame to implement and has a low-mid associated cost.

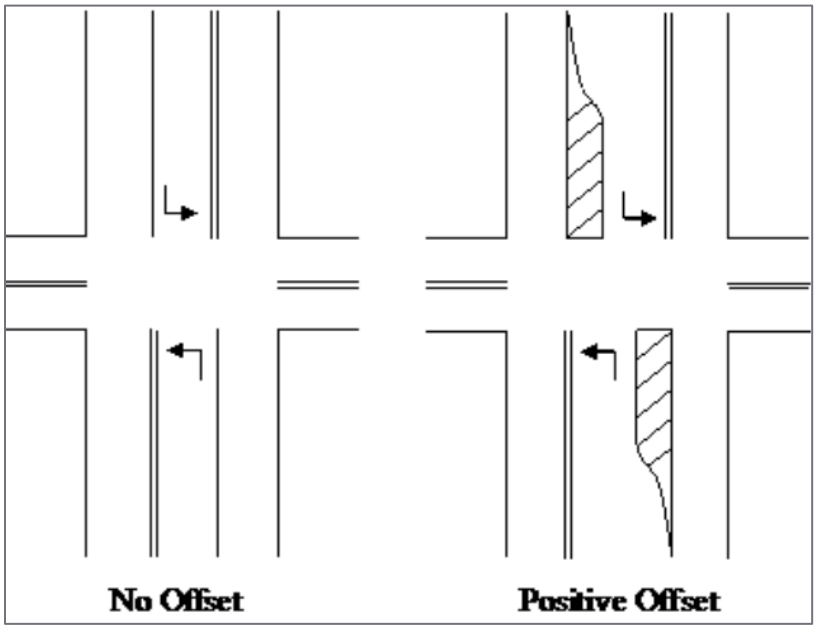

Figure 37. Example of offset left turn lanes (Source: FHWA)

Curb Extension/Bulb Out – Curb extensions and bulb-outs shorten crossing distances, improve visibility, and increase pedestrian comfort at intersections. These safety enhancements can be implemented at mid-block and intersection locations.

While there is no viable CMF available for this improvement, several case studies[8] have been done with great success of reducing the frequency and severity of pedestrian and bicycle-related crashes. Pairing this countermeasure with other pedestrian/bicycle improvements (ex., crosswalk enhancement, lighting, ped signals, etc.) further reduces the potential for vulnerable road user crashes. This countermeasure aligns with the Safe SSA objectives of safer people and safer roads. The improvements generally have a short to mid time frame to implement and have a low to mid associated cost.

[8] http://www.pedbikesafe.org/pedsafe/countermeasures_detail.cfm?CM_NUM=5

Figure 38. Example of a curb extension/bulb out in NC (Source: NCDOT)

Appropriate Speed Limit – Appropriate Speed Limit for all road users is reducing speeds, particularly on non-limited access roadways where vehicles and vulnerable road users mix. Addressing speed is fundamental to the Safe System Approach to making streets safer, and a growing body of research shows that speed limit changes alone can lead to measurable declines in speeds and crashes.

Based on international experience and implementation in the United States, the use of 20 mph speed zones[9] or speed limits in urban core areas where vulnerable users share the road environment with motorists may result in further safety benefits. Several studies have been conducted regarding the reduction of speed limits where appropriate. A notable case study[10] in Seattle, WA revealed that setting speed limits on all non-arterial streets at 20 mph and 200 miles of arterial streets at 25 mph reduced fatal crashes by 26%. This countermeasure aligns with the Safe SSA objective of safer speeds and generally has a short time frame to implement and has a low associated cost.

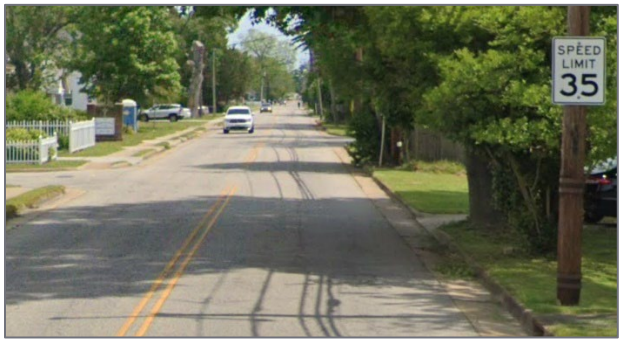

Figure 39. Example of a posted speed limit on a collector roadway in Hampton, VA (Source: Google Maps)

The matrix below compiles the locations to consider for potential "hot spot"/site-specific improvements, along with the corresponding Safe System Approach objective and noteworthy crash history statistics. Many of the following locations would benefit from the wide-ranging improvements listed in the **Systemic Improvements** section. Additionally, these site-specific countermeasures can complement those systemic improvements to further enhance traffic safety. The crash history includes reported crashes occurring within the jurisdiction of the City of Hampton, from January 1, 2017, to February 28, 2025. This 8-year, 2-month time frame represents the latest crash data available at the time of study.

Table 10. Potential Improvements for the City of Hampton

Locations to Consider	Potential Improvements {Crash Reduction}	Safe System Approach Objective	Total Crashes	Fatal Crashes	Severe Crashes	Prominent Crash Types	Other Key Stats

Policy Strategy (Non-Engineering) Improvements

The improvements listed in this section are non-engineering-based strategies that intend to change human behavior in some way. These are effective, science-based traffic safety countermeasures to address highway safety problems.

Education and Training Programs – There are many traffic safety education and training initiatives available that target particular user groups or aim to inform and correct behaviors that negatively impact the safety of all road users. These programs align with the Safe System Approach (SSA) objective of safer people. Two of these education and training programs to be utilized are listed below.

- ***Young Drivers*** – Education and training programs are aimed at informing new road users about safe driving practices to improve overall road safety. Graduated Driver Licensing (GDL) programs are focused on easing beginning drivers into traffic scenarios by gradually exposing them to greater driving skills. Education programs with youth can be coordinated with enforcement activities.
- ***Senior Drivers*** – As drivers age, their physical and mental abilities, driving behaviors, and crash risks all change, though age alone does not determine driving performance. Many features of the current system of roads, traffic signals and controls, laws, licensing practices, and vehicles were not designed to accommodate older drivers. For older drivers, it is proven that on-road driving is improved when classroom-based training is paired with individualized feedback. Education programs with senior drivers can be coordinated with enforcement activities.

Speed Enforcement Programs – Targeted conventional speed enforcement programs focus law enforcement efforts on areas with high incidents of speeding to deter unsafe driving behaviors. Community education programs can support awareness of speeding problems and alert the public to roads where enforcement will be focused. Speed Enforcement Programs align with the SSA objective of safer speeds.

Alcohol Problem Assessment and Treatment Programs – Alcohol problem assessment can take many forms, from a brief paper-and-pencil questionnaire to a detailed interview with a treatment professional. Alcohol treatment can be even more varied, ranging from classroom alcohol education programs to long-term inpatient facilities. Alcohol emphasis programs align with the SSA objective of safer people.

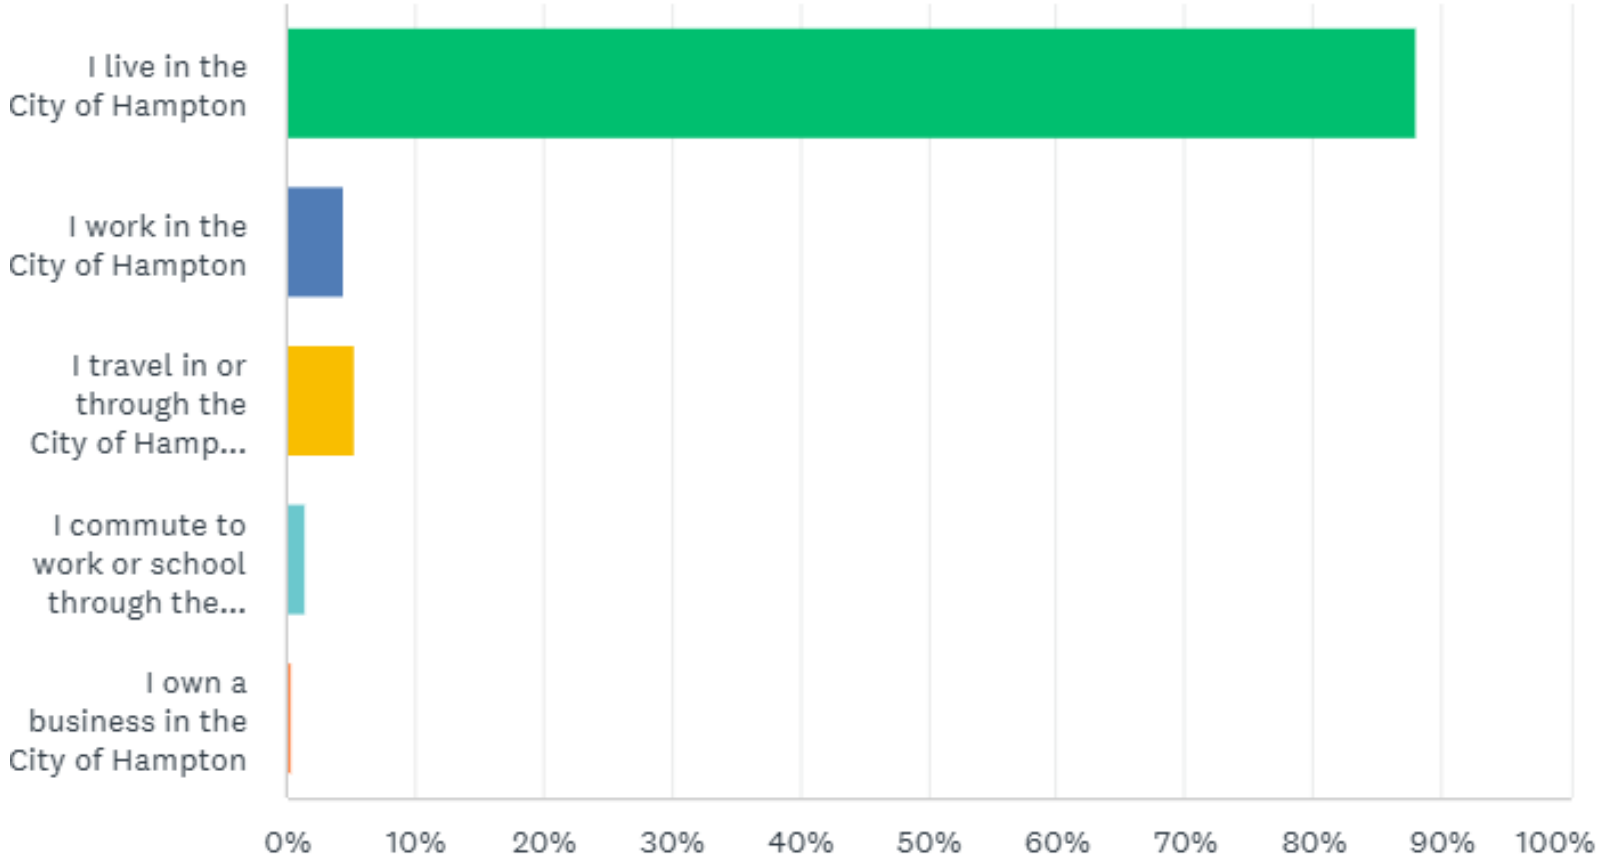
Safe Routes to School Programs – Safe Routes to School programs encourage and enable safer walking and biking routes for students by promoting physical activity, creating awareness in the community, reducing congestion around schools, and enhancing safety for students. Safe Routes to School Programs align with the SSA objective of safer people.

Road Safety Audit (RSA) – RSAs are a detailed look into a specific intersection or corridor by an independent, multidisciplinary team to identify and report on potential road safety issues. RSAs can be considered at High Injury Network (HIN) locations and at any phase of project development, from planning through construction, where further study is needed from various viewpoints. RSAs align with the SSA objective of safer roads.

Appendix A

Public Outreach

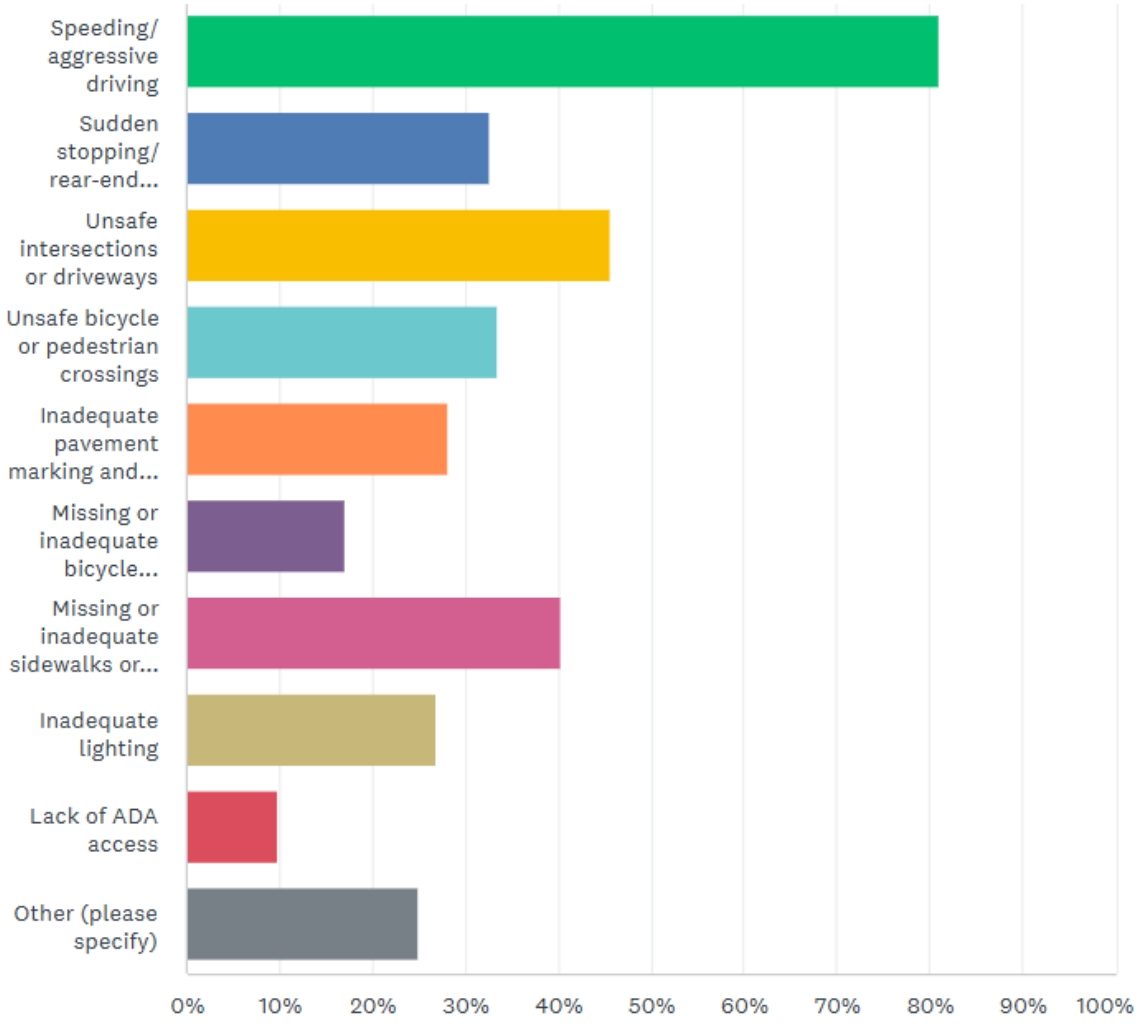
What is your primary relationship to the City of Hampton?



Answer Choices	Responses
I live in the City of Hampton	88.13% (609)
I work in the City of Hampton	4.49% (31)
I travel in or through the City of Hampton to run errands, attend events, or do other non-work-related activities	5.35% (37)
I commute to work or school through the City of Hampton	1.59% (11)
I own a business in the City of Hampton	0.43% (3)
Total	691*

**Note: There were 694 total survey responses, however, not all respondents answered every question.*

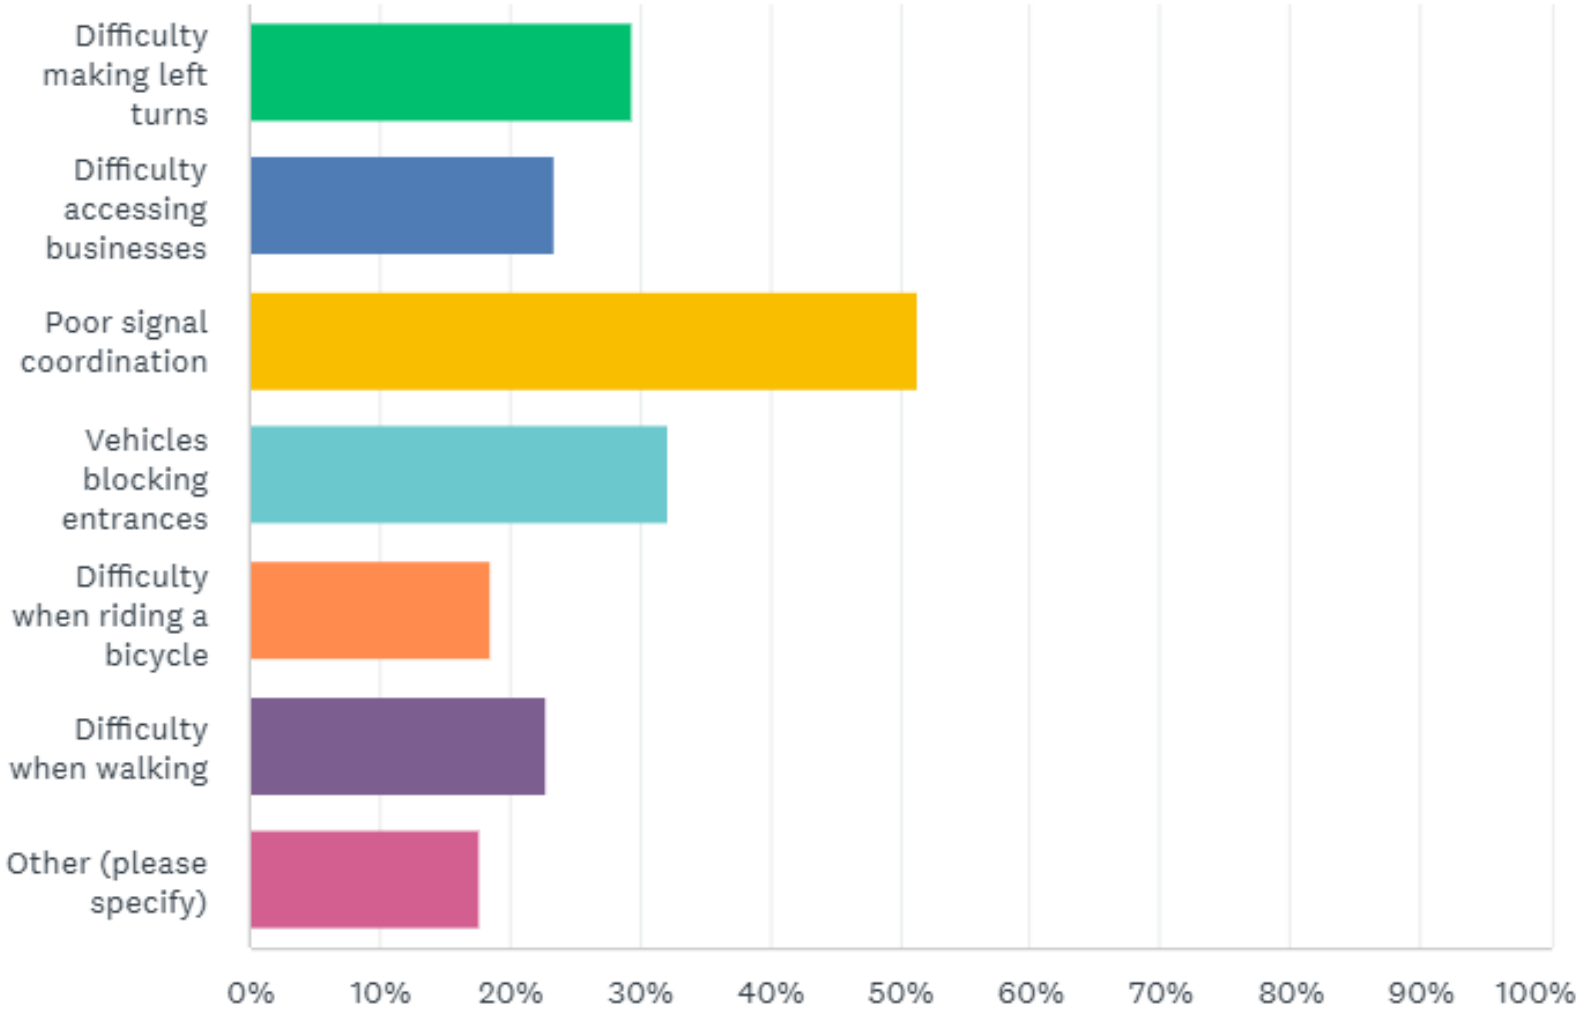
What safety issues concern you in the city of Hampton? (Check all that apply)



**Note: There were 694 total survey responses, however, not all respondents answered every question.*

Answer Choices	Responses
Speeding/aggressive driving	81.01% (563)
Sudden stopping/ read-end crashes	32.52% (226)
Unsafe intersections or driveways	45.61% (317)
Unsafe bicycle or pedestrian crossings	33.38% (232)
Inadequate pavement marking and signage	28.06% (195)
Missing or inadequate bicycle facilities	17.12% (119)
Missing or inadequate sidewalks or curbs	40.29% (280)
Inadequate lighting	26.76% (186)
Lack of ADA access	9.78% (68)
Other	25.04% (174)
Total	694*

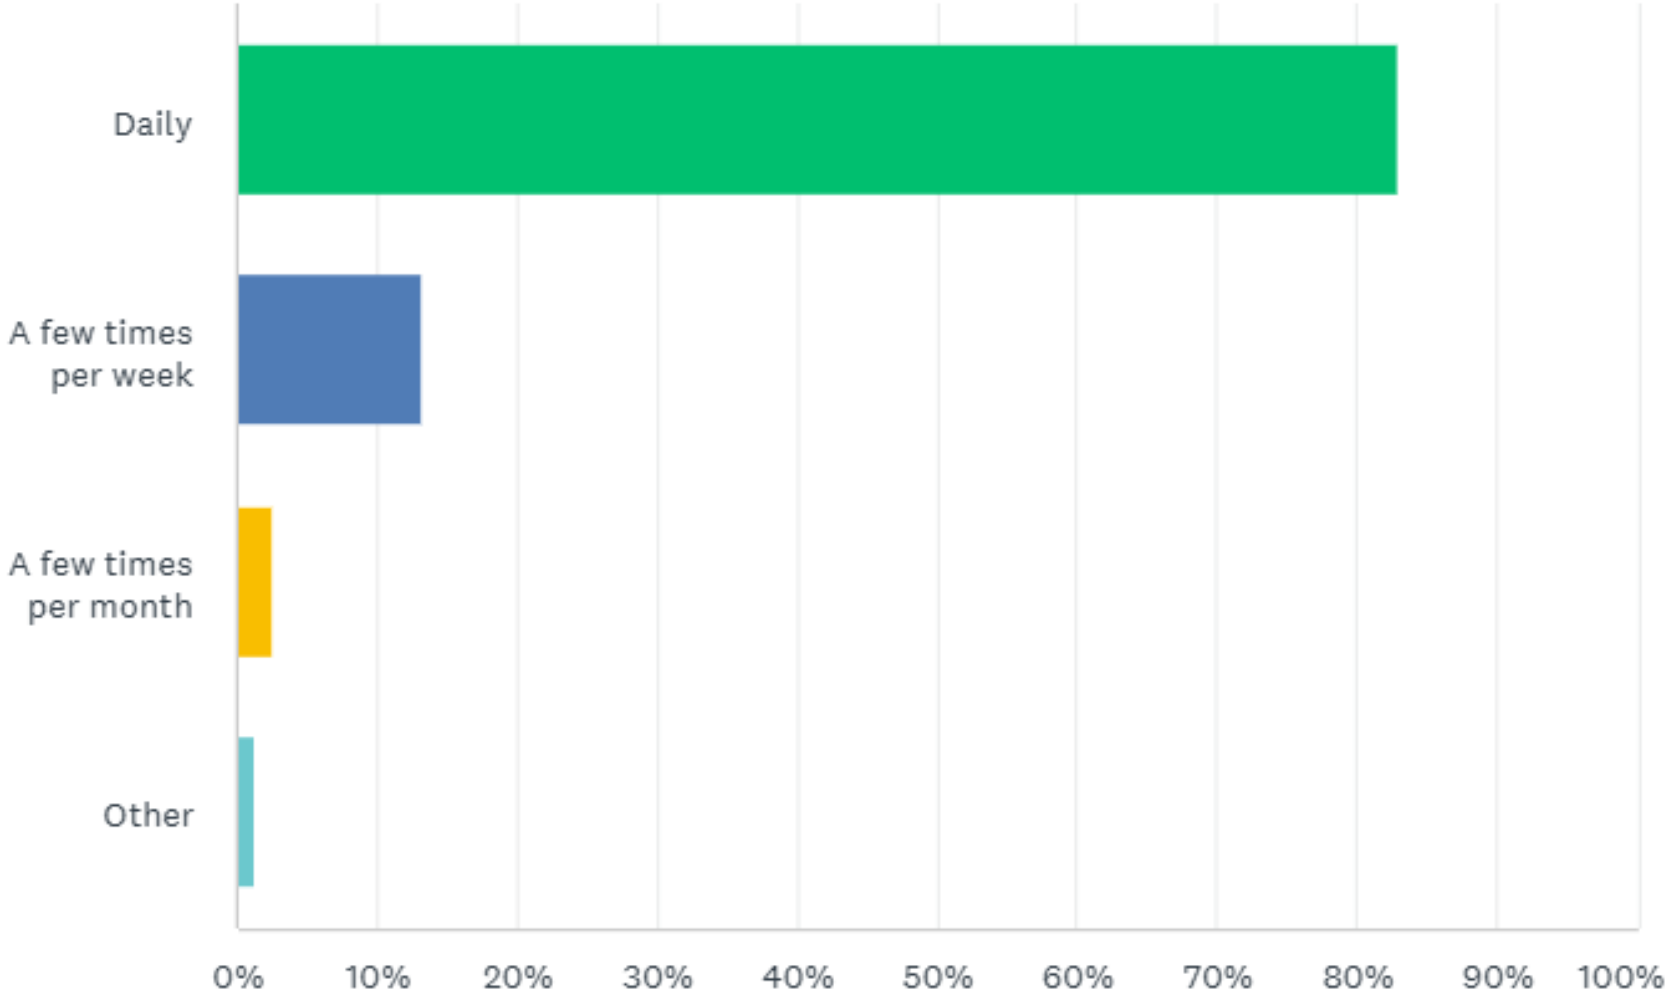
What mobility issues do you typically experience when traveling in the City of Hampton? (Check all that apply)



Answer Choices	Responses
Difficulty making left turns	29.35% (172)
Difficulty accessing businesses	23.38% (137)
Poor signal coordination	51.37% (301)
Vehicles blocking entrances	32.25% (189)
Difficulty when riding a bicycle	18.60% (109)
Difficulty when walking	22.87% (134)
Other	17.75% (104)
Total	586*

**Note: There were 694 total survey responses, however, not all respondents answered every question.*

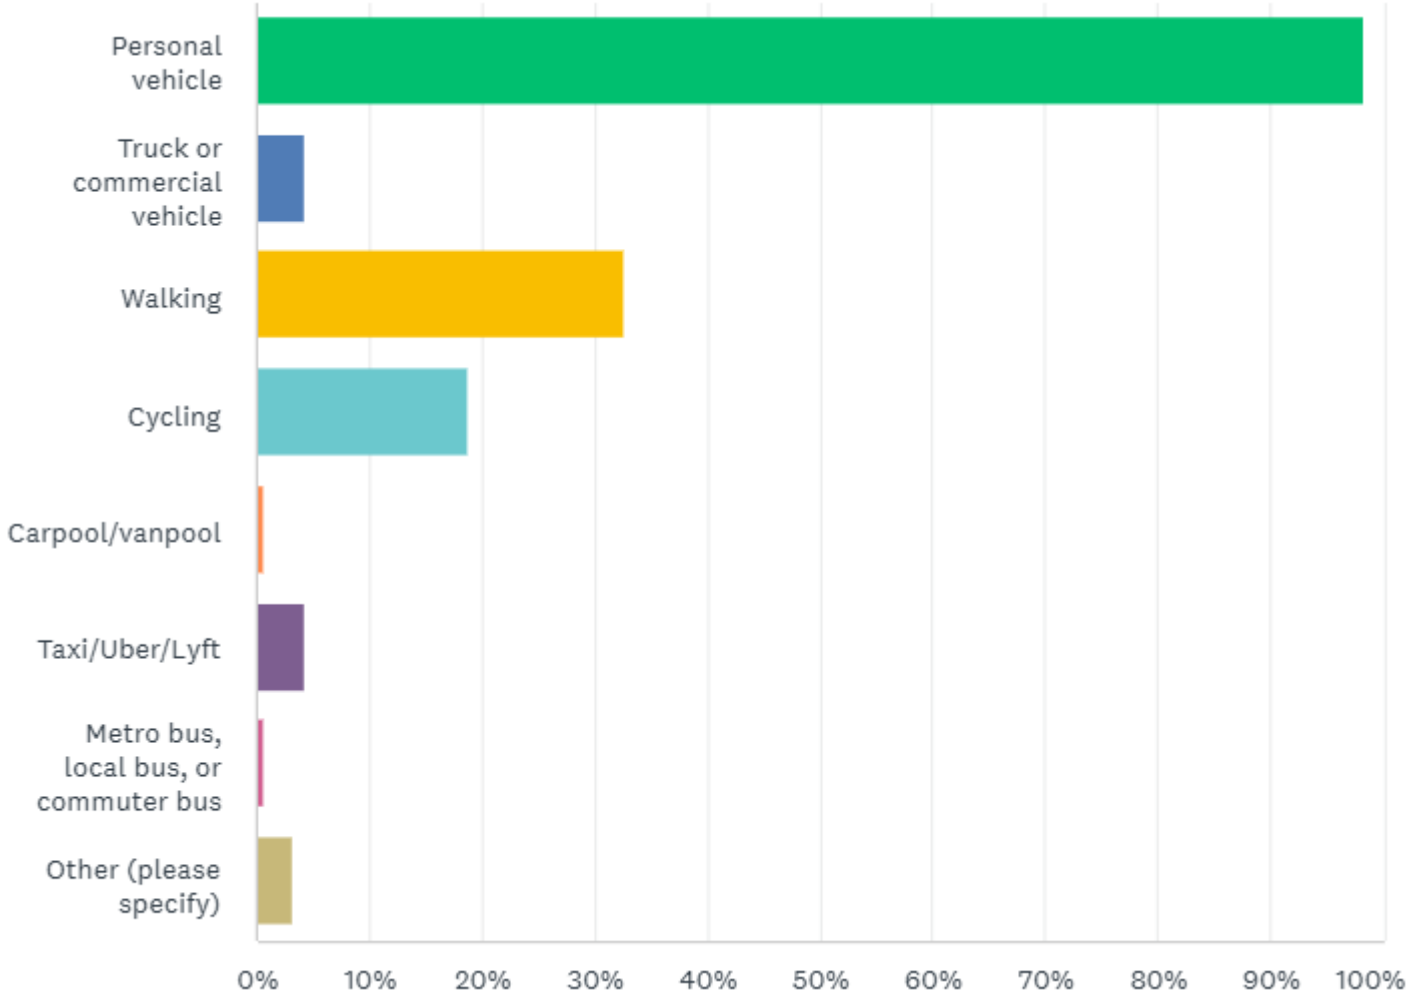
How often do you drive within the City of Hampton?



Answer Choices	Responses
Daily	82.92% (573)
A few times per week	13.17% (91)
A few times per month	2.60% (18)
Other	1.30% (9)
Total	691*

**Note: There were 694 total survey responses, however, not all respondents answered every question.*

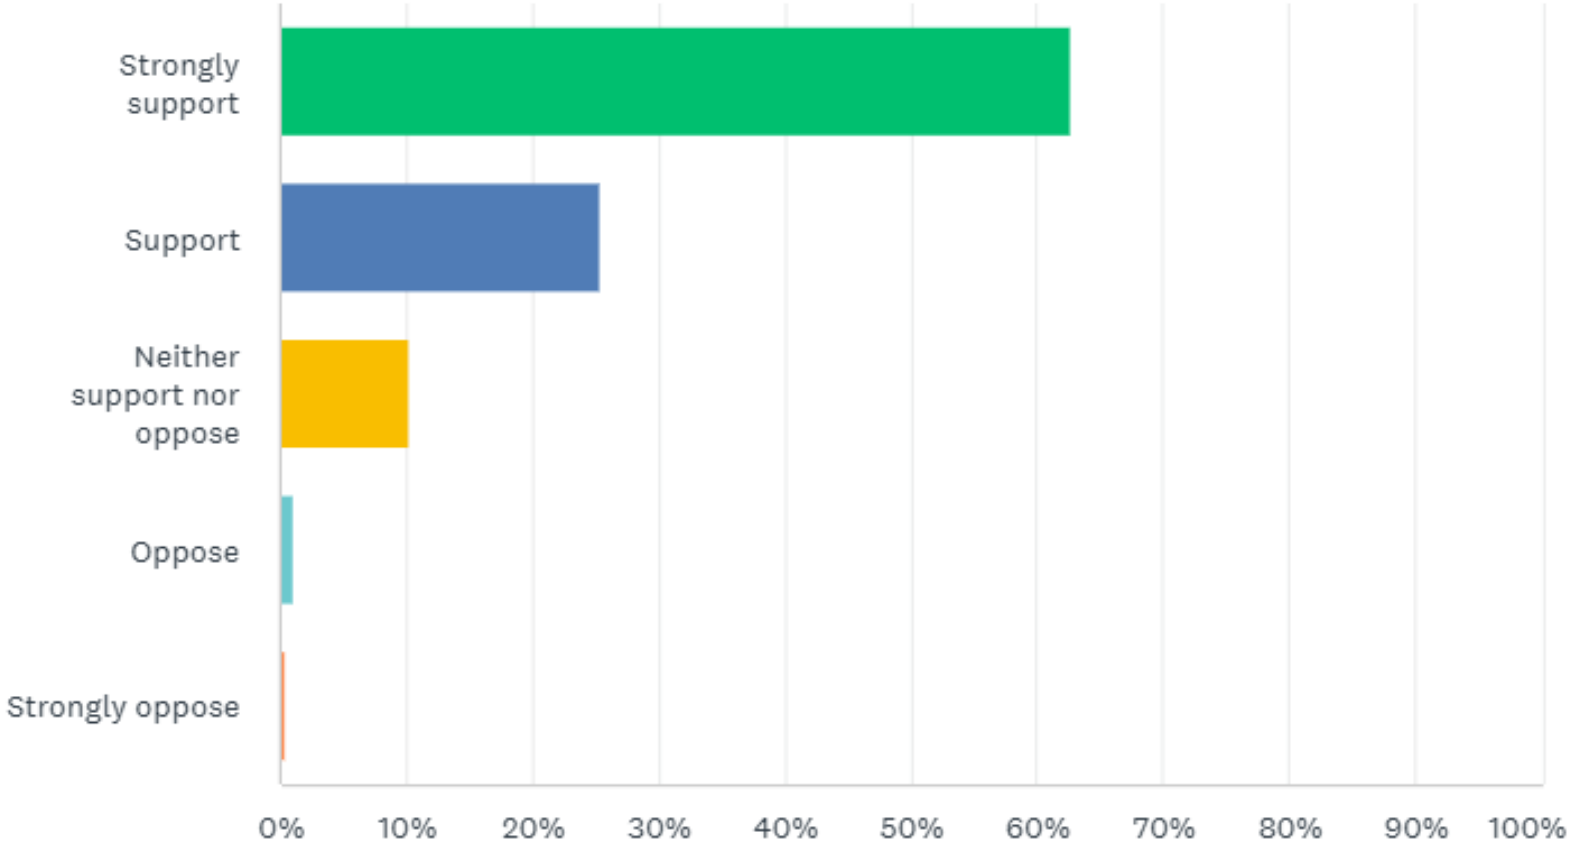
What mode of travel do you use when traveling within the City of Hampton? (Check all that apply)



Answer Choices	Responses
Personal vehicle	98.36% (661)
Truck or commercial vehicle	4.32% (29)
Walking	32.59% (219)
Cycling	18.75% (126)
Carpool/vanpool	0.74% (5)
Taxi/Uber/Lyft	4.32% (29)
Metro bus, local bus, or commuter bus	0.74% (5)
Other	3.13% (21)
Total	672*

**Note: There were 694 total survey responses, however, not all respondents answered every question.*

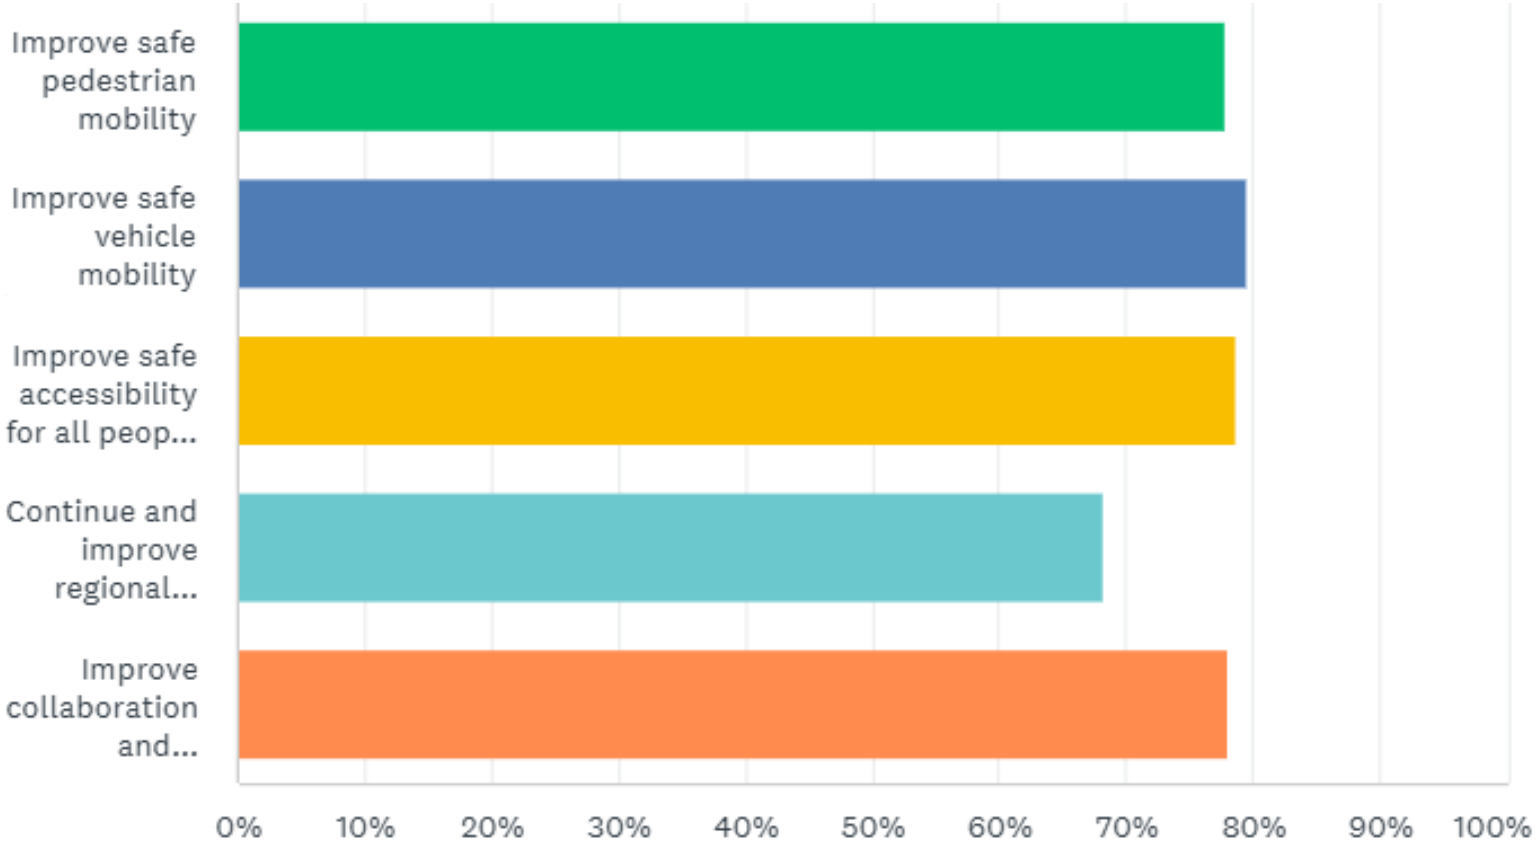
The City of Hampton has developed the following vision statement for its Vision Zero Safety Action Plan: “The City of Hampton wants to ensure safe movement on all travel modes for all residents and visitors traveling on the transportation network. To achieve this, the City of Hampton will foster a culture of road safety within our community, recognizing that any traffic fatality or injury is unacceptable.” Do you support this statement?



Answer Choices	Responses
Strongly support	62.72% (429)
Support	25.44% (174)
Neither support nor oppose	10.23% (70)
Oppose	1.17% (8)
Strongly oppose	0.44% (3)
Total	684*

**Note: There were 694 total survey responses, however, not all respondents answered every question.*

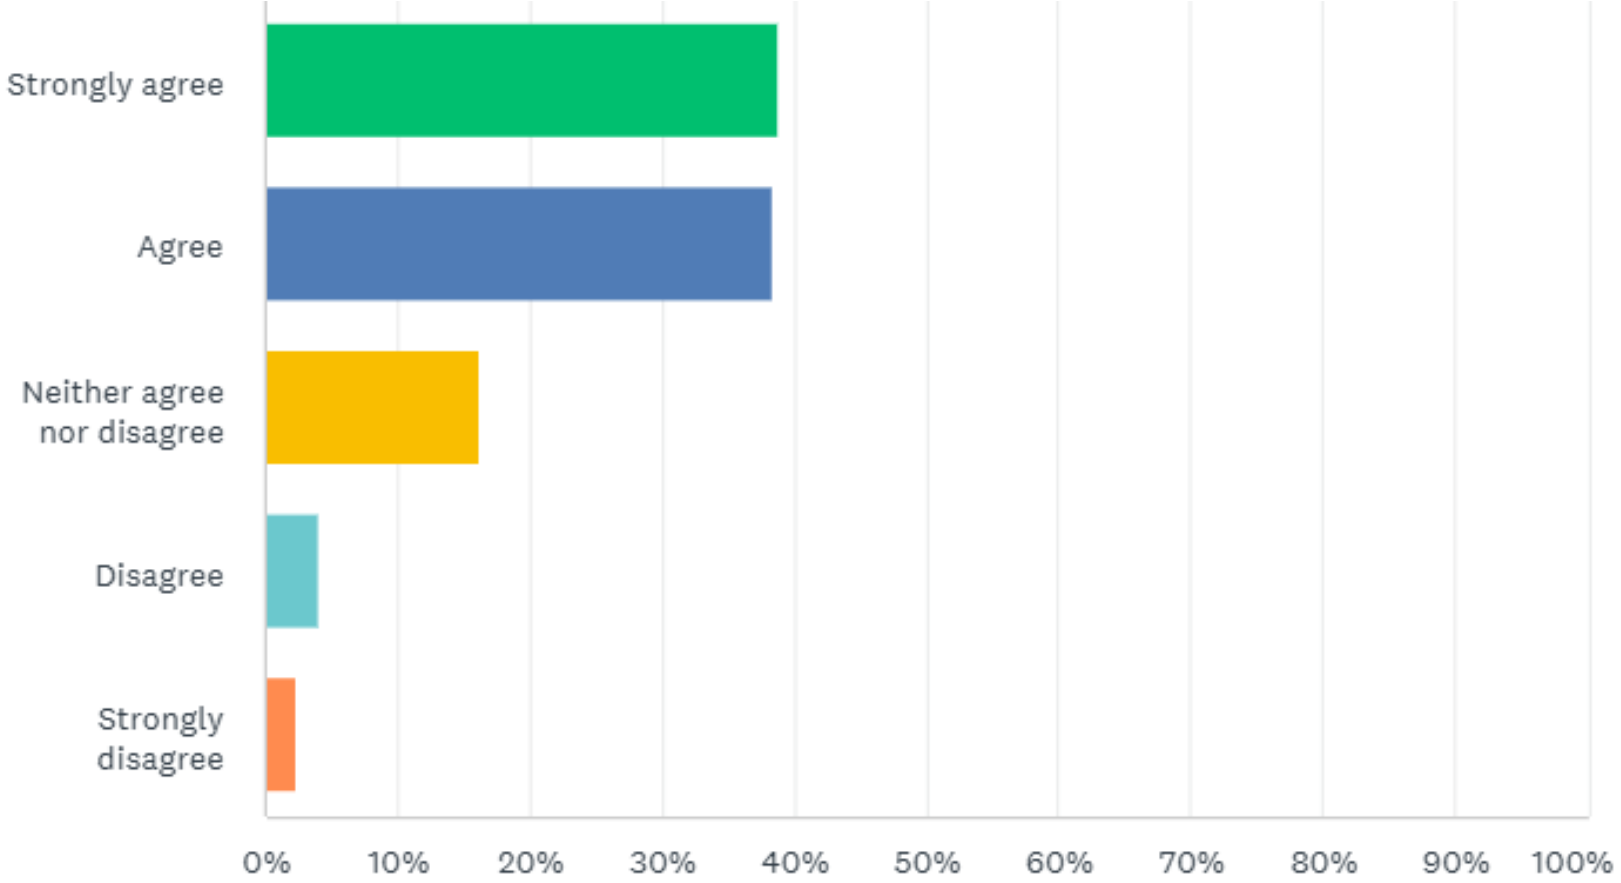
The following goals for the City of Hampton Vision Zero Safety Action Plan have been identified. Do you agree with these goals? (Check all that apply)



Answer Choices	Responses
Improve safe pedestrian mobility	77.85% (513)
Improve safe vehicle mobility	79.51% (524)
Improve safe accessibility for all people regardless of mode across the transportation network	78.76% (519)
Continue and improve regional collaboration on traffic safety initiatives	68.13% (449)
Improve collaboration and coordination with residents on traffic safety initiatives	78.00% (514)
Total	659*

**Note: There were 694 total survey responses, however, not all respondents answered every question.*

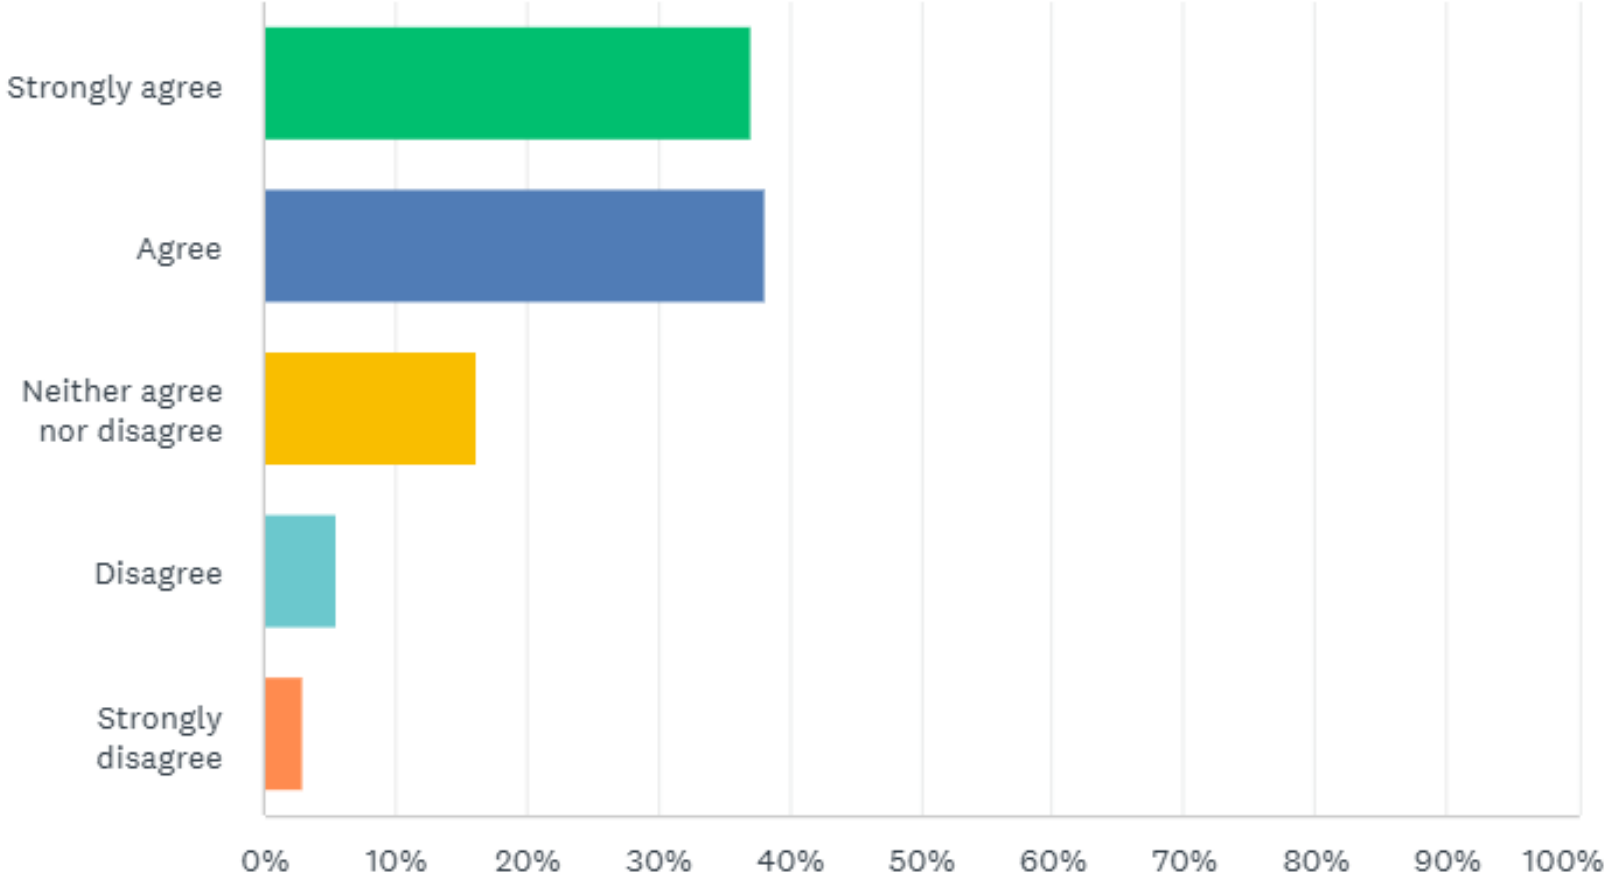
The goal to improve safe pedestrian mobility has the following objectives: Reduce pedestrian-related traffic fatalities by half over the following five years from the plan's adoption Elimination of pedestrian fatalities within 10 years of adoption of the plan Reduce pedestrian serious injuries by a third over the following five years from adoption of the plan Further reduction of pedestrian serious injuries by 50 percent over the following 10 years after the adoption of the plan How much do you agree that the objectives described for this goal are feasible and will help the City of Hampton to achieve its safety goals?



Answer Choices	Responses
Strongly agree	38.86% (267)
Agree	38.43% (264)
Neither agree nor disagree	16.30% (112)
Disagree	4.08% (28)
Strongly disagree	2.33% (16)
Total	687*

**Note: There were 694 total survey responses, however, not all respondents answered every question.*

The goal to improve safe vehicle mobility was assigned the following objectives: Reduce vehicle-related traffic fatalities by half over the ten years following the plan's adoption Elimination of vehicle fatalities within 15 to 20 years of adoption of the plan Reduce vehicle-related crash serious injuries by a third over the 10 years following the plan's adoption Further reduction of vehicle-related crashes and serious injuries by 50 percent over the 15 years following the plan's adoption How much do you agree that the objectives described for this goal are feasible and will help the City of Hampton to achieve its safety goals?



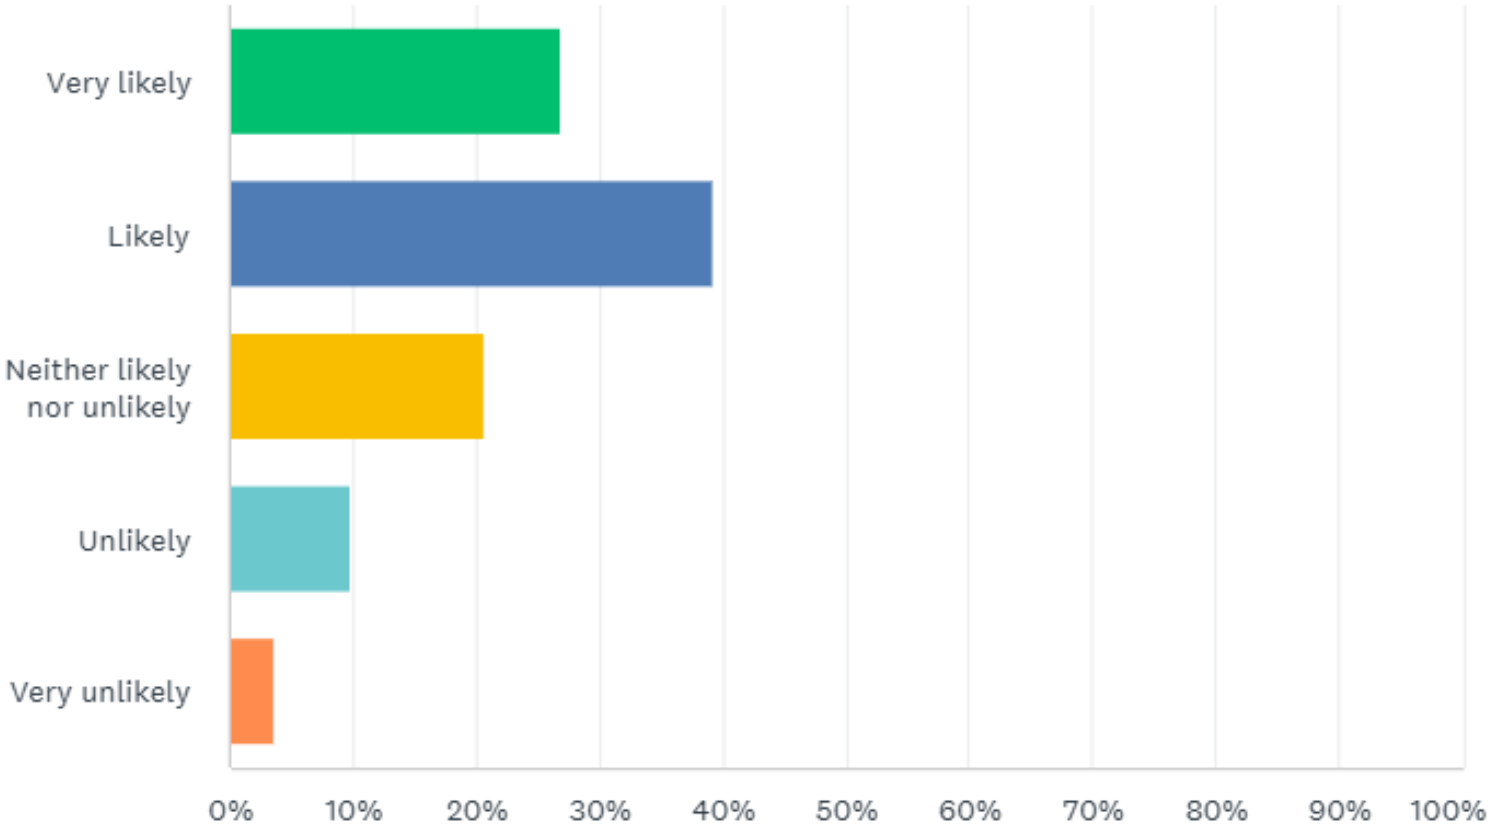
Answer Choices	Responses
Strongly agree	37.08% (254)
Agree	38.10% (261)
Neither agree nor disagree	16.20% (111)
Disagree	5.55% (38)
Strongly disagree	3.07% (21)
Total	685*

**Note: There were 694 total survey responses, however, not all respondents answered every question.*

This Vision Zero Safety Action Plan includes improving safety at bus stops and identifying gaps in the City of Hampton's non-motorized network. Are there bus stop safety issues or particular transit gaps which are of significant concern to you?

- No sidewalks along Greenbriar Avenue
- Areas along bus routes without adequate pedestrian walkways and crossings
- Aggressive drivers passing stopped buses
- No sidewalks along Mercury Blvd between Woodland and Fox Hill Rd
- Many bus stops without adequate lighting
- Bus stops without shelters
- Lack of bicycle lanes
- Lack of understanding of sharing road with bicycles
- Lack of safe connections between bike lanes/trails
- Bus stops with minimal space to wait safely
- No bus-specific pull-offs

Part of the Vision Zero Safety Action Plan is the creation of an interactive dashboard to track progress on transportation projects and highlight safety impacts. How likely are you to seek out and access this type of dashboard?



Answer Choices	Responses
Very likely	26.76% (182)
Likely	39.26% (267)
Neither likely nor unlikely	20.59% (140)
Unlikely	9.71% (66)
Very unlikely	3.68% (25)
Total	680*

**Note: There were 694 total survey responses, however, not all respondents answered every question.*

Appendix D

The Traffic Safety Recommendations Toolkit

Systemic Improvements	The systemic approach to safety involves widely implemented improvements based on high-risk roadway features correlated with specific severe crash types.							
Location(s)	**Countermeasure(s)**	**Description**	**Crash Reduction (Source)**	**Time Frame to Implement**	**Target Crashes**	**Cost**	**Safe System Approach Objective**	**General Traffic Safety Concerns**
High Injury Network Signalized Intersection Locations	**High-Visibility Signal Backplates (HVSB)** 	High-Visibility Signal Backplates (HVSBs) added to a traffic signal head improve visibility of the illuminated signal face through a controlled-contrast background.	15% (FHWA & VDOT Preferred CMF)	Short Term	ALL CRASHES	Low	Safer Roads	**•Of the High Injury Network Intersection Locations, 28% of crashes occurred at night.**
High Injury Network Locations	**Speed Safety Cameras** 	Speed Safety Cameras use speed measurement devices to detect speeding and capture photographic or video evidence of vehicles that are violating a set speed threshold.	47% to 54% (FHWA)	Short to Mid Term	ALL CRASHES (Speed Related)	Low-Mid	Safer Speeds	**•Hampton's Vision Zero Traffic Safety Survey indicated "speeding/aggressive driving" as the top safety issue of concern.**
	Dynamic Speed Feedback Signs 	Dynamic Speed Feedback Signs display current vehicle speeds to drivers, encouraging drivers to adjust speed to safe levels, deterring speeding, and encouraging behavioral change.	5% (VDOT Preferred CMF) & 46% (NCDOT CRF List)	Short Term		Low		
High Injury Network Signalized Intersection Locations	**Flashing Yellow Arrow (FYA)** 	Flashing Yellow Arrow (FYA) is a traffic signal indication for left turns that allows a driver to proceed when oncoming traffic is clear.	19% to 37% (VDOT Preferred CMF)	Short Term	Left Turn	Low	Safer Roads	

Location(s)	Countermeasure(s)	Description	Crash Reduction (Source)	Time Frame to Implement	Target Crashes	Cost	Safe System Approach Objective	General Traffic Safety Concerns
High Injury Network Crosswalk Locations	**Crosswalk Visibility Enhancements | FHWA** 	High-Visibility Crosswalks use patterns (i.e., bar pairs, continental, ladder) that are visible to both the driver and pedestrian from farther away compared to traditional transverse line crosswalks. Crosswalk Lighting is used to illuminate with positive contrast to make it easier for a driver to visually identify the pedestrian. Enhanced Signing and Pavement Markings are used to indicate where a driver should stop or yield to pedestrians.	25% to 42% (FHWA)	Short Term	Pedestrian/Bike	Low-Mid	Safer People, Safer Roads	**•Hampton's Vision Zero Traffic Safety Survey indicated "unsafe intersections or driveways" as the second most cited safety issue of concern.**
High Injury Network Locations	**Optimized Signal Timing** 	Optimizing Signal Timing is the adjustment of traffic signals based on the appropriate speed limit which can reduce congestion, improve traffic flow, and enhance safety by promoting safe speeds.	21% (CMF Clearinghouse #9868)	Short to Mid Term	ALL CRASHES	Low-Mid	Safer Roads, Safer Speeds, Post-Crash Care	**•Hampton's Vision Zero Traffic Safety Survey indicated "poor signal coordination" as the top mobility issue that is typically experienced when traveling in the City.**
High Injury Network Locations	**Sidewalks** 	Sidewalks are paved surfaces designated for pedestrian use parallel to the roadway, generally separated from the traffic lanes by a curb.	65% to 89% (FHWA)	Short to Mid Term	Pedestrian/Bike	Mid-High	Safer People	**•Hampton's Vision Zero Traffic Safety Survey indicated "missing or inadequate sidewalks or curbs" as the third most cited safety issue of concern.** **•Hampton's Vision Zero Traffic Safety Survey indicated a third of respondents use walking as their mode of travel within the City.**

Location(s)	Countermeasure(s)	Description	Crash Reduction (Source)	Time Frame to Implement	Target Crashes	Cost	Safe System Approach Objective	General Traffic Safety Concerns
High Injury Network Locations	**Lighting** **Safety Benefits:** **Lighting can reduce crashes up to:** **42%** for nighttime injury pedestrian crashes at intersections.[1] **33-38%** for nighttime crashes at rural and urban intersections.[2,1] **28%** for nighttime injury crashes on rural and urban highways.[1]	Lighting enhances visibility at intersections and along roadways to reduce nighttime crashes by illuminating potential hazards and increasing driver and pedestrian awareness.	28% to 42% (FHWA)	Mid to Long Term	Pedestrian/Bike, All Nighttime	Mid-High	Safer People, Safer Roads	
High Injury Network Crosswalk Locations	**Leading Pedestrian Interval (LPI)** **Safety Benefits:** **13%** reduction in pedestrian-vehicle crashes at intersections.[2]	Leading Pedestrian Interval (LPI) gives pedestrians the opportunity to enter the crosswalk at an intersection 3-7 seconds before vehicles are given a green indication. Pedestrians can better establish their presence in the crosswalk before vehicles have priority to turn right or left.	13% (FHWA)	Short to Mid Term	Pedestrian	Low-Mid	Safer People	

Policy Strategy (Non-Engineering) Improvements				
Program	**Emphasis Area**	**Safe System Approach Objective**	**Description**	**Source**
Education and Training	Young Drivers	Safer People	Education and training programs are aimed at informing new road users about safe driving practices to improve overall road safety.	Young Drivers | NHTSA
	Senior Drivers	Safer People	As drivers age, their physical and mental abilities, driving behaviors, and crash risks all change, though age alone does not determine driving performance. Many features of the current system of roads, traffic signals and controls, laws, licensing practices, and vehicles were not designed to accommodate older drivers.	Older Drivers | NHTSA
Speed Enforcement	Speeding	Safer Speeds	Targeted conventional speed enforcement programs focus law enforcement efforts to areas with high incidents of speeding to deter unsafe driving behaviors. Community education programs can support awareness of speeding problems and alert the public of roads where enforcement will be focused.	A Guide for Reducing Speeding Related Crashes | NCHRP
Alcohol Problem Assessment and Treatment	Alcohol-Imparied Driving	Safer People	Alcohol problem assessment can take many forms, from a brief paper-and-pencil questionnaire to a detailed interview with a treatment professional. Alcohol treatment can be even more varied, ranging from classroom alcohol education programs to long-term inpatient facilities.	Alcohol Problem Assessment and Treatment | NHTSA
Safe Routes to School	School Age Children	Safer People	Safe Routes to School programs encourage and enable safer walking and biking routes for students by promoting physical activity, creating awareness to the community, reducing congestion around schools, and enhancing safety for students.	Safe Routes to School | NHTSA
Road Safey Audits	High Injury Network Locations	Safer Roads	Detailed look into specific intersection or corridor by independent, multidisciplinary team to identify and report on potential road safety issues.	Road Safety Audits (RSA) | FHWA
